108 1 Introduction

109 1.1 ST and TOE reference

110 Title: Security Target, SMGW Version 2.0

111 Editors: Power Plus Communications AG

112 CC-Version: 3.1 Revision 5

113 Assurance Level: EAL 4+, augmented by AVA_VAN.5 and ALC_FLR.2

114 General Status: Final

115 Document Version: 5.5

116 Document Date: 23.11.2022

117 TOE: SMGW Version 2.0

118 Certification ID: BSI-DSZ-CC-0831-V5-2022

119 This document contains the security target of the *SMGW Version 2.0*.

120 This security target claims conformance to the *Smart Meter Gateway* protection profile
121 [PP_GW].

122

123 1.2 TOE reference

124 The TOE described in this security target is the *SMGW Version 2.0*.

125 The following classifications of the product "*Smart Meter Gateway*" contain the TOE:

- 126 • *BPL Smart Meter Gateway* (BPL-SMGW), SMGW-B-2A-111-00
- 127 • *ETH Smart Meter Gateway* (ETH-SMGW), SMGW-E-2A-111-00
- 128 • *LTE Smart Meter Gateway* (LTE-SMGW), SMGW-J-2A-111-10, SMGW-J-2A-
129 111-30, SMGW-K-2A-111-10 or SMGW-K-2A-111-30
- 130 • *G.hn Smart Meter Gateway* (G.hn-SMGW), SMGW-N-2A-111-00
- 131 • *LTE450 Smart Meter Gateway* (LTE450-SMGW), SMGW-V-2A-111-20

132 The TOE comprises the following parts:

- 133 • hardware device of the hardware generation 2A according to Table 1, including
134 the TOE's main circuit board, a carrier board, a power-supply unit and a radio

- 135 module for communication with wireless meter (included in the hardware device
 136 “*Smart Meter Gateway*”)
- 137 • firmware including software application (loaded into the circuit board)
 - 138 ○ “*SMGW Software Version 2.1.3*”, identified by the value 00771-34512
 139 which comprises of two revision numbers of the underlying version control sys-
 140 tem for the TOE, where the first part is for the operating system and the second
 141 part is for the SMGW application
 - 142 • manuals
 - 143 ○ „Handbuch für Verbraucher, Smart Meter Gateway“ [AGD_Consumer],
 144 identified by the SHA-256 hash value
 145 5EBA7AA630DEBBB98382A83912798F19CEA80A153F840CE786E44EC84C501

 160 rung“ [AGD_SEC], identified by the SHA-256 hash value
 161 17e280428e1602759b7bfa7dbbfde2e8d65ad7d518a96f0ab41a7130a9f38205

162 The hardware device “*Smart Meter Gateway*” includes a secure module with the product
 163 name “*TCOS Smart Meter Security Module Version 1.0 Release 2/P60C144PVE*” which
 164 is not part of the TOE but has its own certification id “BSI-DSZ-CC-0957-V2-2016”. More-
 165 over, a hard-wired communication adapter is connected to the TOE via [USB] as shown
 166 in Figure 3 which is not part of the TOE (but always an inseparable part of the delivered
 167 entity). This communication adapter can be either a LTE communication adapter, a
 168 LTE450 communication adapter, a BPL [IEEE 1901] communication adapter, a GPRS
 169 communication adapter, a CDMA communication adapter, a powerWAN-Ethernet

170 communication adapter, a G.hn [ITU G.hn] communication adapter or an ethernet com-
 171 munication adapter. There might be not every communication adapter available for each
 172 Hardware Generation.

173 The following table shows the different “Smart Meter Gateway” product classifications
 174 applied on the case of the product, while not all of them might be part of the TOE:

#	Characteristic	Value	Description
1	Product family	SMGW	each classification of a type start with this value
2		-	<i>Delimiter</i>
3	Communication Technology	B	Product Type „BPL Smart Meter Gateway“
		C	Product Type „CDMA Smart Meter Gateway“
		E	Product Type „ETH Smart Meter Gateway“
		G	Product Type „GPRS Smart Meter Gateway“
		L	Product Type „LTE Smart Meter Gateway“
		J	Product Type “LTE Smart Meter Gateway”
		K	Product Type „LTE Smart Meter Gateway“
		P	Product Type „powerWAN-ETH Smart Meter Gateway“
		N	Product Type „G.hn Smart Meter Gateway“
	V	Product Type “LTE450 Smart Meter Gateway”	
4		-	<i>Delimiter</i>
5	Hardware generation	1A	Identification of hardware generation; version 1.0 of “SMGW Hardware”

#	Characteristic	Value	Description
		1B	Identification of hardware generation; version 1.0.1 of "SMGW Hardware" (with new power adapter)
		2A	Identification of hardware generation; version 2.0 of "SMGW Hardware"
6		-	<i>Delimiter</i>
7	HAN Interface	1	Ethernet
8	CLS Interface	1	Ethernet
9	LMN Interface	1	Wireless and wired
10		-	<i>Delimiter</i>
11	SIM card type	0	<i>None</i>
		1	SIM card assembled at factory and SIM slot
		2	SIM card assembled at factory only
		3	SIM slot only
12	reserved	0	

175 **Table 1: Smart Meter Gateway product classifications**

176 **1.3 Introduction**

177 The increasing use of *green energy* and upcoming technologies around e-mobility lead
 178 to an increasing demand for functions of a so called smart grid. A smart grid hereby
 179 refers to a commodity¹ network that intelligently integrates the behaviour and actions of
 180 all entities connected to it – suppliers of natural resources and energy, its consumers

¹ Commodities can be electricity, gas, water or heat which is distributed from its generator to the consumer through a grid (network).

181 and those that are both – in order to efficiently ensure a more sustainable, economic and
182 secure supply of a certain commodity (definition adopted from [CEN]).

183 In its vision such a smart grid would allow to invoke consumer devices to regulate the
184 load and availability of resources or energy in the grid, e.g. by using consumer devices
185 to store energy or by triggering the use of energy based upon the current load of the
186 grid². Basic features of such a smart use of energy or resources are already reality.
187 Providers of electricity in Germany, for example, have to offer at least one tariff that has
188 the purpose to motivate the consumer to save energy.

189 In the past, the production of electricity followed the demand/consumption of the con-
190 sumers. Considering the strong increase in renewable energy and the production of en-
191 ergy as a side effect in heat generation today, the consumption/demand has to follow
192 the – often externally controlled – production of energy. Similar mechanisms can exist
193 for the gas network to control the feed of biogas or hydrogen based on information sub-
194 mitted by consumer devices.

195 An essential aspect for all considerations of a smart grid is the so called *Smart Metering*
196 *System* that meters the consumption or production of certain commodities at the con-
197 sumers' side and allows sending the information about the consumption or production to
198 external entities, which is then the basis for e. g. billing the consumption or production.

199 This Security Target defines the security objectives, corresponding requirements and
200 their fulfilment for a Gateway which is the central communication component of such a
201 Smart Metering System (please refer to chapter 1.4.2 for a more detailed overview).

202 The Target of Evaluation (TOE) that is described in this document is an electronic unit
203 comprising hardware and software/firmware³ used for collection, storage and provision
204 of Meter Data⁴ from one or more Meters of one or multiple commodities.

205 The Gateway connects a Wide Area Network (WAN) with a Network of Devices of one
206 or more Smart Metering devices (Local Metrological Network, LMN) and the consumer
207 Home Area Network (HAN), which hosts Controllable Local Systems (CLS) and visuali-
208 zation devices. The security functionality of the TOE comprises

2 Please note that such a functionality requires a consent or a contract between the supplier and the consumer, alterna-
tively a regulatory requirement.

3 For the rest of this document the term "firmware" will be used if the complete firmware ist meant. For the application in-
cluding its services the term "software" will be used.

4 Please refer to chapter 3.2 for an exact definition of the term "Meter Data".

- 209
- protection of confidentiality, authenticity, integrity of data and
- 210
- information flow control

211 mainly to protect the privacy of consumers, to ensure a reliable billing process and to
212 protect the Smart Metering System and a corresponding large scale infrastructure of the
213 smart grid. The availability of the Gateway is not addressed by this ST.

214

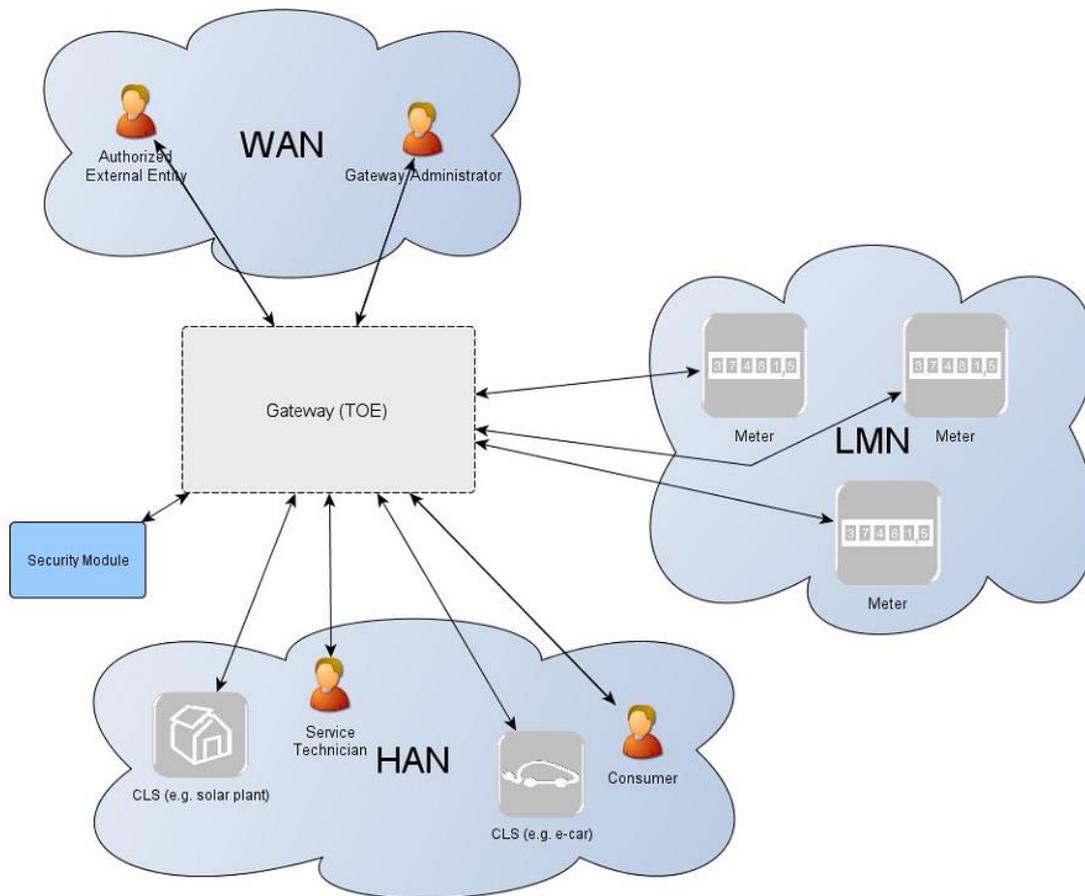

215 **1.4 TOE Overview**

216 **1.4.1 Introduction**

217 The TOE as defined in this Security Target is the Gateway in a Smart Metering System.
218 In the following subsections the overall Smart Metering System will be described first
219 and afterwards the Gateway itself.

220 There are various different vocabularies existing in the area of Smart Grid, Smart Meter-
221 ing and Home Automation. Furthermore, the Common Criteria maintain their own vo-
222 cabulary. The Protection Profile [PP_GW, chapter 1.3] provides an overview over the
223 most prominent terms used in this Security Target to avoid any bias which is not fully
224 repeated here.

225 **1.4.2 Overview of the Gateway in a Smart Metering System**
 226 The following figure provides an overview of the TOE as part of a complete Smart Me-
 227 tering System from a purely functional perspective as used in this ST.⁵

228 **Figure 1: The TOE and its direct environment**
 229

230
 231 As can be seen in Figure 1, a system for smart metering comprises different functional
 232 units in the context of the descriptions in this ST:

- 233 • The **Gateway** (as defined in this ST) serves as the communication component
 234 between the components in the local area network (LAN) of the consumer and
 235 the outside world. It can be seen as a special kind of firewall dedicated to the
 236 smart metering functionality. It also collects, processes and stores the records

⁵ It should be noted that this description purely contains aspects that are relevant to motivate and understand the functionalities of the Gateway as described in this ST. It does not aim to provide a universal description of a Smart Metering System for all application cases.

237 from Meter(s) and ensures that only authorised parties have access to them or
238 derivatives thereof. Before sending meter data⁶ the information will be en-
239 crypted and signed using the services of a Security Module. The Gateway fea-
240 tures a mandatory user interface, enabling authorised consumers to access the
241 data relevant to them.

- 242 • The **Meter** itself records the consumption or production of one or more com-
243 modities (e.g. electricity, gas, water, heat) and submits those records in defined
244 intervals to the Gateway. The Meter Data has to be signed and encrypted be-
245 fore transfer in order to ensure its confidentiality, authenticity, and integrity. The
246 Meter is comparable to a classical meter⁷ and has comparable security require-
247 ments; it will be sealed as classical meters according to the regulations of the
248 calibration authority. The Meter further supports the encryption and integrity
249 protection of its connection to the Gateway⁸.
- 250 • The Gateway utilises the services of a **Security Module** (e.g. a smart card) as
251 a cryptographic service provider and as a secure storage for confidential assets.
252 The Security Module will be evaluated separately according to the requirements
253 in the corresponding Protection Profile (c.f. [SecModPP]).

254 **Controllable Local Systems** (CLS, as shown in Figure 2) may range from local power
255 generation plants, controllable loads such as air condition and intelligent household ap-
256 pliances (“white goods”) to applications in home automation. CLS may utilise the ser-
257 vices of the Gateway for communication services. However, CLS are not part of the
258 Smart Metering System.

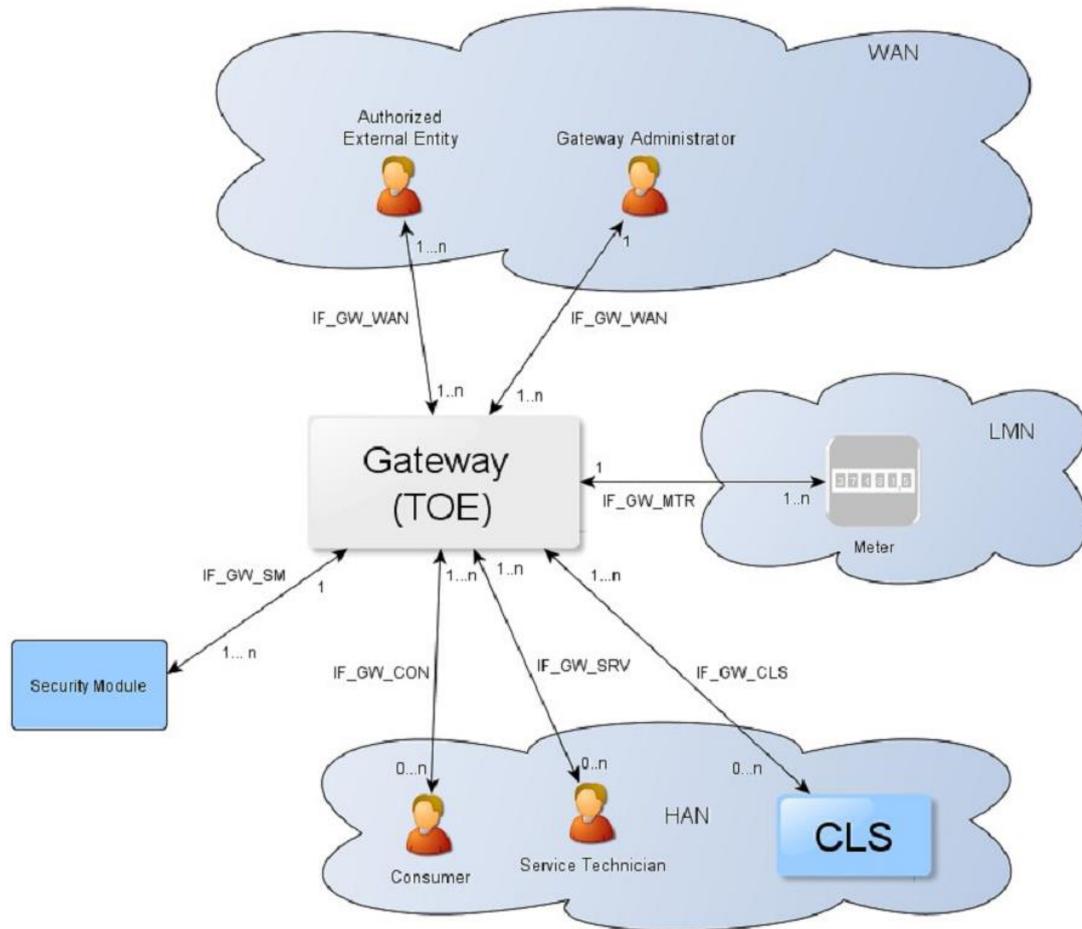

259 The following figure introduces the external interfaces of the TOE and shows the cardi-
260 nality of the involved entities. Please note that the arrows of the interfaces within the
261 Smart Metering System as shown in Figure 2 indicate the flow of information. However,
262 it does not indicate that a communication flow can be initiated bi-directionally. Indeed,

6 Please note that readings and data which are not relevant for billing may require an explicit endorsement of the consumer.

7 In this context, a classical meter denotes a meter without a communication channel, i.e. whose values have to be read out locally.

8 It should be noted that this ST does not imply that the connection between the Gateways and external components (specifically meters and CLS) is cable based. It is also possible that the connections as shown in Figure 1 are realised deploying a wireless technology. However, the requirements on how the connections shall be secured apply regardless of the realisation.

263 the following chapters of this ST will place dedicated requirements on the way an infor-
 264 mation flow can be initiated⁹.

265
 266 **Figure 2: The logical interfaces of the TOE**

267 The overview of the Smart Metering System as described before is based on a threat
 268 model that has been developed for the Smart Metering System and has been motivated
 269 by the following considerations:

- 270
- The Gateway is the central communication unit in the Smart Metering System. It is the only unit directly connected to the WAN, to be the first line of defence an attacker located in the WAN would have to conquer.
 - The Gateway is the central component that collects, processes and stores Meter Data. It therewith is the primary point for user interaction in the context of the Smart Metering System.
- 271
 272
 273
 274
 275

⁹ Please note that the cardinality of the interface to the consumer is 0..n as it cannot be assumed that a consumer is interacting with the TOE at all.

- 276
- To conquer a Meter in the LMN or CLS in the HAN (that uses the TOE for communication) a WAN attacker first would have to attack the Gateway successfully. All data transferred between LAN and WAN flows via the Gateway which makes it an ideal unit for implementing significant parts of the system's overall security functionality.
- 277
- 278
- 279
- 280
- Because a Gateway can be used to connect and protect multiple Meters (while a Meter will always be connected to exactly one Gateway) and CLS with the WAN, there might be more Meters and CLS in a Smart Metering System than there are Gateways.
- 281
- 282
- 283
- 284

285 All these arguments motivated the approach to have a Gateway (using a Security Module for cryptographic support), which is rich in security functionality, strong and evaluated in depth, in contrast to a Meter which will only deploy a minimum of security functions. The Security Module will be evaluated separately.

286

287

288

289 **1.4.3 TOE description**

290 The Smart Metering Gateway (in the following short: Gateway or TOE) may serve as the communication unit between devices of private and commercial consumers and service providers of a commodity industry (e.g. electricity, gas, water, etc.). It also collects, processes and stores Meter Data and is responsible for the distribution of this data to external entities.

291

292

293

294

295 Typically, the Gateway will be placed in the household or premises of the consumer¹⁰ of the commodity and enables access to local Meter(s) (i.e. the unit(s) used for measuring the consumption or production of electric power, gas, water, heat etc.) and may enable access to Controllable Local Systems (e.g. power generation plants, controllable loads such as air condition and intelligent household appliances).

296

297

298

299

300 The TOE has a fail-safe design that specifically ensures that any malfunction can not impact the delivery of a commodity, e.g. energy, gas or water¹¹.

