Assurance Continuity Reassessment Report

BSI-DSZ-CC-0720-V2-2016-RA-01

Samsung S3CT9PC/PA/P7 16-bit SecuCalm RISC Microcontroller for Smart Card with optional Secure RSA and ECC library including specific IC Dedicated Software

from

Samsung Electronics

The IT product identified in this report certified under the certification procedure BSI-DSZ-CC-0720-V2-2016 [5] has undergone a re-assessment of the vulnerability analysis according to the current state of the art attack methods and based on the Security Target [9].

This reassessment confirms resistance of the product against attacks on the level of AVA_VAN.5 as stated in the product certificate.

More details are outlined on the following pages of this report.

This report is an addendum to the Certification Report BSI-DSZ-CC-0720-V2-2016.

Assessment

The reassessment was performed based on CC [1], CEM [2] and relevant AIS [4] and according to the BSI Certification Procedures [3] by the ITSecurity Evaluation Facility (ITSEF) TÜV Informationstechnik GmbH, approved by BSI.

The following guidance specific for the technology have been applied as a refinement of CC and CEM:

- The Application of CC to Integrated Circuits [4, AIS 25],

- Evaluation Methodology for HW Integrated Circuits [4, AIS 26] including Application of Attack Potential to Smartcards and Attack Methods for Smartcards and Similar Devices,

- Funktionalitätsklassen und Evaluationsmethodologie für physikalische Zufallszahlengeneratoren [4, AIS31],

- Version 3, Evaluation Methodology for CC Assurance Classes for EAL 5+ (CCv2.3 & CCv3.1) and EAL 6 (Ccv3.1) [4, AIS34] and

- Reuse of evaluation results [4, AIS38].

The results are documented in an updated version of the ETR [7].

To support composite evaluations according to AIS 36 the document ETR for composite evaluation [8] was updated and has been approved. It replaces the previous versions of this document. This document provides details of this platform evaluation that have to be considered in the course of a composite evaluation on top.

Within the scope of this reassessment, the following guidance documentation related to the product has been updated and replaced the former one:

Guidance Documentation	Previous version	New version
Security Application Note, S3CT9KA_K7_K3_PC_PA_P7	1.6, 2016-05-03	2.1, 2017-12-08

Tabelle 1: List of changed documents

As a consequence, the Security Target [6] was updated editorially as well, leading to version [9], thereby reflecting the above stated guidance documentation version number changes.

Conclusion

This reassessment confirms resistance of the product against attacks on the level AVA_VAN.5 as claimed in the Securtiy Target [9].

The obligations and recommendations as outlined in the certification and maintenance reports [5] are still valid and have to be considered.

The obligations and recommendations as outlined in the guidance documentation [10] have to be considered by the user of the product.

According to the scheme rules, evaluation results outlined in the document ETR for composite evaluation [8] as listed above are intended to be used for composite evaluations building on top of this evaluation procedure, as long as the ETR for composition document is not older than eighteen months and an attacks assumed to be feasible within the scope of these evaluations have not been performed successfully.

In case the composite evaluation process or the risk assessment process related to the usage of the product confirms that critical attack scenarios are of minor relevance in a specific application context, critical ratings might be overruled. The lifetime of the product and e.g. the risks on a long term product usage have to be considered.
