Assurance Continuity Maintenance Report

BSI-DSZ-CC-0337-2005-MA-01

**Infineon Smart Card IC (Security Controller)
SLE66CLX320P/m1559-b22 and
SLE66CLX321P/m1359-b22
both with RSA2048 V1.3 and specific IC
Dedicated Software**

from

Infineon Technologies AG

Common Criteria Arrangement
for components up to EAL4

The IT product identified in this report was assessed according to the *Assurance Continuity: CCRA Requirements*, version 1.0, February 2004 and the developers Impact Analysis Report (IAR). The baseline for this assessment was the Certification Report, the Security Target and the Evaluation Technical Report of the product certified by the Federal Office for Information Security (BSI) under BSI-DSZ-CC-0337-2005.

The change to the certified product is at the level of the implementation for the RF interface, a change that has no effect on assurance. The identification of the maintained product is indicated by a new design version number compared to the certified product.

Consideration of the nature of the change leads to the conclusion that it is classified as a minor change and that certificate maintenance is the correct path to continuity of assurance.

Therefore, the assurance as outlined in the Certification Report BSI-DSZ-CC-0337-2005 is maintained for this version of the product. Details can be found on the following pages.

This report is an addendum to the Certification Report BSI-DSZ-CC-0337-2005.

Bonn, February 06th, 2005

Assessment

The IT product identified in this report was assessed according to the *Assurance Continuity: CCRA Requirements* [1] and the Impact Analysis Report (IAR) [2]. The baseline for this assessment was the Certification Report of the certified TOE [3], the Security Target [4] and the Evaluation Technical Report as outlined in [3].

The vendor for the Infineon Smart Card IC (Security Controller) SLE66CLX320P/m1559-b22 and SLE66CLX321P/m1359-b22 both with RSA2048 V1.3 and specific IC Dedicated Software, Infineon Technologies AG, submitted an IAR [2] to the BSI for approval. The IAR is intended to satisfy requirements outlined in the document *Assurance Continuity: CCRA Requirements* [1]. In accordance with those requirements, the IAR describes the changes made to the certified TOE, the evidence updated as a result of the changes and the security impact of the changes.

The SLE66CLX320P/m1559-b22 and SLE66CLX321P/m1359-b22 were changed due to timing improvements and improvement of the behaviour under extreme conditions. The change is not significant from the standpoint of security, however Configuration Management procedures required a change in the design version number from SLE66CLX320P/m1559-b19 and SLE66CLX321P/m1359-b19 to SLE66CLX320P/m1559-b22 and SLE66CLX321P/m1359-b22.

Conclusion

The change to the TOE is at the level of the implementation for the RF interface, a change that has no effect on assurance. Examination of the evidence indicates that the changes required are limited to the identification of the following TOE configuration items:

No	Type	Identifier	Release	Date	Form of Delivery
1	HW	SLE66CLX320P / SLE66CLX321P Smart Card IC	GDS-file-ID: m1359b22 with production line indicator: "2" (Dresden)		Wafer or packaged module (with or without inlay antenna)
2	Doc	Status Report, List of all available application notes		12.2005	Hardcopy and pdf- file

The Security Target [4] is still valid for the changed TOE. Consideration of the nature of the change leads to the conclusion that it is classified as a minor change and that certificate maintenance is the correct path to continuity of assurance.

Therefore, BSI agrees that the assurance as outlined in the Certification Report [3] is maintained for this version of the product. This report is an addendum to the Certification Report [3].