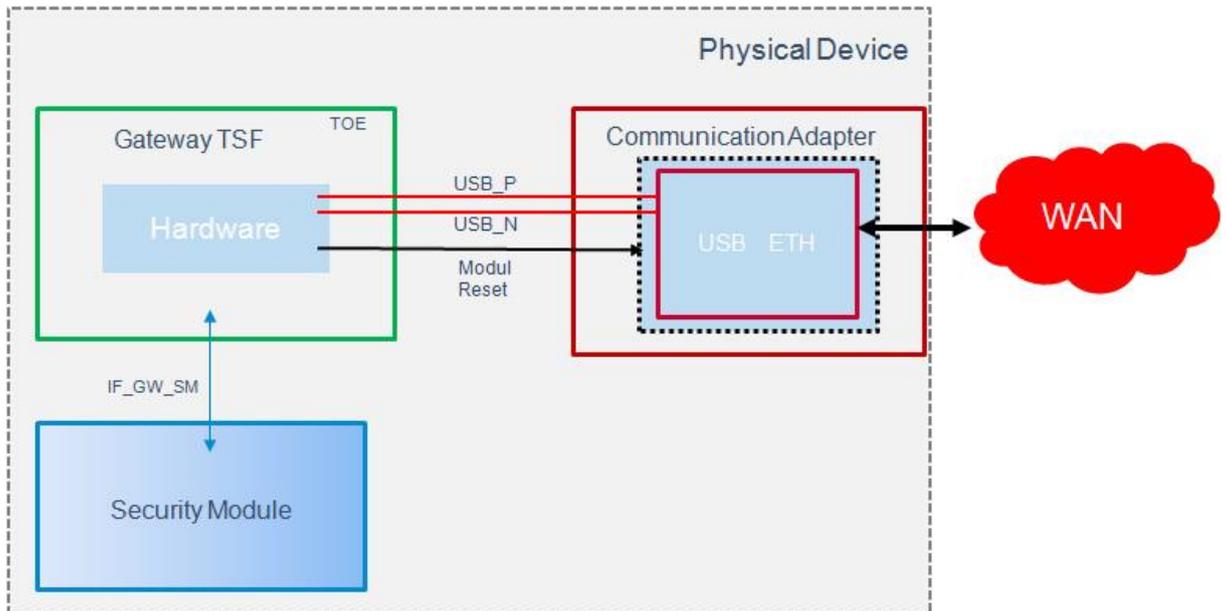

301

302

¹⁰ Please note that it is possible that the consumer of the commodity is not the owner of the premises where the Gateway will be placed. However, this description acknowledges that there is a certain level of control over the physical access to the Gateway.

¹¹ Indeed, this Security Target assumes that the Gateway and the Meters have no possibility at all to impact the delivery of a commodity. Even an intentional stop of the delivery of a certain commodity is Not within the scope of this Security Target. It should, however, be noted that such a functionality may be realised by a CLS that utilises the services of the TOE for its communication.

303 The following figure provides an overview of the product with its TOE and non-TOE parts:

304
305 **Figure 3: The product with its TOE and non-TOE parts**

306 The TOE communicates over the interface *IF_GW_SM* with a security module and over
307 the interfaces *USB_P*, *USB_N* and *Module Reset* with one of the possible communica-
308 tion adapters according to chapter 1.2. The communication adapters, which are not part
309 of the TOE, transmit data from the USB interface to the WAN interface and vice versa.

310 1.4.4 TOE Type definition

311 At first, the TOE is a communication Gateway. It provides different external communica-
312 tion interfaces and enables the data communication between these interfaces and con-
313 nected IT systems. It further collects, processes and stores Meter Data and is responsi-
314 ble for the distribution of this data to external parties.

315 Typically, the Gateway will be placed in the household or premises of the consumer of
316 the commodity and enables access to local Meter(s) (i.e. the unit(s) used for measuring
317 the consumption or production of electric power, gas, water, heat etc.) and may enable
318 access to Controllable Local Systems (e.g. power generation plants, controllable loads
319 such as air condition and intelligent household appliances). Roles respectively External
320 Entities in the context of the TOE are introduced in chapter 3.1.

321 The TOE described in this ST is a product that has been developed by Power Plus Com-
322 munication AG. It is a communication product which complies with the requirements of
323 the Protection Profile "Protection Profile for the Gateway of a Smart Metering System"

324 [PP_GW]. The TOE consists of hardware and software including the operating system.
325 The communication with more than one meter is possible.

326 The TOE is implemented as a separate physical module which can be integrated into
327 more complex modular systems. This means that the TOE can be understood as an
328 OEM module which provides all required physical interfaces and protocols on well de-
329 fined interfaces. Because of this, the module can be integrated into communication de-
330 vices and directly into meters.

331 The TOE-design includes the following components:

- 332 • The security relevant components compliant to the Protection Profile.
- 333 • Components with no security relevance (e.g. communication protocols and in-
334 terfaces).

335 The TOE evaluation does not include the evaluation of the Security Module. In fact, the
336 TOE relies on the security functionality of the Security Module but it must be security
337 evaluated in a separate security evaluation¹².

338 The hardware platform of the TOE mainly consists of a suitable embedded CPU, volatile
339 and non-volatile memory and supporting circuits like Security Module and RTC.

340 The TOE contains mechanisms for the integrity protection for its firmware.

341 The TOE supports the following communication protocols:

- 342 • OBIS according to [IEC-62056-6-1] and [EN 13757-1],
- 343 • DLMS/COSEM according to [IEC-62056-6-2],
- 344 • SML according to [IEC-62056-5-3-8],
- 345 • unidirectional and bidirectional wireless M-Bus according to [EN 13757-3],
346 [EN 13757-4], and [IEC-62056-21].

347

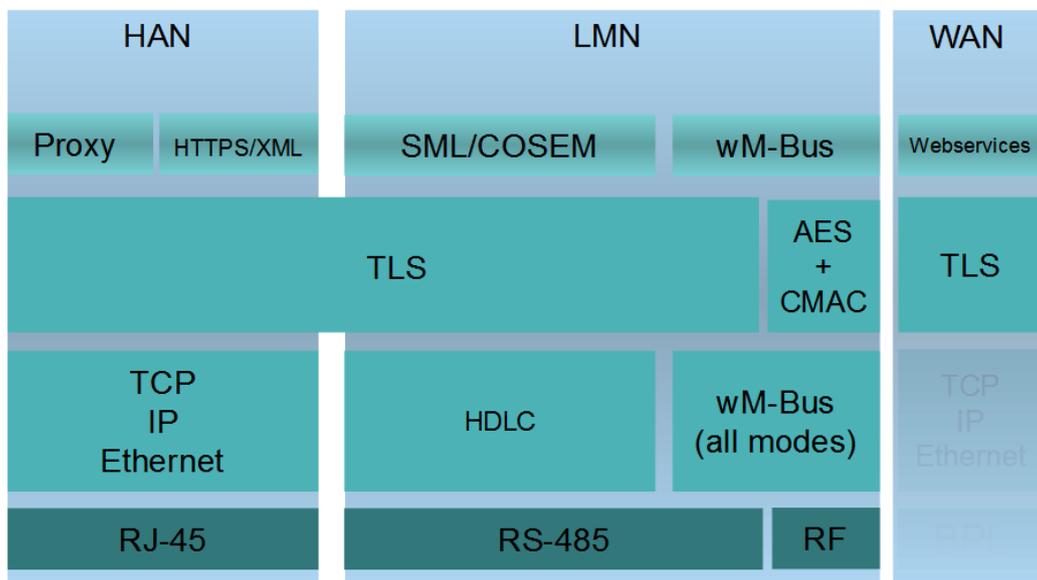

¹² Please note that the Security Module is physically integrated into the Gateway even though it is not part of the TOE.

348 The TOE provides the following physical interfaces for communication

- 349
- Wireless M-Bus (LMN) according to [EN 13757-3],
 - 350 • RS-485 (LMN) according to [EIA RS-485],
 - 351 • Ethernet (HAN) according to [IEEE 802.3], and
 - 352 • USB (WAN) according to [USB].

353 The physical interface for the WAN communication is described in chapter 1.4.3. The
354 communication is protected according to [TR-03109].

355 The communication into the HAN is also provided by the Ethernet interface. The proto-
356 cols HTTPS and TLS proxy are therefore supported.

357

358 **Figure 4: The TOE's protocol stack**

359 The TOE provides the following functionality:

- 360
- Protected handling of Meter Data compliant to [PP_GW, chapter 1.4.6.1 and
361 1.4.6.2]
 - 362 • Integrity and authenticity protection e. g. of Meter Data compliant to [PP_GW,
363 chapter 1.6.4.3]
 - 364 • Protection of LAN devices against access from the WAN compliant to [PP_GW,
365 chapter 1.4.6.4]
 - 366 • Wake-Up Service compliant to [PP_GW, chapter 1.4.6.5]
 - 367 • Privacy protection compliant to [PP_GW, chapter 1.4.6.6]
 - 368 • Management of Security Functions compliant to [PP_GW, chapter 1.4.6.7]

- 369 • Cryptography of the TOE and its Security Module compliant to [PP_GW, chap-
370 ter 1.4.8]

371 **1.4.5 TOE logical boundary**

372 The logical boundary of the Gateway can be defined by its security features:

- 373 • *Handling of Meter Data*, collection and processing of Meter Data, submission
374 to authorised external entities (e.g. one of the service providers involved) where
375 necessary protected by a digital signature
- 376 • *Protection of authenticity, integrity and confidentiality* of data temporarily or per-
377 sistently stored in the Gateway, transferred locally within the LAN and trans-
378 ferred in the WAN (between Gateway and authorised external entities)
- 379 • *Firewalling* of information flows to the WAN and information flow control among
380 Meters, Controllable Local Systems and the WAN
- 381 • *A Wake-Up-Service* that allows to contact the TOE from the WAN side
- 382 • *Privacy preservation*
- 383 • *Management* of Security Functionality
- 384 • *Identification and Authentication* of TOE users

385 The following sections introduce the security functionality of the TOE in more detail.

386 1.4.5.1 Handling of Meter Data¹³

387 The Gateway is responsible for handling Meter Data. It receives the Meter Data from the
388 Meter(s), processes it, stores it and submits it to external entities.

389 The TOE utilises Processing Profiles to determine which data shall be sent to which
390 component or external entity. A Processing Profile defines:

- 391 • how Meter Data must be processed,
- 392 • which processed Meter Data must be sent in which intervals,
- 393 • to which component or external entity,
- 394 • signed using which key material,
- 395 • encrypted using which key material,
- 396 • whether processed Meter Data shall be pseudonymised or not, and
- 397 • which pseudonym shall be used to send the data.

13 Please refer to chapter 3.2 for an exact definition of the various data types.

398 The Processing Profiles are not only the basis for the security features of the TOE; they
399 also contain functional aspects as they indicate to the Gateway how the Meter Data shall
400 be processed. More details on the Processing Profiles can be found in [TR-03109-1].

401 The Gateway restricts access to (processed) Meter Data in the following ways:

- 402 • consumers must be identified and authenticated first before access to any data
403 may be granted,
- 404 • the Gateway accepts Meter Data from authorised Meters only,
- 405 • the Gateway sends processed Meter Data to correspondingly authorised exter-
406 nal entities only.

407 The Gateway accepts data (e.g. configuration data, firmware updates) from correspond-
408 ingly authorised Gateway Administrators or correspondingly authorised external entities
409 only. This restriction is a prerequisite for a secure operation and therewith for a secure
410 handling of Meter Data. Further, the Gateway maintains a calibration log with all relevant
411 events that could affect the calibration of the Gateway.

412 These functionalities:

- 413 • prevent that the Gateway accepts data from or sends data to unauthorised en-
414 tities,
- 415 • ensure that only the minimum amount of data leaves the scope of control of the
416 consumer,
- 417 • preserve the integrity of billing processes and as such serve in the interests of
418 the consumer as well as in the interests of the supplier. Both parties are inter-
419 ested in an billing process that ensures that the value of the consumed amount
420 of a certain commodity (and only the used amount) is transmitted,
- 421 • preserve the integrity of the system components and their configurations.

422 The TOE offers a local interface to the consumer (see also IF_GW_CON in Figure 2)
423 and allows the consumer to obtain information via this interface. This information com-
424 prises the billing-relevant data (to allow the consumer to verify an invoice) and infor-
425 mation about which Meter Data has been and will be sent to which external entity. The
426 TOE ensures that the communication to the consumer is protected by using TLS and
427 ensures that consumers only get access to their own data. Therefore, the TOE contains
428 a web server that delivers the content to the web browser after successful authentication
429 of the user.

430 1.4.5.2 Confidentiality protection

431 The TOE protects data from unauthorised disclosure

- 432
- 433 • while received from a Meter via the LMN,
 - 434 • while received from the administrator via the WAN,
 - 435 • while temporarily stored in the volatile memory of the Gateway,
 - 436 • while transmitted to the corresponding external entity via the WAN or HAN.

437 Furthermore, all data, which no longer have to be stored in the Gateway, are securely
438 erased to prevent any form of access to residual data via external interfaces of the TOE.

439 These functionalities protect the privacy of the consumer and prevent that an unauthor-
440 ised party is able to disclose any of the data transferred in and from the Smart Metering
441 System (e.g. Meter Data, configuration settings).

442 The TOE utilises the services of its Security Module for aspects of this functionality.

443 1.4.5.3 Integrity and Authenticity protection

444 The Gateway provides the following authenticity and integrity protection:

- 445 • Verification of authenticity and integrity when receiving Meter Data from a Meter
446 via the LMN, to verify that the Meter Data have been sent from an authentic
447 Meter and have not been altered during transmission. The TOE utilises the ser-
448 vices of its Security Module for aspects of this functionality.
- 449 • Application of authenticity and integrity protection measures when sending pro-
450 cessed Meter Data to an external entity, to enable the external entity to verify
451 that the processed Meter Data have been sent from an authentic Gateway and
452 have not been changed during transmission. The TOE utilises the services of
453 its Security Module for aspects of this functionality.
- 454 • Verification of authenticity and integrity when receiving data from an external
455 entity (e.g. configuration settings or firmware updates) to verify that the data
456 have been sent from an authentic and authorised external entity and have not
457 been changed during transmission. The TOE utilises the services of its Security
458 Module for aspects of this functionality.

459 These functionalities

- 460 • prevent within the Smart Metering System that data may be sent by a non-
461 authentic component without the possibility that the data recipient can detect
462 this,

- 462
- facilitate the integrity of billing processes and serve for the interests of the consumer as well as for the interest of the supplier. Both parties are interested in the transmission of correct processed Meter Data to be used for billing,

463

464

465

 - protect the Smart Metering System and a corresponding large scale Smart Grid infrastructure by preventing that data (e.g. Meter Data, configuration settings, or firmware updates) from forged components (with the aim to cause damage to the Smart Grid) will be accepted in the system.

466

467

468

469 1.4.5.4 Information flow control and firewall

470 The Gateway separates devices in the LAN of the consumer from the WAN and enforces
471 the following information flow control to control the communication between the networks
472 that the Gateway is attached to:

- only the Gateway may establish a connection to an external entity in the WAN¹⁴; specifically connection establishment by an external entity in the WAN or a Meter in the LMN to the WAN is not possible,
 - the Gateway can establish connections to devices in the LMN or in the HAN,
 - Meters in the LMN are only allowed to establish a connection to the Gateway,
 - the Gateway shall offer a wake-up service that allows external entities in the WAN to trigger a connection establishment by the Gateway,
 - connections are allowed to pre-configured addresses only,
 - only cryptographically-protected (i.e. encrypted, integrity protected and mutually authenticated) connections are possible.¹⁵
- 473
- 474
- 475
- 476
- 477
- 478
- 479
- 480
- 481
- 482

483 These functionalities

- prevent that the Gateway itself or the components behind the Gateway (i.e. Meters or Controllable Local Systems) can be conquered by a WAN attacker (as defined in section 3.4), that processed data are transmitted to the wrong external entity, and that processed data are transmitted without being confidentiality/authenticity/integrity-protected,
 - protect the Smart Metering System and a corresponding large scale infrastructure in two ways: by preventing that conquered components will send forged
- 484
- 485
- 486
- 487
- 488
- 489
- 490

14 Please note that this does not affect the functionality for a CLS to establish a secure channel to a party in the WAN. Technically however, this channel is established by the TOE who acts as a proxy between the CLS and the WAN.

15 To establish an encrypted channel the TOE may use the required protocols such as DHCP or PPP. Beside the establishment of an encrypted channel no unprotected communication between the TOE and external entities located in the WAN or LAN is allowed.

491 Meter Data (with the aim to cause damage to the Smart Grid), and by preventing
 492 that widely distributed Smart Metering Systems can be abused as a platform
 493 for malicious software/firmware to attack other systems in the WAN (e.g. a WAN
 494 attacker who would be able to install a botnet on components of the Smart Me-
 495 tering System).

496 The communication flows that are enforced by the Gateway between parties in the HAN,
 497 LMN and WAN are summarized in the following table¹⁶:

Source(1 st column) Destination (1 st row)	WAN	LMN	HAN
WAN	- (see following list)	No connection establishment allowed	No connection establishment allowed
LMN	No connection establishment allowed	- (see following list)	No connection establishment allowed
HAN	Connection establishment is allowed to trustworthy, pre-configured endpoints and via an encrypted channel only ¹⁷	No connection establishment allowed	- (see following list)

498 **Table 2: Communication flows between devices in different networks**

499 For communications within the different networks the following assumptions are defined:

- 500 1. Communications within the **WAN** are not restricted. However, the Gateway is
 501 not involved in this communication,
 502 2. No communications between devices in the **LMN** are assumed. Devices in the
 503 LMN may only communicate to the Gateway and shall not be connected to any
 504 other network,
 505 3. Devices in the **HAN** may communicate with each other. However, the Gateway
 506 is not involved in this communication. If devices in the HAN have a separate

16 Please note that this table only addresses the communication flow between devices in the various networks attached to the Gateway. It does not aim to provide an overview over the services that the Gateway itself offers to those devices nor an overview over the communication between devices in the same network. This information can be found in the paragraphs following the table.

17 The channel to the external entity in the WAN is established by the Gateway.

507 connection to parties in the WAN (beside the Gateway) this connection is as-
508 sumed to be appropriately protected. It should be noted that for the case that a
509 TOE connects to more than one HAN communications between devices within
510 different HAN via the TOE are only allowed if explicitly configured by a Gateway
511 Administrator.

512 Finally, the Gateway itself offers the following services within the various networks:

- 513 • the Gateway accepts the submission of Meter Data from the LMN,
- 514 • the Gateway offers a wake-up service at the WAN side as described in chapter
515 1.4.6.5 of [PP_GW],
- 516 • the Gateway offers a user interface to the HAN that allows CLS or consumers
517 to connect to the Gateway in order to read relevant information.

518 1.4.5.5 Wake-Up-Service

519 In order to protect the Gateway and the devices in the LAN against threats from the WAN
520 side the Gateway implements a strict firewall policy and enforces that connections with
521 external entities in the WAN shall only be established by the Gateway itself (e.g. when
522 the Gateway delivers Meter Data or contacts the Gateway Administrator to check for
523 updates)¹⁸.

524 While this policy is the optimal policy from a security perspective, the Gateway
525 Administrator may want to facilitate applications in which an instant communication to
526 the Gateway is required.

527 In order to allow this kind of re-activeness of the Gateway, this ST allows the Gateway
528 to keep existing connections to external entities open (please refer to [TR-03109-3] for
529 more details) and to offer a so called wake-up service.

530 The Gateway is able to receive a wake-up message that is signed by the Gateway
531 Administrator. The following steps are taken:

- 532 1. The Gateway verifies the wake-up packet. This comprises
 - 533 i. a check if the header identification is correct,
 - 534 ii. the recipient is the Gateway,
 - 535 iii. the wake-up packet has been sent/received within an acceptable period
536 of time in order to prevent replayed messages,

¹⁸ Please note that this does not affect the functionality for a CLS to establish a secure channel to a party in the WAN. Technically however, this channel is established by the TOE who acts as a proxy between the CLS and the WAN.

- 537 iv. the wake-up message has not been received before,
538 2. If the wake-up message could not be verified as described in step #1, the
539 message will be dropped/ignored. No further operations will be initiated and no
540 feedback is provided.
541 3. If the message could be verified as described in step #1, the signature of the
542 wake-up message will be verified. The Gateway uses the services of its Security
543 Module for signature verification.
544 4. If the signature of the wake-up message cannot be verified as described in step
545 #3 the message will be dropped/ignored. No feedback is given to the sending
546 external entity and the wake-up sequence terminates.
547 5. If the signature of the wake-up message could be verified successfully , the
548 Gateway initiates a connection to a pre-configured external entity; however no
549 feedback is given to the sending external entity.

550 More details on the exact implementation of this mechanism can be found in [TR-03109-
551 1, „Wake-Up Service“].

552 1.4.5.6 Privacy Preservation

553 The preservation of the privacy of the consumer is an essential aspect that is imple-
554 mented by the functionality of the TOE as required by this ST.

555 This contains two aspects:

556 The Processing Profiles that the TOE obeys facilitate an approach in which only a mini-
557 mum amount of data have to be submitted to external entities and therewith leave the
558 scope of control of the consumer. The mechanisms “encryption” and “pseudonymisation”
559 ensure that the data can only be read by the intended recipient and only contains an
560 association with the identity of the Meter if this is necessary.

