

Network Device iTC

Newsletter – August 2014

Summary

This newsletter provides an update on the progress of the Network Device iTC, which is developing the next iteration of the set of network related cPPS.

The iTC currently consists of over 50 people, with representatives from CC Schemes (including USA, UK, Turkey, Australia, Norway, Korea and Japan), vendors, labs and consultants.

The iTC can be contacted on NDFW@ccdbinfo.org or, for iTC members, on OnlyOffice (formerly known as TeamLab) at: <https://ccusersforum.onlyoffice.com/products/projects/tasks.aspx?prjID=455640#sortBy=deadline&sortOrder=ascending>

Stop Press!

Breaking news is that the iTC Terms of Reference (ToRs) have just been submitted to the CCRA committees for review, to ensure that they meet World Trade Organisation principles and are fair to all stakeholders (for those of you who are interested this is around Box 12 of the 31 box model).

We are planning for approval in time for the ICCC in September.

Recent Activity

Over recent weeks the iTC has:

- Studied and agreed to the Essential Security Requirements (ESRs) for Network Devices and for Firewall (boxes 5 – 8/31)
- Created a work breakdown (box 13/31)
- Drafted and reviewed the Security Problem Definition (SPD – box 14/31)

We are currently:

- About to publish the updated SPD
- Arranging a call so that the iTC can review the draft Security Requirements
- Waiting to receive the crypto requirements from other iTCs so that we can establish relevance to this iTC