561 On the other hand, the TOE provides the consumer with transparent information about
562 the information flows that happen with their data. In order to achieve this, the TOE im-
563 plements a consumer log that specifically contains the information about the information
564 flows which has been and will be authorised based on the previous and current Pro-
565 cessing Profiles. The access to this consumer log is only possible via a local interface
566 from the HAN and after authentication of the consumer. The TOE does only allow a
567 consumer access to the data in the consumer log that is related to their own consumption
568 or production. The following paragraphs provide more details on the information that is
569 included in this log:

570 **Monitoring of Data Transfers**

571 The TOE keeps track of each data transmission in the consumer log and allows the
572 consumer to see details on which information have been and will be sent (based on the
573 previous and current settings) to which external entity.

574 **Configuration Reporting**

575 The TOE provides detailed and complete reporting in the consumer log of each security
576 and privacy-relevant configuration setting. Additional to device specific configuration set-
577 tings, the consumer log contains the parameters of each Processing Profile. The con-
578 sumer log contains the configured addresses for internal and external entities including
579 the CLS.

580 **Audit Log and Monitoring**

581 The TOE provides all audit data from the consumer log at the user interface
582 IF_GW_CON. Access to the consumer log is only possible after successful authentica-
583 tion and only to information that the consumer has permission to (i.e. that has been
584 recorded based on events belonging to the consumer).

585 1.4.5.7 Management of Security Functions

586 The Gateway provides authorised Gateway Administrators with functionality to manage
587 the behaviour of the security functions and to update the TOE.

588 Further, it is defined that only authorised Gateway Administrators may be able to use
589 the management functionality of the Gateway (while the Security Module is used for the
590 authentication of the Gateway Administrator) and that the management of the Gateway
591 shall only be possible from the WAN side interface.

592 **System Status**

593 The TOE provides information on the current status of the TOE in the system log. Spe-
594 cifically it shall indicate whether the TOE operates normally or any errors have been
595 detected that are of relevance for the administrator.

596 1.4.5.8 Identification and Authentication

597 To protect the TSF as well as User Data and TSF data from unauthorized modification
598 the TOE provides a mechanism that requires each user to be successfully identified and
599 authenticated before allowing any other actions on behalf of that user. This functionality
600 includes the identification and authentication of users who receive data from the

601 Gateway as well as the identification and authentication of CLS located in HAN and
 602 Meters located in LMN.

603 The Gateway provides different kinds of identification and authentication mechanisms
 604 that depend on the user role and the used interfaces. Most of the mechanisms require
 605 the usage of certificates. Only consumers are able to decide whether they use certifi-
 606 cates or username and password for identification and authentication.

607 **1.4.6 The logical interfaces of the TOE**

608 The TOE offers its functionality as outlined before via a set of external interfaces. Figure
 609 2 also indicates the cardinality of the interfaces. The following table provides an overview
 610 of the mandatory external interfaces of the TOE and provides additional information:

Interface Name	Description
IF_GW_CON	Via this interface the Gateway provides the consumer ¹⁹ with the possibility to review information that is relevant for billing or the privacy of the consumer. Specifically the access to the consumer log is only allowed via this interface.
IF_GW_MTR	Interface between the Meter and the Gateway. The Gateway receives Meter Data via this interface. ²⁰
IF_GW_SM	The Gateway invokes the services of its Security Module via this interface.
IF_GW_CLS	CLS may use the communication services of the Gateway via this interface. The implementation of at least one interface for CLS is mandatory.
IF_GW_WAN	The Gateway submits information to authorised external entities via this interface.
IF_GW_SRV	Local interface via which the service technician has the possibility to review information that are relevant to maintain the Gateway. Specifically he has

19 Please note that this interface allows consumer (or consumer's CLS) to connect to the gateway in order to read consumer specific information.

20 Please note that an implementation of this external interface is also required in the case that Meter and Gateway are implemented within one physical device in order to allow the extension of the system by another Meter.

	read access to the system log only via this interface. He has also the possibility to view non-TSF data via this interface.
--	---

611 **Table 3: Mandatory TOE external interfaces**

612 **1.4.7 The cryptography of the TOE and its Security Module**

613 Parts of the cryptographic functionality used in the upper mentioned functions is provided
 614 by a Security Module. The Security Module provides strong cryptographic functionality,
 615 random number generation, secure storage of secrets and supports the authentication
 616 of the Gateway Administrator. The Security Module is a different IT product and not part
 617 of the TOE as described in this ST. Nevertheless, it is physically embedded into the
 618 Gateway and protected by the same level of physical protection. The requirements
 619 applicable to the Security Module are specified in a separate PP (see [SecModPP]).

620 The following table provides a more detailed overview on how the cryptographic
 621 functions are distributed between the TOE and its Security Module.

Aspect	TOE	Security Module
Communication with external entities	<ul style="list-style-type: none"> • encryption • decryption • hashing • key derivation • MAC generation • MAC verification • secure storage of the TLS certificates 	Key negotiation: <ul style="list-style-type: none"> • support of the authentication of the external entity • secure storage of the private key • random number generation • digital signature verification and generation
Communication with the consumer	<ul style="list-style-type: none"> • encryption • decryption • hashing • key derivation • MAC generation • MAC verification • secure storage of the TLS certificates 	Key negotiation: <ul style="list-style-type: none"> • support of the authentication of the consumer • secure storage of the private key • digital signature verification and generation • random number generation

Communication with the Meter	<ul style="list-style-type: none"> • encryption • decryption • hashing • key derivation • MAC generation • MAC verification • secure storage of the TLS certificates 	Key negotiation (in case of TLS connection): <ul style="list-style-type: none"> • support of the authentication of the meter • secure storage of the private key • digital signature verification and generation • random number generation
Signing data before submission to an external entity	<ul style="list-style-type: none"> • hashing 	Signature creation <ul style="list-style-type: none"> • secure storage of the private key
Content data encryption and integrity protection	<ul style="list-style-type: none"> • encryption • decryption • MAC generation • key derivation • secure storage of the public Key 	Key negotiation: <ul style="list-style-type: none"> • secure storage of the private key • random number generation

622 **Table 4: Cryptographic support of the TOE and its Security Module**

623

624 1.4.7.1 Content data encryption vs. an encrypted channel

625 The TOE utilises concepts of the encryption of data on the content level as well as the
626 establishment of a trusted channel to external entities.

627 As a general rule, all processed Meter Data that is prepared to be submitted to ex-
628 ternal entities is encrypted and integrity protected on a content level using CMS (ac-
629 cording to [TR-03109-1-I]).

630 Further, all communication with external entities is enforced to happen via encrypted,
631 integrity protected and mutually authenticated channels.

632 This concept of encryption on two layers facilitates use cases in which the external
633 party that the TOE communicates with is not the final recipient of the Meter Data. In

634 this way, it is for example possible that the Gateway Administrator receives Meter
635 Data that they forward to other parties. In such a case, the Gateway Administrator is
636 the endpoint of the trusted channel but cannot read the Meter Data.

637 Administration data that is transmitted between the Gateway Administrator and the TOE
638 is also encrypted and integrity protected using CMS.

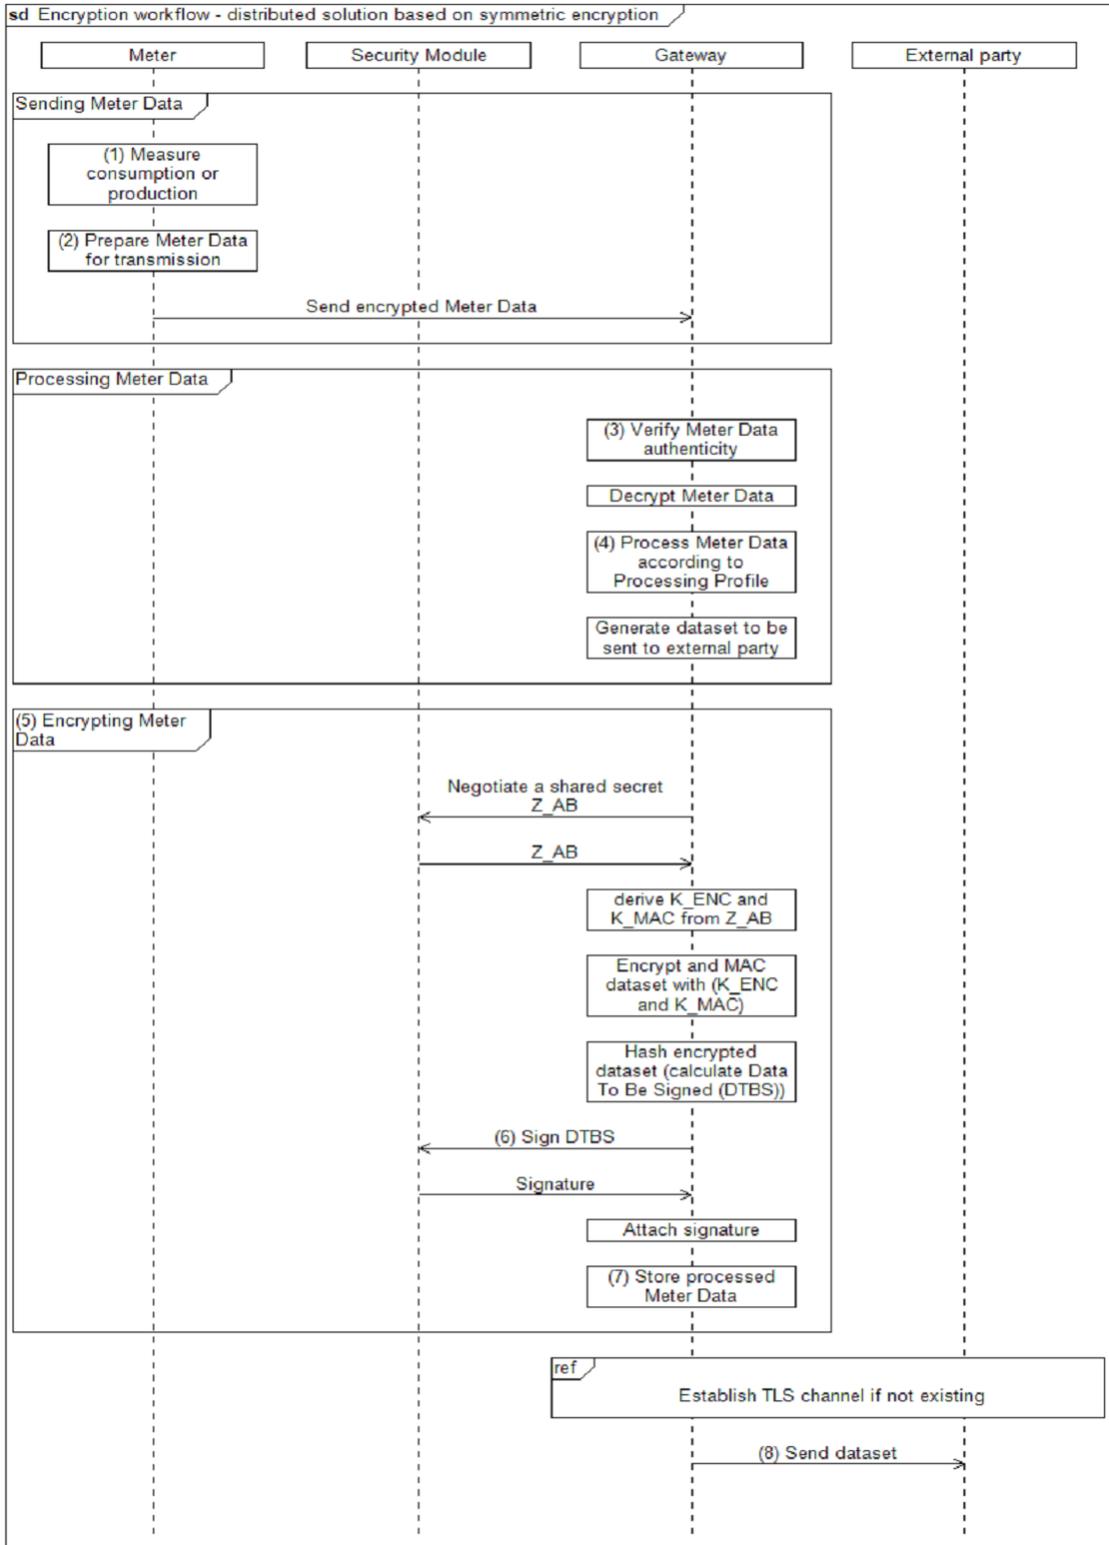

639 The following figure introduces the communication process between the Meter, the TOE
640 and external entities (focussing on billing-relevant Meter Data).

641 The basic information flow for Meter Data is as follows and shown in Figure 5:

- 642 1. The Meter measures the consumption or production of a certain commodity.
- 643 2. The Meter Data is prepared for transmission:
 - 644 a. The Meter Data is typically signed (typically using the services of an
645 integrated Security Module).
 - 646 b. If the communication between the Meter and the Gateway is performed
647 bidirectional, the Meter Data is transmitted via an encrypted and mutually
648 authenticated channel to the Gateway. Please note that the submission of
649 this information may be triggered by the Meter or the Gateway.
- 650 or
- 651 c. If a unidirectional communication is performed between the Meter and the
652 Gateway, the Meter Data is encrypted using a symmetric algorithm
653 (according to [TR-03109-3]) and facilitating a defined data structure to ensure
654 the authenticity and confidentiality.
- 655 3. The authenticity and integrity of the Meter Data is verified by the Gateway.
- 656 4. If (and only if) authenticity and integrity have been verified successfully, the
657 Meter Data is further processed by the Gateway according to the rules in the
658 Processing Profile else the cryptographic information flow will be cancelled.
- 659 5. The processed Meter Data is encrypted and integrity protected using CMS
660 (according to [TR-03109-1-I]) for the final recipient of the data²¹.
- 661 6. The processed Meter Data is signed using the services of the Security Module.
- 662 7. The processed and signed Meter Data may be stored for a certain amount of
663 time.

21 Optionally the Meter Data can additionally be signed before any encryption is done.

- 664 8. The processed Meter Data is finally submitted to an authorised external entity
 665 in the WAN via an encrypted and mutually authenticated channel.

666
 667 **Figure 5: Cryptographic information flow for distributed Meters and Gateway**
 668

669 **TOE life-cycle**

670 The life-cycle of the TOE can be separated into the following phases:

- 671 1. Development
- 672 2. Production
- 673 3. Pre-personalization at the developer's premises (without Security Module)
- 674 4. Pre-personalization and integration of Security Module
- 675 5. Installation and start of operation
- 676 6. Personalization
- 677 7. Normal operation

678 A detailed description of the phases #1 to #4 and #6 to #7 is provided in [TR-03109-1-
679 VI], while phase #5 is described in the TOE manuals.

680 The TOE will be delivered after phase “Pre-personalization and integration of Security
681 Module”. The phase “Personalization” will be performed when the TOE is started for the
682 first time after phase “Installation and start of operation”. The TOE delivery process is
683 specified in [AGD_SEC].

684 2 Conformance Claims

685 2.1 CC Conformance Claim

- 686 • This ST has been developed using Version 3.1 Revision 5 of Common Criteria
687 [CC].
- 688 • This ST is [CC] part 2 extended due to the use of FPR_CON.1.
- 689 • This ST claims conformance to [CC] part 3; no extended assurance compo-
690 nents have been defined.

691

692 2.2 PP Claim / Conformance Statement

693 This Security Target claims strict conformance to Protection Profile [PP_GW].

694

695 2.3 Package Claim

696 This Security Target claims an assurance package EAL4 augmented by AVA_VAN.5
697 and ALC_FLR.2 as defined in [CC] Part 3 for product certification.

698

699 2.4 Conformance Claim Rationale

700 This Security Target claims strict conformance to only one PP [PP_GW].

701 This Security Target is consistent to the TOE type according to [PP_GW] because the
702 TOE is a communication Gateway that provides different external communication inter-
703 faces and enables the data communication between these interfaces and connected IT
704 systems. It further collects processes, and stores Meter Data.

705 This Security Target is consistent to the security problem defined in [PP_GW].

706 This Security Target is consistent to the security objectives stated in [PP_GW], no secu-
707 rity objective of the PP is removed, nor added to this Security Target.

708 This Security Target is consistent to the security requirements stated in [PP_GW], no
709 security requirement of the PP is removed, nor added to this Security Target.

710

711 3 Security Problem Definition

712 3.1 External entities

713 The following external entities interact with the system consisting of Meter and Gateway.
 714 Those roles have been defined for the use in this Security Target. It is possible that a
 715 party implements more than one role in practice.

Role	Description
Consumer	The authorised individual or organization that “owns” the Meter Data. In most cases, this will be tenants or house owners consuming electricity, water, gas or further commodities. However, it is also possible that the consumer produces or stores energy (e.g. with their own solar plant).
Gateway Administrator	Authority that installs, configures, monitors, and controls the Smart Meter Gateway.
Service Technician	The authorised individual that is responsible for diagnostic purposes.
Authorised External Entity / User	Human or IT entity possibly interacting with the TOE from outside of the TOE boundary. In the context of this ST, the term <i>user</i> or <i>external entity</i> serve as a hypernym for all entities mentioned before.

716 **Table 5: Roles used in the Security Target**

717

718 3.2 Assets

719 The following tables introduces the relevant assets for this Security Target. The tables
 720 focus on the assets that are relevant for the Gateway and does not claim to provide an
 721 overview over all assets in the Smart Metering System or for other devices in the LMN.

722 The following Table 6 lists all assets typified as “user data”:

723

Asset	Description	Need for Protection
Meter Data	<p>Meter readings that allow calculation of the quantity of a commodity, e.g. electricity, gas, water or heat consumed over a period.</p> <p>Meter Data comprise Consumption or Production Data (billing-relevant) and grid status data (not billing-relevant).</p> <p>While billing-relevant data needs to have a relation to the Consumer, grid status data do not have to be directly related to a Consumer.</p>	<ul style="list-style-type: none"> • According to their specific need (see below)
System log data	<p>Log data from the</p> <ul style="list-style-type: none"> • system log. 	<ul style="list-style-type: none"> • Integrity • Confidentiality (only authorised SMGW administrators and Service technicians may read the log data)
Consumer log data	<p>Log data from the</p> <ul style="list-style-type: none"> • consumer log. 	<ul style="list-style-type: none"> • Integrity • Confidentiality (only authorised Consumers may read the log data)
Calibration log data	<p>Log data from the</p> <ul style="list-style-type: none"> • calibration log. 	<ul style="list-style-type: none"> • Integrity • Confidentiality (only authorised SMGW administrators may read the log data)
Consumption Data	<p>Billing-relevant part of Meter Data. Please note that the term <i>Consumption Data</i> implicitly includes Production Data.</p>	<ul style="list-style-type: none"> • Integrity and authenticity (comparable to the classical meter and its security requirements) • Confidentiality (due to privacy concerns)

Status Data	Grid status data, subset of Meter Data that is not billing-relevant ²² .	<ul style="list-style-type: none"> • Integrity and authenticity (comparable to the classical meter and its security requirements) • Confidentiality (due to privacy concerns)
Supplementary Data	The Gateway may be used for communication purposes by devices in the LMN or HAN. It may be that the functionality of the Gateway that is used by such a device is limited to pure (but secure) communication services. Data that is transmitted via the Gateway but that does not belong to one of the aforementioned data types is named <i>Supplementary Data</i> .	<ul style="list-style-type: none"> • According to their specific need
Data	The term <i>Data</i> is used as hypernym for <i>Meter Data and Supplementary Data</i> .	<ul style="list-style-type: none"> • According to their specific need
Gateway time	Date and time of the real-time clock of the Gateway. Gateway Time is used in Meter Data records sent to external entities.	<ul style="list-style-type: none"> • Integrity • Authenticity (when time is adjusted to an external reference time)
Personally Identifiable Information (PII)	Personally Identifiable Information refers to information that can be used to uniquely identify, contact, or locate a single person or can be used with other sources to uniquely identify a single individual.	<ul style="list-style-type: none"> • Confidentiality

724 **Table 6: Assets (User data)**

725 Table 7 lists all assets typified as “TSF data”:

²² Please note that these readings and data of the Meter which are not relevant for billing may require an explicit endorsement of the consumer(s).

Asset	Description	Need for Protection
Meter config (secondary asset)	Configuration data of the Meter to control its behaviour including the Meter identity. Configuration data is transmitted to the Meter via the Gateway.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality
Gateway config (secondary asset)	Configuration data of the Gateway to control its behaviour including the Gateway identity, the Processing Profiles and certificate/key material for authentication.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality
CLS config (secondary asset)	Configuration data of a CLS to control its behaviour. Configuration data is transmitted to the CLS via the Gateway.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality
Firmware update (secondary asset)	Firmware update that is downloaded by the TOE to update the firmware of the TOE.	<ul style="list-style-type: none"> • Integrity and authenticity
Ephemeral keys (secondary asset)	Ephemeral cryptographic material used by the TOE for cryptographic operations.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality

726

Table 7: Assets (TSF data)

727

728 3.3 Assumptions

729 In this threat model the following assumptions about the environment of the components
730 need to be taken into account in order to ensure a secure operation.

731 **A.ExternalPrivacy** It is assumed that authorised and authenticated external
732 entities receiving any kind of privacy-relevant data or bill-
733 ing-relevant data and the applications that they operate are
734 trustworthy (in the context of the data that they receive) and
735 do not perform unauthorised analyses of this data with re-
736 spect to the corresponding Consumer(s).

737 **A.TrustedAdmins** It is assumed that the Gateway Administrator and the Ser-
738 vice Technician are trustworthy and well-trained.

739 **A.PhysicalProtection** It is assumed that the TOE is installed in a non-public en-
740 vironment within the premises of the Consumer which pro-
741 vides a basic level of physical protection. This protection
742 covers the TOE, the Meter(s) that the TOE communicates
743 with and the communication channel between the TOE and
744 its Security Module.

745 **A.ProcessProfile** The Processing Profiles that are used when handling data
746 are assumed to be trustworthy and correct.

747 **A.Update** It is assumed that firmware updates for the Gateway that
748 can be provided by an authorised external entity have un-
749 dergone a certification process according to this Security
750 Target before they are issued and can therefore be as-
751 sumed to be correctly implemented. It is further assumed
752 that the external entity that is authorised to provide the up-
753 date is trustworthy and will not introduce any malware into
754 a firmware update.

755 **A.Network** It is assumed that

- 756 • a WAN network connection with a sufficient reliabil-
757 ity and bandwidth for the individual situation is
758 available,
- 759 • one or more trustworthy sources for an update of
760 the system time are available in the WAN,

- 761
- 762
- 763
- 764
- 765
- the Gateway is the only communication gateway for Meters in the LMN²³,
 - if devices in the HAN have a separate connection to parties in the WAN (beside the Gateway) this connection is appropriately protected.

766 **A.Keygen**

767

768

769

It is assumed that the ECC key pair for a Meter (TLS) is generated securely according to [TR-03109-3] and brought into the Gateway in a secure way by the Gateway Administrator.

770 **Application Note 1:**

771

772

773

774

This ST acknowledges that the Gateway cannot be completely protected against unauthorised physical access by its environment. However, it is important for the overall security of the TOE that it is not installed within a public environment.

775

776

777

778

779

The level of physical protection that is expected to be provided by the environment is the same level of protection that is expected for classical meters that operate according to the regulations of the national calibration authority [TR-03109-1].

780 **Application Note 2:**

781

782

783

784

785

786

787

The Processing Profiles that are used for information flow control as referred to by A.ProcessProfile are an essential factor for the preservation of the privacy of the Consumer. The Processing Profiles are used to determine which data shall be sent to which entity at which frequency and how data are processed, e.g. whether the data needs to be related to the Consumer (because it is used for billing purposes) or whether the data shall be pseudonymised.

788

789

The Processing Profiles shall be visible for the Consumer to allow a transparent communication.

23 Please note that this assumption holds on a logical level rather than on a physical one. It may be possible that the Meters in the LMN have a physical connection to other devices that would in theory also allow a communication. This is specifically true for wireless communication technologies. It is further possible that signals of Meters are amplified by other devices or other Meters on the physical level without violating this assumption. However, it is assumed that the Meters do only communicate with the TOE and that only the TOE is able to decrypt the data sent by the Meter.

790 It is essential that Processing Profiles correctly define the
791 amount of information that must be sent to an external en-
792 tity. Exact regulations regarding the Processing Profiles
793 and the Gateway Administrator are beyond the scope of
794 this Security Target.

795

796 **3.4 Threats**

797 The following sections identify the threats that are posed against the assets handled by
798 the Smart Meter System. Those threats are the result of a threat model that has been
799 developed for the whole Smart Metering System first and then has been focussed on
800 the threats against the Gateway. It should be noted that the threats in the following par-
801 agraphs consider two different kinds of attackers:

- 802 • Attackers having physical access to Meter, Gateway, a connection between
803 these components or local logical access to any of the interfaces (local at-
804 tacker), trying to disclose or alter assets while stored in the Gateway or while
805 transmitted between Meters in the LMN and the Gateway. Please note that the
806 following threat model assumes that the local attacker has less motivation than
807 the WAN attacker as a successful attack of a local attacker will always only
808 impact one Gateway. Please further note that the local attacker includes au-
809 thorised individuals like consumers.
- 810 • An attacker located in the WAN (WAN attacker) trying to compromise the con-
811 fidentiality and/or integrity of the processed Meter Data and or configuration
812 data transmitted via the WAN, or attacker trying to conquer a component of the
813 infrastructure (i.e. Meter, Gateway or Controllable Local System) via the WAN
814 to cause damage to a component itself or to the corresponding grid (e.g. by
815 sending forged Meter Data to an external entity).

816 The specific rationale for this situation is given by the expected benefit of a successful
817 attack. An attacker who has to have physical access to the TOE that they are attacking,
818 will only be able to compromise one TOE at a time. So the effect of a successful attack
819 will always be limited to the attacked TOE. A logical attack from the WAN side on the
820 other hand may have the potential to compromise a large amount of TOEs.

821

822	T.DataModificationLocal	A local attacker may try to modify (i.e. alter, delete, insert, replay or redirect) Meter Data when transmitted between Meter and Gateway, Gateway and Consumer, or Gateway and external entities. The objective of the attacker may be to alter billing-relevant information or grid status information. The attacker may perform the attack via any interface (LMN, HAN, or WAN).
823		
824		
825		
826		
827		
828		
829		
830		In order to achieve the modification, the attacker may also try to modify secondary assets like the firmware or configuration parameters of the Gateway.
831		
832	T.DataModificationWAN	A WAN attacker may try to modify (i.e. alter, delete, insert, replay or redirect) Meter Data, Gateway config data, Meter config data, CLS config data or a firmware update when transmitted between the Gateway and an external entity in the WAN.
833		
834		
835		
836		
837		
838		
839		
840		When trying to modify Meter Data, it is the objective of the WAN attacker to modify billing-relevant information or grid status data.
841		
842		
843		
844	T.TimeModification	A local attacker or WAN attacker may try to alter the Gateway time. The motivation of the attacker could be e.g. to change the relation between date/time and measured consumption or production values in the Meter Data records (e.g. to influence the balance of the next invoice).
845		
846		
847		
848		
849	T.DisclosureWAN	A WAN attacker may try to violate the privacy of the Consumer by disclosing Meter Data or configuration data (Meter config, Gateway config or CLS config) or parts of it when transmitted between Gateway and external entities in the WAN.
850		
851		
852		
853		

854	T.DisclosureLocal	A local attacker may try to violate the privacy of the Consumer by disclosing Meter Data transmitted between the TOE and the Meter. This threat is of specific importance if Meters of more than one Consumer are served by one Gateway.
855		
856		
857		
858		
859	T.Infrastructure	A WAN attacker may try to obtain control over Gateways, Meters or CLS via the TOE, which enables the WAN attacker to cause damage to Consumers or external entities or the grids used for commodity distribution (e.g. by sending wrong data to an external entity).
860		
861		
862		
863		
864		A WAN attacker may also try to conquer a CLS in the HAN first in order to logically attack the TOE from the HAN side.
865		
866	T.ResidualData	By physical and/or logical means a local attacker or a WAN attacker may try to read out data from the Gateway, which travelled through the Gateway before and which are no longer needed by the Gateway (i.e. Meter Data, Meter config, or CLS config).
867		
868		
869		
870		
871	T.ResidentData	A WAN or local attacker may try to access (i.e. read, alter, delete) information to which they don't have permission to while the information is stored in the TOE.
872		
873		
874		While the WAN attacker only uses the logical interface of the TOE that is provided into the WAN, the local attacker may also physically access the TOE.
875		
876		
877	T.Privacy	A WAN attacker may try to obtain more detailed information from the Gateway than actually required to fulfil the tasks defined by its role or the contract with the Consumer. This includes scenarios in which an external entity that is primarily authorised to obtain information from the TOE tries to obtain more information than the information that has been authorised as well as scenarios in which an attacker who is not authorised at all tries to obtain information.
878		
879		
880		
881		
882		
883		
884		
885		
886		

887 3.5 Organizational Security Policies

888 This section lists the organizational security policies (OSP) that the Gateway shall com-
889 ply with:

890 **OSP.SM** The TOE shall use the services of a certified Security Mod-
891 ule for

- 892 • verification of digital signatures,
- 893 • generation of digital signatures,
- 894 • key agreement,
- 895 • key transport,
- 896 • key storage,
- 897 • Random Number Generation,

898 The Security Module shall be certified according to
899 [SecModPP] and shall be used in accordance with its rele-
900 vant guidance documentation.

901 **OSP.Log** The TOE shall maintain a set of log files as defined in [TR-
902 03109-1] as follows:

- 903 1. A system log of relevant events in order to allow an
904 authorised Gateway Administrator to analyse the
905 status of the TOE. The TOE shall also analyse the
906 system log automatically for a cumulation of secu-
907 rity relevant events.
- 908 2. A consumer log that contains information about the
909 information flows that have been initiated to the
910 WAN and information about the Processing Profiles
911 causing this information flow as well as the billing-
912 relevant information.
- 913 3. A calibration log (as defined in chapter 6.2.1) that
914 provides the Gateway Administrator with a possibil-
915 ity to review calibration relevant events.

916 The TOE shall further limit access to the information in the
917 different log files as follows:

- 918 1. Access to the information in the system log shall
919 only be allowed for an authorised Gateway

920 Administrator via the IF_GW_WAN interface of the
921 TOE and an authorised Service Technician via the
922 IF_GW_SRV interface of the TOE.

923 2. Access to the information in the calibration log shall
924 only be allowed for an authorised Gateway Admin-
925 istrator via the IF_GW_WAN interface of the TOE.

926 3. Access to the information in the consumer log shall
927 only be allowed for an authorised Consumer via the
928 IF_GW_CON interface of the TOE. The Consumer
929 shall only have access to their own information.

930 The system log may overwrite the oldest events in case
931 that the audit trail gets full.

932 For the consumer log the TOE shall ensure that a sufficient
933 amount of events is available (in order to allow a Consumer
934 to verify an invoice) but may overwrite older events in case
935 that the audit trail gets full.

936 For the calibration log, however, the TOE shall ensure the
937 availability of all events over the lifetime of the TOE.

938 4 Security Objectives

939 4.1 Security Objectives for the TOE

940 O.Firewall

941 The TOE shall serve as the connection point for the con-
942 nected devices within the LAN to external entities within
943 the WAN and shall provide firewall functionality in order to
944 protect the devices of the LMN and HAN (as long as they
945 use the Gateway) and itself against threats from the WAN
side.

946 The firewall:

- 947 • shall allow only connections established from HAN
948 or the TOE itself to the WAN (i.e. from devices in
949 the HAN to external entities in the WAN or from the
950 TOE itself to external entities in the WAN),
- 951 • shall provide a wake-up service on the WAN side
952 interface,
- 953 • shall not allow connections from the LMN to the
954 WAN,
- 955 • shall not allow any other services being offered on
956 the WAN side interface,
- 957 • shall not allow connections from the WAN to the
958 LAN or to the TOE itself,
- 959 • shall enforce communication flows by allowing traf-
960 fic from CLS in the HAN to the WAN only if confi-
961 dentiality-protected and integrity-protected and if
962 endpoints are authenticated.

963 O.SeparateIF

964 The TOE shall have physically separated ports for the
965 LMN, the HAN and the WAN and shall automatically detect
966 during its self test whether connections (wired or wireless),
if any, are wrongly connected.

967 **Application Note 3:** O.SeparateIF refers to physical inter-
968 faces and must not be fulfilled by a pure logical separation
969 of one physical interface only.

970	O.Conceal	To protect the privacy of its Consumers, the TOE shall conceal the communication with external entities in the WAN in order to ensure that no privacy-relevant information may be obtained by analysing the frequency, load, size or the absence of external communication. ²⁴
971		
972		
973		
974		
975	O.Meter	The TOE receives or polls information about the consumption or production of different commodities from one or multiple Meters and is responsible for handling this Meter Data.
976		
977		
978		
979		This includes that:
980		<ul style="list-style-type: none">• The TOE shall ensure that the communication to the Meter(s) is established in an Gateway Administrator-definable interval or an interval as defined by the Meter,
981		
982		
983		
984		<ul style="list-style-type: none">• the TOE shall enforce encryption and integrity protection for the communication with the Meter²⁵,
985		
986		<ul style="list-style-type: none">• the TOE shall verify the integrity and authenticity of the data received from a Meter before handling it further,
987		
988		
989		<ul style="list-style-type: none">• the TOE shall process the data according to the definition in the corresponding Processing Profile,
990		
991		<ul style="list-style-type: none">• the TOE shall encrypt the processed Meter Data for the final recipient, sign the data and
992		
993		<ul style="list-style-type: none">• deliver the encrypted data to authorised external entities as defined in the corresponding Processing Profiles facilitating an encrypted channel,
994		
995		
996		<ul style="list-style-type: none">• the TOE shall store processed Meter Data if an external entity cannot be reached and re-try to send
997		

²⁴ It should be noted that this requirement only applies to communication flows in the WAN.

²⁵ It is acknowledged that the implementation of a secure channel between the Meter and the Gateway is a security function of both units. The TOE as defined in this Security Target only has a limited possibility to secure this communication as both sides have to sign responsible for the quality of a cryptographic connection. However, it should be noted that the encryption of this channel only needs to protect against the Local Attacker possessing a basic attack potential and that the Meter utilises the services of its Security Module to negotiate the channel.

998 the data until a configurable number of unsuccessful
 999 retrials has been reached,
 1000 • the TOE shall pseudonymize the data for parties
 1001 that do not need the relation between the pro-
 1002 cessed Meter Data and the identity of the Con-
 1003 sumer.

1004 **O.Crypt**

1005 The TOE shall provide cryptographic functionality as fol-
 lows:

- 1006 • authentication, integrity protection and encryption
- 1007 of the communication and data to external entities
- 1008 in the WAN,
- 1009 • authentication, integrity protection and encryption
- 1010 of the communication to the Meter,
- 1011 • authentication, integrity protection and encryption
- 1012 of the communication to the Consumer,
- 1013 • replay detection for all communications with exter-
 1014 nal entities,
- 1015 • encryption of the persistently stored TSF and user
 1016 data of the TOE²⁶.

1017 In addition, the TOE shall generate the required keys uti-
 1018 lising the services of its Security Module²⁷, ensure that the
 1019 keys are only used for an acceptable amount of time and
 1020 destroy ephemeral²⁸ keys if no longer needed.²⁹

1021 **O.Time**

1022 The TOE shall provide reliable time stamps and update
 1023 its internal clock in regular intervals by retrieving reliable
 1024 time information from a dedicated reliable source in the
 WAN.

²⁶ The encryption of the persistent memory shall support the protection of the TOE against local attacks.

²⁷ Please refer to chapter 1.4.7 for an overview on how the cryptographic functions are distributed between the TOE and its Security Module.

²⁸ This objective addresses the destruction of ephemeral keys only because all keys that need to be stored persistently are stored in the Security Module.

²⁹ Please refer to chapter F.9 of part 2 of [CC] for more detailed information about what kind of information this objective applies to.

1025	O.Protect	The TOE shall implement functionality to protect its security functions against malfunctions and tampering.
1026		
1027		Specifically, the TOE shall
1028		<ul style="list-style-type: none"> • encrypt its TSF and user data as long as it is not in use,
1029		
1030		<ul style="list-style-type: none"> • overwrite any information that is no longer needed to ensure that it is no longer available via the external interfaces of the TOE³⁰,
1031		
1032		
1033		<ul style="list-style-type: none"> • monitor user data and the TOE firmware for integrity errors,
1034		
1035		<ul style="list-style-type: none"> • contain a test that detects whether the interfaces for WAN and LAN are separate,
1036		
1037		<ul style="list-style-type: none"> • have a fail-safe design that specifically ensures that no malfunction can impact the delivery of a commodity (e.g. energy, gas, heat or water)³¹,
1038		
1039		
1040		<ul style="list-style-type: none"> • make any physical manipulation within the scope of the intended environment detectable for the Consumer and Gateway Administrator.
1041		
1042		
1043	O.Management	The TOE shall only provide authorised Gateway Administrators with functions for the management of the security features.
1044		
1045		
1046		The TOE shall ensure that any change in the behaviour of the security functions can only be achieved from the WAN side interface. Any management activity from a local interface may only be read only.
1047		
1048		
1049		
1050		Further, the TOE shall implement a secure mechanism to update the firmware of the TOE that ensures that only authorised entities are able to provide updates for the TOE
1051		
1052		

³⁰ Please refer to chapter F.9 of part 2 of [CC] for more detailed information about what kind of information this objective applies to.

³¹ Indeed this Security Target acknowledges that the Gateway and the Meters have no possibility at all to impact the delivery of a commodity. Even an intentional stop of the delivery of a certain commodity is not within the scope of this Security Target. It should however be noted that such a functionality may be realised by a CLS that utilises the services of the TOE for its communication.

1053 and that only authentic and integrity protected updates are
1054 applied.

1055 **O.Log**

1056 The TOE shall maintain a set of log files as defined in [TR-
1057 03109-1] as follows:

- 1058 1. A system log of relevant events in order to allow an
1059 authorised Gateway Administrator or an authorised
1060 Service Technician to analyse the status of the
1061 TOE. The TOE shall also analyse the system log
1062 automatically for a cumulation of security relevant
1063 events.
- 1064 2. A consumer log that contains information about the
1065 information flows that have been initiated to the
1066 WAN and information about the Processing Profiles
1067 causing this information flow as well as the billing-
1068 relevant information and information about the sys-
1069 tem status (including relevant error messages).
- 1070 3. A calibration log that provides the Gateway Admin-
1071 istrator with a possibility to review calibration rele-
1072 vant events.

1072 The TOE shall further limit access to the information in the
1073 different log files as follows:

- 1074 1. Access to the information in the system log shall
1075 only be allowed for an authorised Gateway Admin-
1076 istrator via IF_GW_WAN or for an authorised Ser-
1077 vice Technician via IF_GW_SRV.
- 1078 2. Access to the information in the consumer log shall
1079 only be allowed for an authorised Consumer via the
1080 IF_GW_CON interface of the TOE and via a se-
1081 cured (i.e. confidentiality and integrity protected)
1082 connection. The Consumer shall only have access
1083 to their own information.
- 1084 3. Read-only access to the information in the calibra-
1085 tion log shall only be allowed for an authorised

1086 Gateway Administrator via the WAN interface of the
1087 TOE.

1088 The system log may overwrite the oldest events in case
1089 that the audit trail gets full.

1090 For the consumer log, the TOE shall ensure that a suffi-
1091 cient amount of events is available (in order to allow a Con-
1092 sumer to verify an invoice) but may overwrite older events
1093 in case that the audit trail gets full.

1094 For the calibration log however, the TOE shall ensure the
1095 availability of all events over the lifetime of the TOE.

1096 **O.Access** The TOE shall control the access of external entities in
1097 WAN, HAN or LMN to any information that is sent to, from
1098 or via the TOE via its external interfaces³². Access control
1099 shall depend on the destination interface that is used to
1100 send that information.

1101

1102 **4.2 Security Objectives for the Operational Environment**

1103 **OE.ExternalPrivacy** Authorised and authenticated external entities receiving
1104 any kind of private or billing-relevant data shall be trustwor-
1105 thy and shall not perform unauthorised analyses of these
1106 data with respect to the corresponding consumer(s).

1107 **OE.TrustedAdmins** The Gateway Administrator and the Service Technician
1108 shall be trustworthy and well-trained.

1109 **OE.PhysicalProtection** The TOE shall be installed in a non-public environment
1110 within the premises of the Consumer that provides a basic
1111 level of physical protection. This protection shall cover the
1112 TOE, the Meters that the TOE communicates with and the
1113 communication channel between the TOE and its Security

³² While in classical access control mechanisms the Gateway Administrator gets complete access, the TOE also maintains a set of information (specifically the consumer log) to which Gateway Administrators have restricted access.

1114		Module. Only authorised individuals may physically access
1115		the TOE.
1116	OE.Profile	The Processing Profiles that are used when handling data
1117		shall be obtained from a trustworthy and reliable source
1118		only.
1119	OE.SM	The environment shall provide the services of a certified
1120		Security Module for
1121		<ul style="list-style-type: none">• verification of digital signatures,
1122		<ul style="list-style-type: none">• generation of digital signatures,
1123		<ul style="list-style-type: none">• key agreement,
1124		<ul style="list-style-type: none">• key transport,
1125		<ul style="list-style-type: none">• key storage,
1126		<ul style="list-style-type: none">• Random Number Generation.
1127		The Security Module used shall be certified according to
1128		[SecModPP] and shall be used in accordance with its rele-
1129		vant guidance documentation.
1130	OE.Update	The firmware updates for the Gateway that can be pro-
1131		vided by an authorised external entity shall undergo a cer-
1132		tification process according to this Security Target before
1133		they are issued to show that the update is implemented
1134		correctly. The external entity that is authorised to provide
1135		the update shall be trustworthy and ensure that no mal-
1136		ware is introduced via a firmware update.
1137	OE.Network	It shall be ensured that
1138		<ul style="list-style-type: none">• a WAN network connection with a sufficient reliabil-
1139		ity and bandwidth for the individual situation is
1140		available,
1141		<ul style="list-style-type: none">• one or more trustworthy sources for an update of
1142		the system time are available in the WAN,
1143		<ul style="list-style-type: none">• the Gateway is the only communication gateway for
1144		Meters in the LMN,

- 1145 if devices in the HAN have a separate connection
- 1146 to parties in the WAN (beside the Gateway) this
- 1147 connection is appropriately protected.

1148 **OE.Keygen** It shall be ensured that the ECC key pair for a Meter (TLS)

1149 is generated securely according to the [TR-03109-3]. It

1150 shall also be ensured that the keys are brought into the

1151 Gateway in a secure way by the Gateway Administrator.

1152

1153 4.3 Security Objective Rationale

1154 4.3.1 Overview

1155 The following table gives an overview how the assumptions, threats, and organisational

1156 security policies are addressed by the security objectives. The text of the following sec-

1157 tions justifies this more in detail.

	O.Firewall	O.SeparateIF	O.Conceal	O.Meter	O.Crypt	O.Time	O.Protect	O.Management	O.Log	O.Access	OE.SM	OE.ExternalPrivacy	OE.TrustedAdmins	OE.Physical Protec-	OE.Profile	OE.Update	OE.Network	OE.Keygen

Table 8: Rationale for Security Objectives

1158

1159

4.3.2 Countering the threats

The following sections provide more detailed information on how the threats are countered by the security objectives for the TOE and its operational environment.

1163

4.3.2.1 General objectives

The security objectives **O.Protect**, **O.Management** and **OE.TrustedAdmins** contribute to counter each threat and contribute to each OSP.

O.Management is indispensable as it defines the requirements around the management of the Security Functions. Without a secure management no TOE can be secure. Also **OE.TrustedAdmins** contributes to this aspect as it provides the requirements on the availability of a trustworthy Gateway Administrator and Service Technician. **O.Protect** is present to ensure that all security functions are working as specified.

Those general objectives will not be addressed in detail in the following paragraphs.

1172

1173 4.3.2.2 T.DataModificationLocal

1174 The threat **T.DataModificationLocal** is countered by a combination of the security ob-
1175 jectives **O.Meter**, **O.Crypt**, **O.Log** and **OE.PhysicalProtection**.

1176 **O.Meter** defines that the TOE will enforce the encryption of communication when receiv-
1177 ing Meter Data from the Meter. **O.Crypt** defines the required cryptographic functionality.
1178 The objectives together ensure that the communication between the Meter and the TOE
1179 cannot be modified or released.

1180 **OE.PhysicalProtection** is of relevance as it ensures that access to the TOE is limited.

1181 4.3.2.3 T.DataModificationWAN

1182 The threat **T.DataModificationWAN** is countered by a combination of the security ob-
1183 jectives **O.Firewall** and **O.Crypt**.

1184 **O.Firewall** defines the connections for the devices within the LAN to external entities
1185 within the WAN and shall provide firewall functionality in order to protect the devices of
1186 the LMN and HAN (as long as they use the Gateway) and itself against threats from the
1187 WAN side. **O.Crypt** defines the required cryptographic functionality. Both objectives to-
1188 gether ensure that the data transmitted between the TOE and the WAN cannot be mod-
1189 ified by a WAN attacker.

1190 4.3.2.4 T.TimeModification

1191 The threat **T.TimeModification** is countered by a combination of the security objectives
1192 **O.Time**, **O.Crypt** and **OE.PhysicalProtection**.

1193 **O.Time** defines that the TOE needs a reliable time stamp mechanism that is also up-
1194 dated from reliable sources regularly in the WAN. **O.Crypt** defines the required crypto-
1195 graphic functionality for the communication to external entities in the WAN. Therewith,
1196 O.Time and O.Crypt are the core objective to counter the threat T.TimeModification.

1197 **OE.PhysicalProtection** is of relevance as it ensures that access to the TOE is limited.

1198 4.3.2.5 T.DisclosureWAN

1199 The threat **T.DisclosureWAN** is countered by a combination of the security objectives
1200 **O.Firewall**, **O.Conceal** and **O.Crypt**.

1201 **O.Firewall** defines the connections for the devices within the LAN to external entities
1202 within the WAN and shall provide firewall functionality in order to protect the devices of
1203 the LMN and HAN (as long as they use the Gateway) and itself against threats from the
1204 WAN side. **O.Crypt** defines the required cryptographic functionality. Both objectives

1205 together ensure that the communication between the Meter and the TOE cannot be dis-
1206 closed.

1207 **O.Conceal** ensures that no information can be disclosed based on additional character-
1208 istics of the communication like frequency, load or the absence of a communication.

1209 4.3.2.6 T.DisclosureLocal

1210 The threat **T.DisclosureLocal** is countered by a combination of the security objectives
1211 **O.Meter**, **O.Crypt** and **OE.PhysicalProtection**.

1212 **O.Meter** defines that the TOE will enforce the encryption and integrity protection of com-
1213 munication when polling or receiving Meter Data from the Meter. **O.Crypt** defines the
1214 required cryptographic functionality. Both objectives together ensure that the communi-
1215 cation between the Meter and the TOE cannot be disclosed.

1216 **OE.PhysicalProtection** is of relevance as it ensures that access to the TOE is limited.

1217 4.3.2.7 T.Infrastructure

1218 The threat **T.Infrastructure** is countered by a combination of the security objectives
1219 **O.Firewall**, **O.SeparateIF**, **O.Meter** and **O.Crypt**.

1220 **O.Firewall** is the core objective that counters this threat. It ensures that all communica-
1221 tion flows to the WAN are initiated by the TOE. The fact that the TOE does not offer any
1222 services to the WAN side and will not react to any requests (except the wake-up call)
1223 from the WAN is a significant aspect in countering this threat. Further the TOE will only
1224 communicate using encrypted channels to authenticated and trustworthy parties which
1225 mitigates the possibility that an attacker could try to hijack a communication.

1226 **O.Meter** defines that the TOE will enforce the encryption and integrity protection for the
1227 communication with the Meter.

1228 **O.SeparateIF** facilitates the disjunction of the WAN from the LMN.

1229 **O.Crypt** supports the mitigation of this threat by providing the required cryptographic
1230 primitives.

1231 4.3.2.8 T.ResidualData

1232 The threat **T.ResidualData** is mitigated by the security objective **O.Protect** as this se-
1233 curity objective defines that the TOE shall delete information as soon as it is no longer
1234 used. Assuming that a TOE follows this requirement, an attacker cannot read out any
1235 residual information as it does simply not exist.

1236 4.3.2.9 T.ResidentData

1237 The threat **T.ResidentData** is countered by a combination of the security objectives
1238 **O.Access**, **O.Firewall**, **O.Protect** and **O.Crypt**. Further, the environment (**OE.Physi-**
1239 **calProtection** and **OE.TrustedAdmins**) contributes to this.

1240 **O.Access** defines that the TOE shall control the access of users to information via the
1241 external interfaces.

1242 The aspect of a local attacker with physical access to the TOE is covered by a combi-
1243 nation of **O.Protect** (defining the detection of physical manipulation) and **O.Crypt** (re-
1244 quiring the encryption of persistently stored TSF and user data of the TOE). In addition,
1245 the physical protection provided by the environment (**OE.PhysicalProtection**) and the
1246 Gateway Administrator (**OE.TrustedAdmins**) who could realise a physical manipulation
1247 contribute to counter this threat.

1248 The aspect of a WAN attacker is covered by **O.Firewall** as this objective ensures that
1249 an adequate level of protection is realised against attacks from the WAN side.

1250 4.3.2.10 T.Privacy

1251 The threat **T.Privacy** is primarily addressed by the security objectives **O.Meter**, **O.Crypt**
1252 and **O.Firewall** as these objective ensures that the TOE will only distribute Meter Data
1253 to external parties in the WAN as defined in the corresponding Processing Profiles and
1254 that the data will be protected for the transfer. **OE.Profile** is present to ensure that the
1255 Processing Profiles are obtained from a trustworthy and reliable source only.

1256 Finally, **O.Conceal** ensures that an attacker cannot obtain the relevant information for
1257 this threat by observing external characteristics of the information flow.

1258 **4.3.3 Coverage of organisational security policies**

1259 The following sections provide more detailed information about how the security objec-
1260 tives for the environment and the TOE cover the organizational security policies.

1261 4.3.3.1 OSP.SM

1262 The Organizational Security Policy **OSP.SM** that mandates that the TOE utilises the ser-
1263 vices of a certified Security Module is directly addressed by the security objectives
1264 **OE.SM** and **O.Crypt**. The objective **OE.SM** addresses the functions that the Security
1265 Module shall be utilised for as defined in **OSP.SM** and also requires a certified Security
1266 Module. **O.Crypt** defines the cryptographic functionalities for the TOE itself. In this

1267 context, it has to be ensured that the Security Module is operated in accordance with its
1268 guidance documentation.

1269 4.3.3.2 OSP.Log

1270 The Organizational Security Policy **OSP.Log** that mandates that the TOE maintains an
1271 audit log is directly addressed by the security objective for the TOE **O.Log**.

1272 **O.Access** contributes to the implementation of the OSP as it defines that also Gateway
1273 Administrators are not allowed to read/modify all data. This is of specific importance to
1274 ensure the confidentiality and integrity of the log data as is required by the **OSP.Log**.

1275 4.3.4 Coverage of assumptions

1276 The following sections provide more detailed information about how the security objec-
1277 tives for the environment cover the assumptions.

1278 4.3.4.1 A.ExternalPrivacy

1279 The assumption **A.ExternalPrivacy** is directly and completely covered by the security
1280 objective **OE.ExternalPrivacy**. The assumption and the objective for the environment
1281 are drafted in a way that the correspondence is obvious.

1282 4.3.4.2 A.TrustedAdmins

1283 The assumption **A.TrustedAdmins** is directly and completely covered by the security
1284 objective **OE.TrustedAdmins**. The assumption and the objective for the environment
1285 are drafted in a way that the correspondence is obvious.

1286 4.3.4.3 A.PhysicalProtection

1287 The assumption **A.PhysicalProtection** is directly and completely covered by the secu-
1288 rity objective **OE.PhysicalProtection**. The assumption and the objective for the envi-
1289 ronment are drafted in a way that the correspondence is obvious.

1290 4.3.4.4 A.ProcessProfile

1291 The assumption **A.ProcessProfile** is directly and completely covered by the security
1292 objective **OE.Profile**. The assumption and the objective for the environment are drafted
1293 in a way that the correspondence is obvious.

1294 4.3.4.5 A.Update

1295 The assumption **A.Update** is directly and completely covered by the security objective
1296 **OE.Update**. The assumption and the objective for the environment are drafted in a way
1297 that the correspondence is obvious.

1298 4.3.4.6 A.Network

1299 The assumption **A.Network** is directly and completely covered by the security objective
1300 **OE.Network**. The assumption and the objective for the environment are drafted in a way
1301 that the correspondence is obvious.

1302 4.3.4.7 A.Keygen

1303 The assumption **A.Network** is directly and completely covered by the security objective
1304 **OE.Network**. The assumption and the objective for the environment are drafted in a way
1305 that the correspondence is obvious.

1306

1307 5 Extended Component definition

1308 5.1 Communication concealing (FPR_CON)

1309 The additional family Communication concealing (FPR_CON) of the Class FPR (Pri-
 1310 vacy) is defined here to describe the specific IT security functional requirements of the
 1311 TOE. The TOE shall prevent attacks against Personally Identifiable Information (PII) of
 1312 the Consumer that may be obtained by an attacker by observing the encrypted commu-
 1313 nication of the TOE with remote entities.

1314

1315 5.2 Family behaviour

1316 This family defines requirements to mitigate attacks against communication channels in
 1317 which an attacker tries to obtain privacy relevant information based on characteristics of
 1318 an encrypted communication channel. Examples include but are not limited to an analy-
 1319 sis of the frequency of communication or the transmitted workload.

1320

1321 5.3 Component levelling

1322 FPR_CON: Communication concealing -----1

1323

1324 5.4 Management

1325 The following actions could be considered for the management functions in FMT:

1326 a. Definition of the interval in FPR_CON.1.2 if definable within the operational
 1327 phase of the TOE.

1328 b.

1329 5.5 Audit

1330 There are no auditable events foreseen.

1331

1332 5.6 Communication concealing (FPR_CON.1)

1333 Hierarchical to: No other components.

1334 Dependencies: No dependencies.

1335 FPR_CON.1.1 The TSF shall enforce the [assignment: *information*
1336 *flow policy*] in order to ensure that no personally iden-
1337 tifiable information (PII) can be obtained by an analysis
1338 of [assignment: *characteristics of the information flow*
1339 *that need to be concealed*].

1340 FPR_CON.1.2 The TSF shall connect to [assignment: *list of external*
1341 *entities*] in intervals as follows [selection: *weekly,*
1342 *daily, hourly, [assignment: other interval]*] to conceal
1343 the data flow.

1344 6 Security Requirements

1345 6.1 Overview

1346 This chapter describes the security functional and the assurance requirements which
 1347 have to be fulfilled by the TOE. Those requirements comprise functional components
 1348 from part 2 of [CC] and the assurance components as defined for the Evaluation Assur-
 1349 ance Level 4 from part 3 of [CC].

1350 The following notations are used:

- 1351 • **Refinement** operation (denoted by **bold text**): is used to add details to a re-
 1352 quirement, and thus further restricts a requirement. In case that a word has
 1353 been deleted from the original text this refinement is indicated by crossed out
 1354 ~~bold text~~.
- 1355 • **Selection** operation (denoted by underlined text): is used to select one or more
 1356 options provided by the [CC] in stating a requirement.
- 1357 • **Assignment** operation (denoted by *italicised text*): is used to assign a specific
 1358 value to an unspecified parameter, such as the length of a password.
- 1359 • **Iteration** operation: are identified with a suffix in the name of the SFR (e.g.
 1360 FDP_IFC.2/FW).

1361 It should be noted that the requirements in the following chapters are not necessarily be
 1362 ordered alphabetically. Where useful the requirements have been grouped.

1363 The following table summarises all TOE security functional requirements of this ST:

Class FAU: Security Audit	
FAU_ARP.1/SYS	Security alarms for system log
FAU_GEN.1/SYS	Audit data generation for system log
FAU_SAA.1/SYS	Potential violation analysis for system log
FAU_SAR.1/SYS	Audit review for system log
FAU_STG.4/SYS	Prevention of audit data loss for the system log
FAU_GEN.1/CON	Audit data generation for consumer log

FAU_SAR.1/CON	Audit review for consumer log
FAU_STG.4/CON	Prevention of audit data loss for the consumer log
FAU_GEN.1/CAL	Audit data generation for calibration log
FAU_SAR.1/CAL	Audit review for calibration log
FAU_STG.4/CAL	Prevention of audit data loss for the calibration log
FAU_GEN.2	User identity association
FAU_STG.2	Guarantees of audit data availability
Class FCO: Communication	
FCO_NRO.2	Enforced proof of origin
Class FCS: Cryptographic Support	
FCS_CKM.1/TLS	Cryptographic key generation for TLS
FCS_COP.1/TLS	Cryptographic operation for TLS
FCS_CKM.1/CMS	Cryptographic key generation for CMS
FCS_COP.1/CMS	Cryptographic operation for CMS
FCS_CKM.1/MTR	Cryptographic key generation for Meter communication encryption
FCS_COP.1/MTR	Cryptographic operation for Meter communication encryption
FCS_CKM.4	Cryptographic key destruction
FCS_COP.1/HASH	Cryptographic operation for Signatures
FCS_COP.1/MEM	Cryptographic operation for TSF and user data encryption

Class FDP: User Data Protection	
FDP_ACC.2	Complete Access Control
FDP_ACF.1	Security attribute based access control
FDP_IFC.2/FW	Complete information flow control for firewall
FDP_IFF.1/FW	Simple security attributes for Firewall
FDP_IFC.2/MTR	Complete information flow control for Meter information flow
FDP_IFF.1/MTR	Simple security attributes for Meter information
FDP_RIP.2	Full residual information protection
FDP_SDI.2	Stored data integrity monitoring and action
Class FIA: Identification and Authentication	
FIA_ATD.1	User attribute definition
FIA_AFL.1	Authentication failure handling
FIA_UAU.2	User authentication before any action
FIA_UAU.5	Multiple authentication mechanisms
FIA_UAU.6	Re-Authenticating
FIA_UID.2	User identification before any action
FIA_USB.1	User-subject binding
Class FMT: Security Management	
FMT_MOF.1	Management of security functions behaviour
FMT_SMF.1	Specification of Management Functions
FMT_SMR.1	Security roles

FMT_MSA.1/AC	Management of security attributes for Gateway access policy
FMT_MSA.3/AC	Static attribute initialisation for Gateway access policy
FMT_MSA.1/FW	Management of security attributes for Firewall policy
FMT_MSA.3/FW	Static attribute initialisation for Firewall policy
FMT_MSA.1/MTR	Management of security attributes for Meter policy
FMT_MSA.3/MTR	Static attribute initialisation for Meter policy
Class FPR: Privacy	
FPR_CON.1	Communication Concealing
FPR_PSE.1	Pseudonymity
Class FPT: Protection of the TSF	
FPT_FLS.1	Failure with preservation of secure state
FPT_RPL.1	Replay Detection
FPT_STM.1	Reliable time stamps
FPT_TST.1	TSF testing
FPT_PHP.1	Passive detection of physical attack
Class FTP: Trusted path/channels	
FTP_ITC.1/WAN	Inter-TSF trusted channel for WAN
FTP_ITC.1/MTR	Inter-TSF trusted channel for Meter
FTP_ITC.1/USR	Inter-TSF trusted channel for User

Table 9: List of Security Functional Requirements

1365 **6.2 Class FAU: Security Audit**

1366 **6.2.1 Introduction**

1367 The TOE compliant to this Security Target shall implement three different audit logs as
 1368 defined in **OSP.Log** and **O.Log**. The following table provides an overview over the three
 1369 audit logs before the following chapters introduce the SFRs related to those audit logs.

	System-Log	Consumer-Log	Calibration-Log
Purpose	<ul style="list-style-type: none"> • Inform the Gateway Administrator about security relevant events • Log all events as defined by Common Criteria [CC] for the used SFR • Log all system relevant events on specific functionality • Automated alarms in case of a cumulation of certain events • Inform the Service Technician about the status of the Gateway 	<ul style="list-style-type: none"> • Inform the Consumer about all information flows to the WAN • Inform the Consumer about the Processing Profiles • Inform the Consumer about other metering data (not billing-relevant) • Inform the Consumer about all billing-relevant data needed to verify an invoice 	<ul style="list-style-type: none"> • Track changes that are relevant for the calibration of the TOE relevant data needed to verify an invoice
Data	<ul style="list-style-type: none"> • As defined by CC part 2 • Augmented by specific events for the security functions 	<ul style="list-style-type: none"> • Information about all information flows to the WAN • Information about the current and the previous Processing Profiles • Non-billing-relevant Meter Data • Information about the system status (including relevant errors) 	<ul style="list-style-type: none"> • Calibration relevant data only

		<ul style="list-style-type: none"> Billing-relevant data needed to verify an invoice 	
Access	<ul style="list-style-type: none"> Access by authorised Gateway Administrator and via IF_GW_WAN only Events may only be deleted by an authorised Gateway Administrator via IF_GW_WAN Read access by authorised Service Technician via IF_GW_SRV only 	<ul style="list-style-type: none"> Read access by authorised Consumer and via IF_GW_CON only to the data related to the current consumer 	<ul style="list-style-type: none"> Read access by authorised Gateway Administrator and via IF_GW_WAN only
Deletion	<ul style="list-style-type: none"> Ring buffer. The availability of data has to be ensured for a sufficient amount of time Overwriting old events is possible if the memory is full. 	<ul style="list-style-type: none"> Ring buffer. The availability of data has to be ensured for a sufficient amount of time. Overwriting old events is possible if the memory is full Retention period is set by authorised Gateway Administrator on request by consumer, data older than this are deleted. 	<ul style="list-style-type: none"> The availability of data has to be ensured over the lifetime of the TOE.

1370

Table 10: Overview over audit processes

1371	6.2.2 Security Requirements for the System Log	
1372	6.2.2.1 Security audit automatic response (FAU_ARP)	
1373	6.2.2.1.1 FAU_ARP.1/SYS: Security Alarms for system log	
1374	FAU_ARP.1.1/SYS	The TSF shall take <i>inform an authorised Gateway Administrator and create a log entry in the system log</i> ³³
1375		upon detection of a potential security violation.
1376		
1377	Hierarchical to:	No other components
1378	Dependencies:	FAU_SAA.1 Potential violation analysis
1379		
1380	6.2.2.2 Security audit data generation (FAU_GEN)	
1381	6.2.2.2.1 FAU_GEN.1/SYS: Audit data generation for system log	
1382	FAU_GEN.1.1/SYS	The TSF shall be able to generate an audit record of the
1383		following auditable events:
1384		a) Start-up and shutdown of the audit functions;
1385		b) All auditable events for the <u>basic</u> ³⁴ level of audit; and
1386		c) <i>other non privacy relevant auditable events: none</i> ³⁵ .
1387	FAU_GEN.1.2/SYS	The TSF shall record within each audit record at least the
1388		following information:
1389		a) Date and time of the event, type of event, subject identity
1390		(if applicable), and the outcome (success or failure) of the
1391		event; and
1392		b) For each audit event type, based on the auditable event
1393		definitions of the functional components included in the
1394		PP/ST ³⁶ , <i>other audit relevant information: none</i> ³⁷ .

33 [assignment: *list of actions*]

34 [selection, choose one of: *minimum, basic, detailed, not specified*]

35 [assignment: *other specifically defined auditable events*]

36 [refinement: *PP/ST*]

37 [assignment: *other audit relevant information*]

1395	Hierarchical to:	No other components
1396	Dependencies:	FPT_STM.1
1397	6.2.2.3 Security audit analysis (FAU_SAA)	
1398	6.2.2.3.1 FAU_SAA.1/SYS: Potential violation analysis for system	
1399	log	
1400	FAU_SAA.1.1./SYS	The TSF shall be able to apply a set of rules in monitoring
1401		the audited events and based upon these rules indicate a
1402		potential violation of the enforcement of the SFRs.
1403	FAU_SAA.1.2/SYS	The TSF shall enforce the following rules for monitoring
1404		audited events:
1405		a) Accumulation or combination of
1406		<ul style="list-style-type: none"> • <i>Start-up and shutdown of the audit functions</i>
1407		<ul style="list-style-type: none"> • <i>all auditable events for the basic level of audit</i>
1408		<ul style="list-style-type: none"> • <i>all types of failures in the TSF as listed in</i>
1409		<i>FPT_FLS.1</i> ³⁸
1410		known to indicate a potential security violation.
1411		b) <i>any other rules: none</i> ³⁹ .

1487	6.2.4.1.1 FAU_GEN.1/CAL: Audit data generation for calibration log	
1488	FAU_GEN.1.1/CAL	The TSF shall be able to generate an audit record of the
1489		following auditable events:
1490		a) Start-up and shutdown of the audit functions;
1491		b) All auditable events for the <u>not specified</u> ⁵⁴ level of audit;
1492		and
1493		c) <i>all calibration-relevant information according to Table</i>
1494		<i>12</i> ⁵⁵ .
1495	FAU_GEN.1.2/CAL	The TSF shall record within each audit record at least the
1496		following information:
1497		a) Date and time of the event, type of event, subject identity
1498		(if applicable), and the outcome (success or failure) of the
1499		event; and
1500		b) For each audit event type, based on the auditable event
1501		definitions of the functional components included in the
1502		PP/ST ⁵⁶ , <i>other audit relevant information: none</i> ⁵⁷ .
1503	Hierarchical to:	No other components
1504	Dependencies:	FPT_STM.1
1505	Application Note 7:	The calibration log serves to fulfil national requirements in
1506		the context of the calibration of the TOE.
1507		

54 [selection, choose one of: *minimum, basic, detailed, not specified*]

55 [assignment: *other specifically defined auditable events*]

56 [refinement: *PP/ST*]

57 [assignment: *other audit relevant information*]

Event / Parameter	Content
Commissioning	Commissioning of the SMGW MUST be logged in calibration log.
Event of self-test	Initiation of self-test MUST be logged in calibration log.
New meter	Connection and registration of a new meter MUST be logged in calibration log.
Meter removal	Removal of a meter from SMGW MUST be logged in calibration log.
Change of tarification profiles	<p>Every change (incl. parameter change) of a tarification profile according to [TR-03109-1, 4.4], provided the parameter is relevant for calibration regulations (see below) as well as new storage or removal of tarification profiles MUST be logged in calibration log.</p> <p>Parameter relevant for calibration regulations are:</p> <ul style="list-style-type: none"> • Device-ID of a meter - Unique identifier of the meter, which send the input values for a TAF • OBIS value of the measured variable of the meter - Unique value for the measured variable of the meter for the used TAF • Metering point name - Unique name of the metering point • Billing period - Period in which a billing should be done • Consumer ID • Validity period - Period for which the TAF is booked • Definition of tariff stages - Defines different tariff stages and associated OBIS values. Here it will be defined which tariff stage is valid at the time of rule set activation • Tariff switching time - Defines to the split second the switching of tariff stages. The time points can be defined as periodic values • Register period - Time distance of two consecutive measured value acquisitions for meter readings

Change of meter profiles	<p>Every change (incl. parameter change) of a meter profile according to [TR-03109-1, 4.4], provided the parameter is relevant for calibration regulations (see below) as well as new storage or removal of meter profiles MUST be logged in calibration log.</p> <p>Parameter relevant for legal metrology are:</p> <ul style="list-style-type: none"> • Device-ID - Unique identifier of the meter according to DIN 43863-5 • Key material - Public key for inner signature (dependent on the used meter in LMN) • Register period - Interval during receipt of meter values • Displaying interval ('Anzeigeintervall') - Interval during which the actual meter value (only during display) must be updated in case of bidirectional communication between meter and SMGW • Balancing ('Saldierend') - Determines if the meter is balancing ('saldierend') and meter values can grow and fall • OBIS values - OBIS values according to IEC-62056-6-1 resp. EN 13757-1 • Converter factor ('Wandlerfaktor') - Value is 1 in case of directly connected meter. In usage of converter counter ('Wandlerzähler') the value may be different.
Software update	Every update of the code which touches calibration regulations (serialized COSEM-objects, rules) MUST be logged in calibration log.
Firmware update	Every firmware update (incl. operating system update if applicable) MUST be logged in calibration log.
Error messages of a meter	<p>All FATAL messages of a connected meter MUST be logged in calibration log according to</p> <p>0 - no error</p> <p>1 - Warning, no action to be done according to calibration authority, meter value valid</p>

	<p>2 - Temporal error, send meter value will be marked as invalid, the value in meter field ('Messwertfeld') could be used according to the rules of [VDE4400] resp. [G865] as replacement value ('Ersatzwert') in backend.</p> <p>3 - Temporal error, send meter value is invalid; the value in the meter field ('Messwertfeld') cannot be used as replacement value in backend.</p> <p>4 - Fatal error (meter defect), actual send value is invalid and all future values will be invalid.</p> <p>including the device-ID.</p>
<p>Error messages of a SMGW</p>	<p>All self-test and calibration regulations relevant errors MUST be logged in calibration log.</p>

1508

1556	6.3 Class FCO: Communication	
1557	6.3.1 Non-repudiation of origin (FCO_NRO)	
1558	6.3.1.1 FCO_NRO.2: Enforced proof of origin	
1559	FCO_NRO.2.1	The TSF shall enforce the generation of evidence of origin
1560		for transmitted <i>Meter Data</i> ⁶⁹ at all times.
1561	FCO_NRO.2.2	The TSF shall be able to relate the <i>key material used for</i>
1562		<i>signature</i> ^{70, 71} of the originator of the information, and the
1563		<i>signature</i> ⁷² of the information to which the evidence
1564		applies.
1565	FCO_NRO.2.3	The TSF shall provide a capability to verify the evidence of
1566		origin of information to <u><i>recipient, Consumer</i></u> ⁷³ given
1567		<i>limitations of the digital signature according to TR-03109-</i>
1568		<i>1</i> ⁷⁴ .
1569	Hierarchical to:	FCO_NRO.1 Selective proof of origin
1570	Dependencies:	FIA_UID.1 Timing of identification
1571	Application Note 11:	FCO_NRO.2 requires that the TOE calculates a signature
1572		over Meter Data that is submitted to external entities.
1573		Therefore, the TOE has to create a hash value over the
1574		Data To Be Signed (DTBS) as defined in
1575		FCS_COP.1/HASH. The creation of the actual signature
1576		however is performed by the Security Module.

69 [assignment: *list of information types*]

70 [assignment: *list of attributes*]

71 The key material here also represents the identity of the Gateway.

72 [assignment: *list of information fields*]

73 [selection: *originator, recipient, [assignment: list of third parties]*]

74 [assignment: *limitations on the evidence of origin*]

1577 6.4 Class FCS: Cryptographic Support

1578 6.4.1 Cryptographic support for TLS

1579 6.4.1.1 Cryptographic key management (FCS_CKM)

1580 **6.4.1.1.1 FCS_CKM.1/TLS: Cryptographic key generation for TLS**

1581 FCS_CKM.1.1/TLS The TSF shall generate cryptographic keys in accordance
 1582 with a specified cryptographic key generation algorithm
 1583 *TLS-PRF with SHA-256 or SHA-384*⁷⁵ and specified
 1584 cryptographic key sizes *128 bit, 256 bit or 384 bit*⁷⁶ that
 1585 meet the following: *[RFC 5246] in combination with*
 1586 *[FIPS Pub. 180-4] and [RFC 2104]*⁷⁷.

1587 Hierarchical to: No other components.

1588 Dependencies: [FCS_CKM.2 Cryptographic key distribution, or
 1589 FCS_COP.1 Cryptographic operation], fulfilled by
 1590 FCS_COP.1/TLS

1591 FCS_CKM.4 Cryptographic key destruction

1592 **Application Note 12:** The Security Module is used for the generation of random
 1593 numbers and for all cryptographic operations with the pri-
 1594 vate key of a TLS certificate.

1595 **Application Note 13:** The TOE uses only cryptographic specifications and
 1596 algorithms as described in [TR-03109-3].

1597 6.4.1.2 Cryptographic operation (FCS_COP)

1598 **6.4.1.2.1 FCS_COP.1/TLS: Cryptographic operation for TLS**

1599 FCS_COP.1.1/TLS The TSF shall perform *TLS encryption, decryption, and*
 1600 *integrity protection*⁷⁸ in accordance with a specified
 1601 cryptographic algorithm *TLS cipher suites*

75 [assignment: *key generation algorithm*]

76 [assignment: *cryptographic key sizes*]

77 [assignment: *list of standards*]

78 [assignment: *list of cryptographic operations*]

1602 *TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256,*
 1603 *TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384,*
 1604 *TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256,*
 1605 *and*
 1606 *TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384*
 1607 ⁷⁹ *using elliptic curves BrainpoolP256r1, BrainpoolP384r1,*
 1608 *BrainpoolP512r1 (according to [RFC 5639]), NIST P-256,*
 1609 *and NIST P-384 (according to [RFC 5114]) and*
 1610 *cryptographic key sizes 128 bit or 256 bit* ⁸⁰ *that meet the*
 1611 *following: [RFC 2104], [RFC 5114], [RFC 5246],*
 1612 *[RFC 5289], [RFC 5639], [NIST 800-38A], and [NIST 800-*
 1613 *38D]* ⁸¹.

1614 Hierarchical to: No other components.
 1615 Dependencies: [FDP_ITC.1 Import of user data without security attributes,
 1616 or
 1617 FDP_ITC.2 Import of user data with security attributes, or
 1618 FCS_CKM.1 Cryptographic key generation], fulfilled by
 1619 FCS_CKM.1/TLS
 1620 FCS_CKM.4 Cryptographic key destruction

1621 **Application Note 14:** The TOE uses only cryptographic specifications and
 1622 algorithms as described in [TR-03109-3].

1623 6.4.2 Cryptographic support for CMS

1624 6.4.2.1 Cryptographic key management (FCS_CKM)

1625 6.4.2.1.1 FCS_CKM.1/CMS: Cryptographic key generation for CMS

1626 FCS_CKM.1.1/CMS The TSF shall generate cryptographic keys in accordance
 1627 with a specified cryptographic key generation algorithm
 1628 *ECKA-EG* ⁸² and specified cryptographic key sizes 128

79 [assignment: *cryptographic algorithm*]

80 [assignment: *cryptographic key sizes*]

1678	communication encryption	
1679	FCS_COP.1.1/MTR	The TSF shall perform symmetric encryption, decryption,
1680		integrity protection ⁹¹ in accordance with a specified
1681		cryptographic algorithm AES-CBC-CMAC ⁹² and
1682		cryptographic key sizes 128 bit ⁹³ that meet the following:
1683		[FIPS Pub. 197] and [RFC 4493] in combination with
1684		[ISO 10116] ⁹⁴ .
1685	Hierarchical to:	No other components.
1686	Dependencies:	[FDP_ITC.1 Import of user data without security attributes,
1687		or
1688		FDP_ITC.2 Import of user data with security attributes, or
1689		FCS_CKM.1 Cryptographic key generation], fulfilled by
1690		FCS_CKM.1/MTR
1691		FCS_CKM.4 Cryptographic key destruction
1692	Application Note 19:	The ST allows different scenarios of key generation for
1693		Meter communication encryption. Those are:
1694		1. If a TLS encryption is being used, the key
1695		generation/negotiation is as defined by
1696		FCS_CKM.1/TLS.
1697		2. If AES encryption is being used, the key has been
1698		brought into the Gateway via a management
1699		function during the pairing process for the Meter

91 [assignment: *list of cryptographic operations*]

92 [assignment: *cryptographic algorithm*]

93 [assignment: *cryptographic key sizes*]

94 [assignment: *list of standards*]

1700 (see FMT_SMF.1) as defined by
1701 FCS_COP.1/MTR.

1702 **Application Note 20:** If the connection between the Meter and TOE is
1703 unidirectional, the communication between the Meter and
1704 the TOE is secured by the use of a symmetric AES
1705 encryption. If a bidirectional connection between the Meter
1706 and the TOE is established, the communication is secured
1707 by a TLS channel as described in chapter 6.4.1. As the
1708 TOE shall be interoperable with all kind of Meters, both
1709 kinds of encryption are implemented.

1710 **Application Note 21:** The TOE uses only cryptographic specifications and
1711 algorithms as described in [TR-03109-3].

1712 6.4.4 General Cryptographic support

1713 6.4.4.1 Cryptographic key management (FCS_CKM)

1714 6.4.4.1.1 FCS_CKM.4: Cryptographic key destruction

1715 FCS_CKM.4.1 The TSF shall destroy cryptographic keys in accordance
1716 with a specified cryptographic key destruction method
1717 *Zeroisation*⁹⁵ that meets the following: *none*⁹⁶.

1718 Hierarchical to: No other components.

1719 Dependencies: [FDP_ITC.1 Import of user data without security attributes,
1720 or

1721 FDP_ITC.2 Import of user data with security attributes, or

1722 FCS_CKM.1 Cryptographic key generation], fulfilled by
1723 FCS_CKM.1/TLS and

1724 FCS_CKM.1/CMS and FCS_CKM.1/MTR

1725 **Application Note 22:** Please note that as against the requirement FDP_RIP.2,
1726 the mechanisms implementing the requirement from
1727 FCS_CKM.4 shall be suitable to avoid attackers with

95 [assignment: *cryptographic key destruction method*]

96 [assignment: *list of standards*]

1728		physical access to the TOE from accessing the keys after
1729		they are no longer used.
1730		6.4.4.2 Cryptographic operation (FCS_COP)
1731		6.4.4.2.1 FCS_COP.1/HASH: Cryptographic operation, hashing for
1732		signatures
1733	FCS_COP.1.1/HASH	The TSF shall perform <i>hashing for signature creation and</i>
1734		<i>verification</i> ⁹⁷ in accordance with a specified cryptographic
1735		algorithm <i>SHA-256, SHA-384 and SHA-512</i> ^{98, 99} and
1736		cryptographic key sizes <i>none</i> ¹⁰⁰ that meet the following:
1737		<i>[FIPS Pub. 180-4]</i> ¹⁰¹ .
1738	Hierarchical to:	No other components.
1739	Dependencies:	[FDP_ITC.1 Import of user data without security attributes,
1740		or
1741		FDP_ITC.2 Import of user data with security attributes, or
1742		FCS_CKM.1 Cryptographic key generation ¹⁰²]
1743		FCS_CKM.4 Cryptographic key destruction
1744	Application Note 23:	The TOE is only responsible for hashing of data in the
1745		context of digital signatures. The actual signature
1746		operation and the handling (i.e. protection) of the
1747		cryptographic keys in this context is performed by the
1748		Security Module.
1749	Application Note 24:	The TOE uses only cryptographic specifications and
1750		algorithms as described in [TR-03109-3].

97 [assignment: *list of cryptographic operations*]

98 [assignment: *cryptographic algorithm*]

99 The cryptographic algorithm SHA-512 is included but not used in the TOE (it is reserved for future use)

100 [assignment: *cryptographic key sizes*]

101 [assignment: *list of standards*]

102 The justification for the missing dependency FCS_CKM.1 can be found in chapter 6.12.1.3.

1751 **6.4.4.2.2 FCS_COP.1/MEM: Cryptographic operation, encryption of**
 1752 **TSF and user data**

1753 FCS_COP.1.1/MEM The TSF shall perform *TSF and user data encryption and*
 1754 *decryption*¹⁰³ in accordance with a specified cryptographic
 1755 algorithm *AES-XTS*¹⁰⁴ and cryptographic key sizes *128*
 1756 *bit*¹⁰⁵ that meet the following: [*FIPS Pub. 197*] and
 1757 [*NIST 800-38E*]¹⁰⁶.

1758 Hierarchical to: No other components.

1759 Dependencies: [FDP_ITC.1 Import of user data without security attributes,
 1760 or

1761 FDP_ITC.2 Import of user data with security attributes, or

1762 FCS_CKM.1 Cryptographic key generation], not fulfilled s.
 1763 Application Note 25

1764 FCS_CKM.4 Cryptographic key destruction

1765 **Application Note 25:** Please note that for the key generation process an external
 1766 security module is used during TOE production.

1767 **Application Note 26:** The TOE encrypts its local TSF and user data while it is
 1768 not in use (i.e. while stored in a persistent memory).

1769 It shall be noted that this kind of encryption cannot provide
 1770 an absolute protection against physical manipulation and
 1771 does not aim to. It however contributes to the security
 1772 concept that considers the protection that is provided by
 1773 the environment.

105 [assignment: *cryptographic key sizes*]

106 [assignment: *list of standards*]

1774 6.5 Class FDP: User Data Protection

1775 6.5.1 Introduction to the Security Functional Policies

1776 The security functional requirements that are used in the following chapters implicitly
 1777 define a set of Security Functional Policies (SFP). These policies are introduced in the
 1778 following paragraphs in more detail to facilitate the understanding of the SFRs:

- 1779 • The **Gateway access SFP** is an access control policy to control the access to
 1780 objects under the control of the TOE. The details of this access control policy
 1781 highly depend on the concrete application of the TOE. The access control policy
 1782 is described in more detail in [TR-03109-1].
- 1783 • The **Firewall SFP** implements an information flow policy to fulfil the objective
 1784 O.Firewall. All requirements around the communication control that the TOE
 1785 poses on communications between the different networks are defined in this
 1786 policy.
- 1787 • The **Meter SFP** implements an information flow policy to fulfil the objective
 1788 O.Meter. It defines all requirements concerning how the TOE shall handle Meter
 1789 Data.

1790 6.5.2 Gateway Access SFP

1791 6.5.2.1 Access control policy (FDP_ACC)

1792 6.5.2.1.1 FDP_ACC.2: Complete access control

1793 FDP_ACC.2.1 The TSF shall enforce the *Gateway access SFP*¹⁰⁷ on
 1794 *subjects: external entities in WAN, HAN and LMN*
 1795 *objects: any information that is sent to, from or via*
 1796 *the TOE and any information that is stored in the*
 1797 *TOE*¹⁰⁸ and all operations among subjects and
 1798 objects covered by the SFP.

1799 FDP_ACC.2.2 The TSF shall ensure that all operations between any
 1800 subject controlled by the TSF and any object controlled by
 1801 the TSF are covered by an access control SFP.

107 [assignment: *access control SFP*]

108 [assignment: *list of subjects and objects*]

1802	Hierarchical to:	FDP_ACC.1 Subset access control
1803	Dependencies:	FDP_ACF.1 Security attribute based access control
1804	6.5.2.1.2 FDP_ACF.1: Security attribute based access control	
1805	FDP_ACF.1.1	The TSF shall enforce the <i>Gateway access SFP</i> ¹⁰⁹ to
1806		objects based on the following:
1807		<i>subjects: external entities on the WAN, HAN or</i>
1808		<i>LMN side</i>
1809		<i>objects: any information that is sent to, from or via</i>
1810		<i>the TOE</i>
1811		<i>attributes: destination interface</i> ¹¹⁰ .
1812	FDP_ACF.1.2	The TSF shall enforce the following rules to determine if
1813		an operation among controlled subjects and controlled
1814		objects is allowed:
1815		• <i>an authorised Consumer is only allowed to have</i>
1816		<i>read access to his own User Data via the interface</i>
1817		<i>IF_GW_CON,</i>
1818		• <i>an authorised Service Technician is only allowed to</i>
1819		<i>have read access to the system log via the interface</i>
1820		<i>IF_GW_SRV, the Service Technician must not be</i>
1821		<i>allowed to read, modify or delete any other TSF</i>
1822		<i>data,</i>
1823		• <i>an authorised Gateway Administrator is allowed to</i>
1824		<i>interact with the TOE only via IF_GW_WAN,</i>
1825		• <i>only authorised Gateway Administrators are</i>
1826		<i>allowed to establish a wake-up call,</i>
1827		• <i>additional rules governing access among controlled</i>
1828		<i>subjects and controlled objects using controlled</i>

¹⁰⁹ [assignment: *access control SFP*]

¹¹⁰ [assignment: *list of subjects and objects controlled under the indicated SFP, and for each, the SFP-relevant security attributes, or named groups of SFP-relevant security attributes*]

1829		<i>operations on controlled objects or none:</i>
1830		<i>none</i> ^{111, 112}
1831	FDP_ACF.1.3	The TSF shall explicitly authorise access of subjects to
1832		objects based on the following additional rules: <i>none</i> ¹¹³ .
1833	FDP_ACF.1.4	The TSF shall explicitly deny access of subjects to objects
1834		based on the following additional rules:
1835		<ul style="list-style-type: none"> • <i>the Gateway Administrator is not allowed to read</i>
1836		<i>consumption data or the Consumer Log,</i>
1837		<ul style="list-style-type: none"> • <i>nobody must be allowed to read the symmetric</i>
1838		<i>keys used for encryption</i> ¹¹⁴ .
1839	Hierarchical to:	No other components
1840	Dependencies:	FDP_ACC.1 Subset access control
1841		FMT_MSA.3 Static attribute initialisation
1842	6.5.3 Firewall SFP	
1843	6.5.3.1 Information flow control policy (FDP_IFC)	
1844	6.5.3.1.1 FDP_IFC.2/FW: Complete information flow control for	
1845	firewall	
1846	FDP_IFC.2.1/FW	The TSF shall enforce the <i>Firewall SFP</i> ¹¹⁵ on the <i>TOE,</i>
1847		<i>external entities on the WAN side, external entities on the</i>
1848		<i>LAN side and all information flowing between them</i> ¹¹⁶ and
1849		all operations that cause that information to flow to and
1850		from subjects covered by the SFP.

¹¹¹ [assignment: *additional rules governing access among controlled subjects and controlled objects using controlled operations on controlled objects or none*]

¹¹² [assignment: *rules governing access among controlled subjects and controlled objects using controlled operations on controlled objects*]

¹¹³ [assignment: *rules, based on security attributes, that explicitly authorise access of subjects to objects*]

¹¹⁴ [assignment: *rules, based on security attributes, that explicitly deny access of subjects to objects*]

¹¹⁵ [assignment: *information flow control SFP*]

¹¹⁶ [assignment: *list of subjects and information*]

1851	FDP_IFC.2.2/FW	The TSF shall ensure that all operations that cause any
1852		information in the TOE to flow to and from any subject in
1853		the TOE are covered by an information flow control SFP.
1854	Hierarchical to:	FDP_IFC.1 Subset information flow control
1855	Dependencies:	FDP_IFF.1 Simple security attributes
1856	6.5.3.2 Information flow control functions (FDP_IFF)	
1857	6.5.3.2.1 FDP_IFF.1/FW: Simple security attributes for Firewall	
1858	FDP_IFF.1.1/FW	The TSF shall enforce the <i>Firewall SFP</i> ¹¹⁷ based on the
1859		following types of subject and information security
1860		attributes:
1861		<i>subjects: The TOE and external entities on the</i>
1862		<i>WAN, HAN or LMN side</i>
1863		<i>information: any information that is sent to, from or</i>
1864		<i>via the TOE</i>
1865		<i>attributes: destination_interface (TOE, LMN, HAN</i>
1866		<i>or WAN), source_interface (TOE, LMN, HAN or</i>
1867		<i>WAN), destination_authenticated,</i>
1868		<i>source_authenticated</i> ¹¹⁸ .
1869	FDP_IFF.1.2/FW	The TSF shall permit an information flow between a
1870		controlled subject and controlled information via a
1871		controlled operation if the following rules hold:
1872		<i>(if source_interface=HAN or</i>
1873		<i>source_interface=TOE) and</i>
1874		<i>destination_interface=WAN and</i>
1875		<i>destination_authenticated = true</i>
1876		<i>Connection establishment is allowed</i>
1877		

117 [assignment: *information flow control SFP*]

118 [assignment: *list of subjects and information controlled under the indicated SFP, and for each, the security attributes*]

1878 *if source_interface=LMN and*
1879 *destination_interface= TOE and*
1880 *source_authenticated = true*
1881 *Connection establishment is allowed*
1882
1883 *if source_interface=TOE and*
1884 *destination_interface= LMN and*
1885 *destination_authenticated = true*
1886 *Connection establishment is allowed*
1887
1888 *if source_interface=HAN and*
1889 *destination_interface= TOE and*
1890 *source_authenticated = true*
1891 *Connection establishment is allowed*
1892
1893 *if source_interface=TOE and*
1894 *destination_interface= HAN and*
1895 *destination_authenticated = true*
1896 *Connection establishment is allowed*
1897 *else*
1898 *Connection establishment is denied*¹¹⁹.
1899 FDP_IFF.1.3/FW The TSF shall enforce the *establishment of a connection*
1900 *to a configured external entity in the WAN after having*
1901 *received a wake-up message on the WAN interface*¹²⁰.

119 [assignment: *for each operation, the security attribute-based relationship that must hold between subject and information security attributes*]

120 [assignment: *additional information flow control SFP rules*]

1902	FDP_IFF.1.4/FW	The TSF shall explicitly authorise an information flow
1903		based on the following rules: <i>none</i> ¹²¹ .
1904	FDP_IFF.1.5/FW	The TSF shall explicitly deny an information flow based on
1905		the following rules: <i>none</i> ¹²² .
1906	Hierarchical to:	No other components
1907	Dependencies:	FDP_IFC.1 Subset information flow control
1908		FMT_MSA.3 Static attribute initialisation
1909	Application Note 27:	It should be noted that the FDP_IFF.1.1/FW facilitates
1910		different interfaces of the origin and the destination of an
1911		information flow implicitly requires the TOE to implement
1912		physically separate ports for WAN, LMN and HAN.
1913	6.5.4 Meter SFP	
1914	6.5.4.1 Information flow control policy (FDP_IFC)	
1915	6.5.4.1.1 FDP_IFC.2/MTR: Complete information flow control for	
1916	Meter information flow	
1917	FDP_IFC.2.1/MTR	The TSF shall enforce the <i>Meter SFP</i> ¹²³ on <i>the TOE,</i>
1918		<i>attached Meters, authorized External Entities in the WAN</i>
1919		<i>and all information flowing between them</i> ¹²⁴ and all
1920		operations that cause that information to flow to and from
1921		subjects covered by the SFP.
1922	FDP_IFC.2.2/MTR	The TSF shall ensure that all operations that cause any
1923		information in the TOE to flow to and from any subject in
1924		the TOE are covered by an information flow control SFP.
1925	Hierarchical to:	FDP_IFC.1 Subset information flow control

¹²⁴ [assignment: *list of subjects and information*]

1927	6.5.4.2 Information flow control functions (FDP_IFF)	
1928	6.5.4.2.1 FDP_IFF.1/MTR: Simple security attributes for Meter	
1929	information	
1930	FDP_IFF.1.1/MTR	The TSF shall enforce the <i>Meter SFP</i> ¹²⁵ based on the
1931		following types of subject and information security
1932		attributes:
1933		<ul style="list-style-type: none"> • <i>subjects: TOE, external entities in WAN, Meters located in LMN</i>
1934		
1935		<ul style="list-style-type: none"> • <i>information: any information that is sent via the TOE</i>
1936		
1937		<ul style="list-style-type: none"> • <i>attributes: destination interface, source interface (LMN or WAN), Processing Profile</i>¹²⁶.
1938		
1939	FDP_IFF.1.2/MTR	The TSF shall permit an information flow between a
1940		controlled subject and controlled information via a
1941		controlled operation if the following rules hold:
1942		<ul style="list-style-type: none"> • <i>an information flow shall only be initiated if allowed by a corresponding Processing Profile</i>¹²⁷.
1943		
1944	FDP_IFF.1.3/MTR	The TSF shall enforce the following rules:
1945		<ul style="list-style-type: none"> • Data received from Meters shall be processed as defined in the corresponding Processing Profiles,
1946		
1947		<ul style="list-style-type: none"> • Results of processing of Meter Data shall be submitted to external entities as defined in the Processing Profiles,
1948		
1949		
1950		<ul style="list-style-type: none"> • The internal system time shall be synchronised as follows:
1951		

¹²⁵ [assignment: *information flow control SFP*]

¹²⁶ [assignment: *list of subjects and information controlled under the indicated SFP, and for each, the security attributes*]

¹²⁷ [assignment: *for each operation, the security attribute-based relationship that must hold between subject and information security attributes*]

1952			○ <i>The TOE shall compare the system time to a</i>
1953			<i>reliable external time source every 24</i>
1954			<i>hours</i> ¹²⁸ .
1955			○ <i>If the deviation between the local time and the</i>
1956			<i>remote time is acceptable</i> ¹²⁹ , <i>the local system</i>
1957			<i>time shall be updated according to the remote</i>
1958			<i>time.</i>
1959			○ <i>If the deviation is not acceptable the TOE</i>
1960			<i>shall ensure that any following Meter Data is</i>
1961			<i>not used, stop operation</i> ¹³⁰ <i>and</i>
1962			<i>inform a Gateway Administrator</i> ¹³¹ .
1963	FDP_IFF.1.4/MTR		The TSF shall explicitly authorise an information flow
1964			based on the following rules: <i>none</i> ¹³² .
1965	FDP_IFF.1.5/MTR		The TSF shall explicitly deny an information flow based on
1966			the following rules: <i>The TOE shall deny any acceptance of</i>
1967			<i>information by external entities in the LMN unless the</i>
1968			<i>authenticity, integrity and confidentiality of the Meter Data</i>
1969			<i>could be verified</i> ¹³³ .
1970	Hierarchical to:		No other components
1971	Dependencies:		FDP_IFC.1 Subset information flow control
1972			FMT_MSA.3 Static attribute initialisation
1973	Application Note 28:		FDP_IFF.1.3 defines that the TOE shall update the local
1974			system time regularly with reliable external time sources if
1975			the deviation is acceptable. In the context of this
1976			functionality two aspects should be mentioned:

128 [assignment: *synchronization interval between 1 minute and 24 hours*]

129 Please refer to the following application note for a detailed definition of “acceptable”.

130 Please note that this refers to the complete functional operation of the TOE and not only to the update of local time. However, an administrative access shall still be possible.

131 [assignment: *additional information flow control SFP rules*]

132 [assignment: *rules, based on security attributes, that explicitly authorise information flows*]

133 [assignment: *rules, based on security attributes, that explicitly deny information flows*]

1977		Reliability of external source
1978		<p>There are several ways to achieve the reliability of the external source. On the one hand, there may be a source in the WAN that has an acceptable reliability on its own (e.g. because it is operated by a very trustworthy organisation (an official legal time issued by the calibration authority would be a good example for such a source¹³⁴)).</p> <p>On the other hand a developer may choose to maintain multiple external sources that all have a certain level of reliability but no absolute reliability. When using such sources the TOE shall contact more than one source and harmonize the results in order to ensure that no attack happened.</p>

¹³⁴ By the time that this ST is developed however, this time source is not yet available.

2007 received from the Meter. The TOE has two options to do
 2008 so:

- 2009 1. To implement a channel between the Meter and the
 2010 TOE using the functionality as described in
 2011 FCS_COP.1/TLS.
- 2012 2. To accept, decrypt and verify data that has been
 2013 encrypted by the Meter as required in
 2014 FCS_COP.1/MTR if a wireless connection to the
 2015 meters is established.

2016 The latter possibility can be used only if a wireless
 2017 connection between the Meter and the TOE is established.

2018 **6.5.5 General Requirements on user data protection**

2019 6.5.5.1 Residual information protection (FDP_RIP)

2020 **6.5.5.1.1 FDP_RIP.2: Full residual information protection**

2021 FDP_RIP.2.1 The TSF shall ensure that any previous information
 2022 content of a resource is made unavailable upon the
 2023 deallocation of the resource from ¹³⁵ all objects.

2024 Hierarchical to: FDP_RIP.1 Subset residual information protection

2025 Dependencies: No dependencies.

2026 **Application Note 30:** Please refer to chapter F.9 of part 2 of [CC] for more
 2027 detailed information about what kind of information this
 2028 requirement applies to.

2029 Please further note that this SFR has been used in order
 2030 to ensure that information that is no longer used is made
 2031 unavailable from a logical perspective. Specifically, it has
 2032 to be ensured that this information is no longer available
 2033 via an external interface (even if an access control or
 2034 information flow policy would fail). However, this does not
 2035 necessarily mean that the information is overwritten in a

135 [selection: *allocation of the resource to, deallocation of the resource from*]

2036 way that makes it impossible for an attacker to get access
 2037 to is assuming a physical access to the memory of the
 2038 TOE.

2039 6.5.5.2 Stored data integrity (FDP_SDI)

2040 **6.5.5.2.1 FDP_SDI.2: Stored data integrity monitoring and action**

2041 FDP_SDI.2.1 The TSF shall monitor user data stored in containers
 2042 controlled by the TSF for *integrity errors*¹³⁶ on all objects,
 2043 based on the following attributes: *cryptographical check*
 2044 *sum*¹³⁷.

2045 FDP_SDI.2.2 Upon detection of a data integrity error, the TSF shall
 2046 *create a system log entry*¹³⁸.

2047 Hierarchical to: FDP_SDI.1 Stored data integrity monitoring

2048 Dependencies: No dependencies.

2049 **6.6 Class FIA: Identification and Authentication**

2050 **6.6.1 User Attribute Definition (FIA_ATD)**

2051 6.6.1.1 FIA_ATD.1: User attribute definition

2052 FIA_ATD.1.1 The TSF shall maintain the following list of security
 2053 attributes belonging to individual users:

- 2054 • *User Identity*
- 2055 • *Status of Identity (Authenticated or not)*
- 2056 • *Connecting network (WAN, HAN or LMN)*
- 2057 • *Role membership*
- 2058 • *none*¹³⁹.

2059 Hierarchical to: No other components.

2060 Dependencies: No dependencies.

 - *TLS-authentication via HAN-certificates at the IF_GW_SRV interface*
 - *authentication at the IF_GW_CLS interface*
 - *verification via a commands' signature*¹⁴⁴
- to support user authentication.
- FIA_UAU.5.2
- The TSF shall authenticate any user's claimed identity according to the
- *meters shall be authenticated via certificates at the IF_GW_MTR interface only*
 - *Gateway Administrators shall be authenticated via TLS-certificates at the IF_GW_WAN interface only*
 - *Consumers shall be authenticated via TLS-certificates or via password at the IF_GW_CON interface only*
 - *Service Technicians shall be authenticated via TLS-certificates at the IF_GW_SRV interface only*
 - *CLS shall be authenticated at the IF_GW_CLS only*
 - *each command of an Gateway Administrator shall be authenticated by verification of the commands' signature,*
 - *other external entities shall be authenticated via TLS-certificates at the IF_GW_WAN interface only*¹⁴⁵.

144 [assignment: *list of multiple authentication mechanisms*]

145 [assignment: *rules describing how the multiple authentication mechanisms provide authentication*]

2113	Hierarchical to:	No other components.
2114	Dependencies:	No dependencies.
2115	Application Note 32:	Please refer to [TR-03109-1] for a more detailed overview
2116		on the authentication of TOE users.
2117	6.6.3.3 FIA_UAU.6: Re-authenticating	
2118	FIA_UAU.6.1	The TSF shall re-authenticate an external entity ¹⁴⁶ under
2119		the conditions
2120		<ul style="list-style-type: none"> • <i>TLS channel to the WAN shall be disconnected</i>
2121		<i>after 48 hours,</i>
2122		<ul style="list-style-type: none"> • <i>TLS channel to the LMN shall be disconnected after</i>
2123		<i>5 MB of transmitted information,</i>
2124		<ul style="list-style-type: none"> • <i>other local users shall be re-authenticated after at</i>
2125		<i>least 10 minutes</i> ¹⁴⁷ <i>of inactivity</i> ¹⁴⁸ .
2126	Hierarchical to:	No other components.
2127	Dependencies:	No dependencies.
2128	Application Note 33:	This requirement on re-authentication for external entities
2129		in the WAN and LMN is addressed by disconnecting the
2130		TLS channel even though a re-authentication is - strictly
2131		speaking - only achieved if the TLS channel is build up
2132		again.
2133	6.6.4 User identification (FIA_UID)	
2134	6.6.4.1 FIA_UID.2: User identification before any action	
2135	FIA_UID.2.1	The TSF shall require each user to be successfully
2136		identified before allowing any other TSF-mediated actions
2137		on behalf of that user.
2138	Hierarchical to:	FIA_UID.1
2139	Dependencies:	No dependencies.

¹⁴⁶ [refinement: *the user*]

¹⁴⁷ [refinement: *after at least 10 minutes*]. This value is configurable by the authorised Gateway Administrator.

¹⁴⁸ [assignment: *list of conditions under which re-authentication is required*]

2140	6.6.5 User-subject binding (FIA_USB)	
2141	6.6.5.1 FIA_USB.1: User-subject binding	
2142	FIA_USB.1.1	The TSF shall associate the following user security
2143		attributes with subjects acting on the behalf of that user:
2144		<i>attributes as defined in FIA_ATD.1 ¹⁴⁹.</i>
2145	FIA_USB.1.2	The TSF shall enforce the following rules on the initial
2146		association of user security attributes with subjects acting
2147		on the behalf of users:
2148		<ul style="list-style-type: none">• <i>The initial value of the security attribute ‘connecting</i>
2149		<i>network’ is set to the corresponding physical</i>
2150		<i>interface of the TOE (HAN, WAN, or LMN).</i>
2151		<ul style="list-style-type: none">• <i>The initial value of the security attribute ‘role</i>
2152		<i>membership’ is set to the user role claimed on basis</i>
2153		<i>of the credentials used for authentication at the</i>
2154		<i>connecting network as defined in FIA_UAU.5.2. For</i>
2155		<i>role membership ‘Gateway Administrators’,</i>
2156		<i>additionally the remote network endpoint ¹⁵⁰used</i>
2157		<i>and configured in the TSF data must be identical.</i>
2158		<ul style="list-style-type: none">• <i>The initial value of the security attribute ‘user</i>
2159		<i>identity’ is set to the identification attribute of the</i>
2160		<i>credentials used by the subject. The security</i>
2161		<i>attribute ‘user identity’ is set to the subject key ID of</i>
2162		<i>the certificate in case of a certificate-based</i>
2163		<i>authentication, the meter-ID for wired Meters and</i>
2164		<i>the user name owner in case of a password-based</i>
2165		<i>authentication at interface IF_GW_CON.</i>
2166		<ul style="list-style-type: none">• <i>The initial value of the security attribute ‘status of</i>
2167		<i>identity’ is set to the authentication status of the</i>
2168		<i>claimed identity. If the authentication is successful</i>
2169		<i>on basis of the used credentials, the status of</i>

149 [assignment: *list of user security attributes*]

150 The remote network endpoint can be either the remote IP address or the remote host name.

2170 *identity is 'authenticated', otherwise it is*
 2171 *'not authenticated'* ¹⁵¹.

2172 FIA_USB.1.3 The TSF shall enforce the following rules governing
 2173 changes to the user security attributes associated with
 2174 subjects acting on the behalf of users:

- 2175 • *security attribute 'connecting network' is not*
 2176 *changeable.*
- 2177 • *security attribute 'role membership' is not*
 2178 *changeable.*
- 2179 • *security attribute 'user identity' is not changeable.*
- 2180 • *security attribute 'status of identity' is not*
 2181 *changeable*¹⁵².

- 2192 13¹⁵⁵.
- 2193 Hierarchical to: No other components.
- 2194 Dependencies: FMT_SMR.1 Security roles
- 2195 FMT_SMF.1 Specification of Management Functions

Function	Limitation
Display the version number of the TOE Display the current time	The management functions must only be accessible for an authorised Consumer and only via the interface IF_GW_CON. An authorized Service Technician is also able to access the version number of the TOE and the current time of the TOE via interface IF_GW_SRV ¹⁵⁶ .
All other management functions as defined in FMT_SMF.1	The management functions must only be accessible for an authorised Gateway Administrator and only via the interface IF_GW_WAN ¹⁵⁷ .
Firmware Update	The firmware update must only be possible after the authenticity of the firmware update has been verified (using the services of the Security Module and the trust anchor of the Gateway developer) and if the version number of the new firmware is higher to the version of the installed firmware.
Deletion or modification of events from the Calibration Log	A deletion or modification of events from the calibration log must not be possible.

2196 **Table 13: Restrictions on Management Functions**

154 [assignment: *list of functions*]

155 [assignment: *the authorised identified roles*]

156 The TOE displays the version number of the TOE and the current time of the TOE also to the authorized service technician via the interface IF_GW_SRV because the service technician must be able to determine if the current time of the TOE is correct or if the version number of the TOE is correct.

157 This criterion applies to all management functions. The following entries in this table only augment this restriction further.

2197 6.7.1.2 Specification of Management Functions (FMT_SMF)

2198 **6.7.1.2.1 FMT_SMF.1: Specification of Management Functions**

2199 FMT_SMF.1.1 The TSF shall be capable of performing the following
 2200 management functions: *list of management functions as*
 2201 *defined in Table 14 and Table 15 and additional*
 2202 *functionalities: none* ¹⁵⁸.

2203 Hierarchical to: No other components.

2204 Dependencies: No dependencies.

2294		initial values to override the default values when an object
2295		or information is created.
2296	Hierarchical to:	No other components.
2297	Dependencies:	FMT_MSA.1 Management of security attributes
2298		FMT_SMR.1 Security roles
2299		
2300	6.8	Class FPR: Privacy
2301	6.8.1	Communication Concealing (FPR_CON)
2302	6.8.1.1	FPR_CON.1: Communication Concealing
2303	FPR_CON.1.1	The TSF shall enforce the <i>Firewall SFP</i> ¹⁹⁷ in order to
2304		ensure that no personally identifiable information (PII) can
2305		be obtained by an analysis of <i>frequency, load, size or the</i>
2306		<i>absence of external communication</i> ¹⁹⁸ .
2307	FPR_CON.1.2	The TSF shall connect to <i>the Gateway Administrator,</i>
2308		<i>authorized External Entity in the WAN</i> ¹⁹⁹ in intervals as

194 [assignment: *access control SFP, information flow control SFP*]

195 [selection, choose one of: *restrictive, permissive, [assignment: other property]*]

196 [assignment: *the authorised identified roles*]

197 [assignment: *information flow policy*]

198 [assignment: *characteristics of the information flow that need to be concealed*]

199 [assignment: *list of external entities*]

2309		follows <u>daily, other interval: none</u> ²⁰⁰ to conceal the data
2310		flow ²⁰¹ .
2311	Hierarchical to:	No other components.
2312	Dependencies:	No dependencies.
2313	6.8.2 Pseudonymity (FPR_PSE)	
2314	6.8.2.1 FPR_PSE.1 Pseudonymity	
2315	FPR_PSE.1.1	The TSF shall ensure that <i>external entities in the WAN</i> ²⁰²
2316		are unable to determine the real user name bound to
2317		<i>information neither relevant for billing nor for a secure</i>
2318		<i>operation of the Grid sent to parties in the WAN</i> ²⁰³ .
2319	FPR_PSE.1.2	The TSF shall be able to provide <i>aliases as defined by the</i>
2320		<i>Processing Profiles</i> ²⁰⁴ of the real user name for the
2321		Meter and Gateway identity ²⁰⁵ to <i>external entities in the</i>
2322		<i>WAN</i> ²⁰⁶ .
2323	FPR_PSE.1.3	The TSF shall <u>determine an alias for a user</u> ²⁰⁷ and verify
2324		that it conforms to the <i>alias given by the Gateway</i>
2325		<i>Administrator in the Processing Profile</i> ²⁰⁸ .
2326	Hierarchical to:	No other components.
2327	Dependencies:	No dependencies.
2328	Application Note 35:	When the TOE submits information about the consumption
2329		or production of a certain commodity that is not relevant for
2330		the billing process nor for a secure operation of the Grid,
2331		there is no need that this information is sent with a direct

200 [selection: *weekly, daily, hourly, [assignment: other interval]*]

201 The TOE uses a randomized value of about ±50 percent per delivery.

202 [assignment: *set of users and/or subjects*]

203 [assignment: *list of subjects and/or operations and/or objects*]

204 [assignment: *number of aliases*]

205 [refinement: *of the real user name*]

206 [assignment: *list of subjects*]

207 [selection, choose one of: *determine an alias for a user, accept the alias from the user*]

208 [assignment: *alias metric*]

2332 link to the identity of the consumer. In those cases, the
 2333 TOE shall replace the identity of the Consumer by a
 2334 pseudonymous identifier. Please note that the identity of
 2335 the Consumer may not be their name but could also be a
 2336 number (e.g. consumer ID) used for billing purposes.

2337 A Gateway may use more than one pseudonymous
 2338 identifier.

2339 A complete anonymisation would be beneficial in terms of
 2340 the privacy of the consumer. However, a complete
 2341 anonymous set of information would not allow the external
 2342 entity to ensure that the data comes from a trustworthy
 2343 source.

2344 Please note that an information flow shall only be initiated
 2345 if allowed by a corresponding Processing Profile.

2346

2347 **6.9 Class FPT: Protection of the TSF**

2348 **6.9.1 Fail secure (FPT_FLS)**

2349 6.9.1.1 FPT_FLS.1: Failure with preservation of secure state

2350 FPT_FLS.1.1 The TSF shall preserve a secure state when the following
 2351 types of failures occur:

- 2352 • *the deviation between local system time of the TOE*
- 2353 *and the reliable external time source is too large,*
- 2354 • *TOE hardware / firmware integrity violation or*
- 2355 • *TOE software application integrity violation* ²⁰⁹.

2356 Hierarchical to: No other components.

2357 Dependencies: No dependencies.

2358 **Application Note 36:** The local clock shall be as exact as required by normative
 2359 or legislative regulations. If no regulation exists, a

²⁰⁹ [assignment: *list of types of failures in the TSF*]

2360 maximum deviation of 3% of the measuring period is
 2361 allowed to be in conformance with [PP_GW].

2362 **6.9.2 Replay Detection (FPT_RPL)**

2363 6.9.2.1 FPT_RPL.1: Replay detection

2364 FPT_RPL.1.1 The TSF shall detect replay for the following entities: *all*
 2365 *external entities* ²¹⁰.

2366 FPT_RPL.1.2 The TSF shall perform *ignore replayed data* ²¹¹ when
 2367 replay is detected.

2368 Hierarchical to: No other components.

2369 Dependencies: No dependencies.

2370 **6.9.3 Time stamps (FPT_STM)**

2371 6.9.3.1 FPT_STM.1: Reliable time stamps

2372 FPT_STM.1.1 The TSF shall be able to provide reliable time stamps.

2373 Hierarchical to: No other components.

2374 Dependencies: No dependencies.

2375

2376 **6.9.4 TSF self test (FPT_TST)**

2377 6.9.4.1 FPT_TST.1: TSF testing

2378 FPT_TST.1.1 The TSF shall run a suite of self tests during initial startup,
 2379 at the request of a user and periodically during normal
 2380 operation ²¹² to demonstrate the correct operation of the
 2381 TSF ²¹³.

210 [assignment: *list of identified entities*]

211 [assignment: *list of specific actions*]

212 [selection: *during initial start-up, periodically during normal operation, at the request of the authorised user, at the conditions*[assignment: *conditions under which self test should occur*]]

213 [selection: [assignment: *parts of TSF*], *the TSF*]

2382	FPT_TST.1.2	The TSF shall provide authorised users with the capability
2383		to verify the integrity of <u>TSF data</u> ²¹⁴ .
2384	FPT_TST.1.3	The TSF shall provide authorised users with the capability
2385		to verify the integrity of <u>TSF</u> ²¹⁵ .
2386	Hierarchical to:	No other components.
2387	Dependencies:	No dependencies.

2388 **6.9.5 TSF physical protection (FPT_PHP)**

2389 6.9.5.1 FPT_PHP.1: Passive detection of physical attack

2390	FPT_PHP.1.1	The TSF shall provide unambiguous detection of physical
2391		tampering that might compromise the TSF.
2392	FPT_PHP.1.2	The TSF shall provide the capability to determine whether
2393		physical tampering with the TSF's devices or TSF
2394		elements has occurred.
2395	Hierarchical to:	No other components.
2396	Dependencies:	No dependencies.
2397		

2398 **6.10 Class FTP: Trusted path/channels**

2399 **6.10.1 Inter-TSF trusted channel (FTP_ITC)**

2400 6.10.1.1 FTP_ITC.1/WAN: Inter-TSF trusted channel for WAN

2401	FTP_ITC.1.1/WAN	The TSF shall provide a communication channel between
2402		itself and another trusted IT product that is logically distinct
2403		from other communication channels and provides assured
2404		identification of its end points and protection of the channel
2405		data from modification or disclosure.

214 [selection: [assignment: parts of TSF data], TSF data]

215 [selection: [assignment: parts of TSF], TSF]

2406	FTP_ITC.1.2/WAN	The TSF shall permit <u>the TSF</u> ²¹⁶ to initiate communication
2407		via the trusted channel.
2408	FTP_ITC.1.3/WAN	The TSF shall initiate communication via the trusted
2409		channel for <i>all communications to external entities in the</i>
2410		<i>WAN</i> ²¹⁷ .
2411	Hierarchical to:	No other components
2412	Dependencies:	No dependencies.
2413	6.10.1.2 FTP_ITC.1/MTR:	Inter-TSF trusted channel for Meter
2414	FTP_ITC.1.1/MTR	The TSF shall provide a communication channel between
2415		itself and another trusted IT product that is logically distinct
2416		from other communication channels and provides assured
2417		identification of its end points and protection of the channel
2418		data from modification or disclosure.
2419	FTP_ITC.1.2/MTR	The TSF shall permit the Meter and the TOE ²¹⁸ to initiate
2420		communication via the trusted channel.
2421	FTP_ITC.1.3/MTR	The TSF shall initiate communication via the trusted
2422		channel for <i>any communication between a Meter and the</i>
2423		<i>TOE</i> ²¹⁹ .
2424	Hierarchical to:	No other components.
2425	Dependencies:	No dependencies.
2426	Application Note 37:	The corresponding cryptographic primitives are defined by
2427		FCS_COP.1/MTR.
2428	6.10.1.3 FTP_ITC.1/USR:	Inter-TSF trusted channel for User
2429	FTP_ITC.1.1/USR	The TSF shall provide a communication channel between
2430		itself and another trusted IT product that is logically distinct
2431		from other communication channels and provides assured

²¹⁶ [selection: *the TSF, another trusted IT product*]

²¹⁷ [assignment: *list of functions for which a trusted channel is required*]

²¹⁸ [selection: *the TSF, another trusted IT product*]

²¹⁹ [assignment: *list of functions for which a trusted channel is required*]

2432		identification of its end points and protection of the channel
2433		data from modification or disclosure.
2434	FTP_ITC.1.2/USR	The TSF shall permit the Consumer, the Service
2435		Technician ²²⁰ to initiate communication via the trusted
2436		channel.
2437	FTP_ITC.1.3/USR	The TSF shall initiate communication via the trusted
2438		channel for <i>any communication between a Consumer and</i>
2439		<i>the TOE and the Service Technician and the TOE</i> ²²¹ .
2440	Hierarchical to:	No other components.
2441	Dependencies:	No dependencies.
2442		

2443 6.11 Security Assurance Requirements for the TOE

2444 The minimum Evaluation Assurance Level for this Security Target is **EAL 4 augmented**
 2445 **by AVA_VAN.5 and ALC_FLR.2**. The following table lists the assurance components
 2446 which are therefore applicable to this ST.

Assurance Class	Assurance Component
Development	ADV_ARC.1
	ADV_FSP.4
	ADV_IMP.1
	ADV_TDS.3
Guidance documents	AGD_OPE.1
	AGD_PRE.1
Life-cycle support	ALC_CMC.4

220 [selection: *the TSF, another trusted IT product*]

221 [assignment: *list of functions for which a trusted channel is required*]

Assurance Class	Assurance Component
	ALC_CMS.4
	ALC_DEL.1
	ALC_DVS.1
	ALC_LCD.1
	ALC_TAT.1
	ALC_FLR.2
Security Target Evaluation	ASE_CCL.1
	ASE_ECD.1
	ASE_INT.1
	ASE_OBJ.2
	ASE_REQ.2
	ASE_SPD.1
	ASE_TSS.1
Tests	ATE_COV.2
	ATE_DPT.1
	ATE_FUN.1
	ATE_IND.2
Vulnerability Assessment	AVA_VAN.5

2448 **6.12 Security Requirements rationale**

2449 **6.12.1 Security Functional Requirements rationale**

2450 6.12.1.1 Fulfilment of the Security Objectives

2451 This chapter proves that the set of security requirements (TOE) is suited to fulfil the
 2452 security objectives described in chapter 4 and that each SFR can be traced back to the
 2453 security objectives. At least one security objective exists for each security requirement.

	O.Firewall	O.SeparateIF	O.Conceal	O.Meter	O.Crypt	O.Time	O.Protect	O.Manage-	O.Log	O.Access

2454 **Table 17: Fulfilment of Security Objectives**

2455 The following paragraphs contain more details on this mapping.

2456 **6.12.1.1.1 O.Firewall**

2457 O.Firewall is met by a combination of the following SFRs:

- 2458 • **FDP_IFC.2/FW** defines that the TOE shall implement an information flow policy
- 2459 for its firewall functionality.
- 2460 • **FDP_IFF.1/FW** defines the concrete rules for the firewall information flow policy.
- 2461 • **FTP_ITC.1/WAN** defines the policy around the trusted channel to parties in the
- 2462 WAN.

2463 **6.12.1.1.2 O.SeparateIF**

2464 O.SeparateIF is met by a combination of the following SFRs:

- 2465 • **FDP_IFC.2/FW** and **FDP_IFF.1/FW** implicitly require the TOE to implement
- 2466 physically separate ports for WAN and LMN.
- 2467 • **FPT_TST.1** implements a self test that also detects whether the ports for WAN
- 2468 and LAN have been interchanged.

2469 **6.12.1.1.3 O.Conceal**2470 O.Conceal is completely met by **FPR_CON.1** as directly follows.2471 **6.12.1.1.4 O.Meter**

2472 O.Meter is met by a combination of the following SFRs:

- 2473 • **FDP_IFC.2/MTR** and **FDP_IFF.1/MTR** define an information flow policy to
2474 introduce how the Gateway shall handle Meter Data.
- 2475 • **FCO_NRO.2** ensure that all Meter Data will be signed by the Gateway (invoking
2476 the services of its Security Module) before being submitted to external entities.
- 2477 • **FPR_PSE.1** defines requirements around the pseudonymization of Meter
2478 identities for Status data.
- 2479 • **FTP_ITC.1/MTR** defines the requirements around the Trusted Channel that
2480 shall be implemented by the Gateway in order to protect information submitted
2481 via the Gateway and external entities in the WAN or the Gateway and a
2482 distributed Meter.

2483

2484 **6.12.1.1.5 O.Crypt**

2485 O.Crypt is met by a combination of the following SFRs:

- 2486 • **FCS_CKM.4** defines the requirements around the secure deletion of ephemeral
2487 cryptographic keys.
- 2488 • **FCS_CKM.1/TLS** defines the requirements on key negotiation for the TLS
2489 protocol.
- 2490 • **FCS_CKM.1/CMS** defines the requirements on key generation for symmetric
2491 encryption within CMS.
- 2492 • **FCS_COP.1/TLS** defines the requirements around the encryption and
2493 decryption capabilities of the Gateway for communications with external parties
2494 and to Meters.
- 2495 • **FCS_COP.1/CMS** defines the requirements around the encryption and
2496 decryption of content and administration data.
- 2497 • **FCS_CKM.1/MTR** defines the requirements on key negotiation for meter com-
2498 munication encryption.
- 2499 • **FCS_COP.1/MTR** defines the cryptographic primitives for meter
2500 communication encryption.
- 2501 • **FCS_COP.1/HASH** defines the requirements on hashing that are needed in the
2502 context of digital signatures (which are created and verified by the Security
2503 Module).
- 2504 • **FCS_COP.1/MEM** defines the requirements around the encryption of TSF data.
- 2505 • **FPT_RPL.1** ensures that a replay attack for communications with external
2506 entities is detected.

2507 **6.12.1.1.6 O.Time**

2508 O.Time is met by a combination of the following SFRs:

- 2509 • **FDP_IFC.2/MTR** and **FDP_IFF.1/MTR** define the required update functionality
2510 for the local time as part of the information flow control policy for handling Meter
2511 Data.
- 2512 • **FPT_STM.1** defines that the TOE shall be able to provide reliable time stamps.

2513

2514 **6.12.1.1.7 O.Protect**

2515 O.Protect is met by a combination of the following SFRs:

- 2516 • **FCS_COP.1/MEM** defines that the TOE shall encrypt its TSF and user data as
2517 long as it is not in use.
- 2518 • **FDP_RIP.2** defines that the TOE shall make information unavailable as soon
2519 as it is no longer needed.
- 2520 • **FDP_SDI.2** defines requirements around the integrity protection for stored data.
- 2521 • **FPT_FLS.1** defines requirements that the TOE falls back to a safe state for
2522 specific error cases.
- 2523 • **FPT_TST.1** defines the self testing functionality to detect whether the interfaces
2524 for WAN and LAN are separate.
- 2525 • **FPT_PHP.1** defines the exact requirements around the physical protection that
2526 the TOE has to provide.

2527 **6.12.1.1.8 O.Management**

2528 O.Management is met by a combination of the following SFRs:

- 2529 • **FIA_ATD.1** defines the attributes for users.
- 2530 • **FIA_AFL.1** defines the requirements if the authentication of users fails multiple
2531 times.
- 2532 • **FIA_UAU.2** defines requirements around the authentication of users.
- 2533 • **FIA_UID.2** defines requirements around the identification of users.
- 2534 • **FIA_USB.1** defines that the TOE must be able to associate users with subjects
2535 acting on behalf of them.
- 2536 • **FMT_MOF.1** defines requirements around the limitations for management of
2537 security functions.
- 2538 • **FMT_MSA.1/AC** defines requirements around the limitations for management
2539 of attributes used for the Gateway access SFP.
- 2540 • **FMT_MSA.1/FW** defines requirements around the limitations for management
2541 of attributes used for the Firewall SFP.
- 2542 • **FMT_MSA.1/MTR** defines requirements around the limitations for management
2543 of attributes used for the Meter SFP.
- 2544 • **FMT_MSA.3/AC** defines the default values for the Gateway access SFP.
- 2545 • **FMT_MSA.3/FW** defines the default values for the Firewall SFP.
- 2546 • **FMT_MSA.3/MTR** defines the default values for the Meter SFP.

- 2547
- **FMT_SMF.1** defines the management functionalities that the TOE must offer.
- 2548
- **FMT_SMR.1** defines the role concept for the TOE.

2549

6.12.1.1.9 O.Log

2550 O.Log defines that the TOE shall implement three different audit processes that are
2551 covered by the Security Functional Requirements as follows:

2552

System Log

2553 The implementation of the system log itself is covered by the use of **FAU_GEN.1/SYS**.
2554 **FAU_ARP.1/SYS** and **FAU_SAA.1/SYS** allow to define a set of criteria for automated
2555 analysis of the audit and a corresponding response. **FAU_SAR.1/SYS** defines the
2556 requirements around the audit review functions and that access to them shall be limited
2557 to authorised Gateway Administrators via the IF_GW_WAN interface and to authorised
2558 Service Technicians via the IF_GW_SRV interface. Finally, **FAU_STG.4/SYS** defines
2559 the requirements on what should happen if the audit log is full.

2560

Consumer Log

2561 The implementation of the consumer log itself is covered by the use of
2562 **FAU_GEN.1/CON**. **FAU_STG.4/CON** defines the requirements on what should happen
2563 if the audit log is full. **FAU_SAR.1/CON** defines the requirements around the audit review
2564 functions for the consumer log and that access to them shall be limited to authorised
2565 Consumer via the IF_GW_CON interface. **FTP_ITC.1/USR** defines the requirements on
2566 the protection of the communication of the Consumer with the TOE.

2567

Calibration Log

2568 The implementation of the calibration log itself is covered by the use of
2569 **FAU_GEN.1/CAL**. **FAU_STG.4/CAL** defines the requirements on what should happen
2570 if the audit log is full. **FAU_SAR.1/CAL** defines the requirements around the audit review
2571 functions for the calibration log and that access to them shall be limited to authorised
2572 Gateway Administrators via the IF_GW_WAN interface.

2573 **FAU_GEN.2**, **FAU_STG.2** and **FPT_STM.1** apply to all three audit processes.

2574

6.12.1.1.10 O.Access

2575 **FDP_ACC.2** and **FDP_ACF.1** define the access control policy as required to address
2576 O.Access. **FIA_UAU.5** ensures that entities that would like to communicate with the TOE
2577 are authenticated before any action whereby **FIA_UAU.6** ensures that external entities

2578 in the WAN are re-authenticated after the session key has been used for a certain
2579 amount of time.

2580 6.12.1.2 Fulfilment of the dependencies

2581 The following table summarises all TOE functional requirements dependencies of this
2582 ST and demonstrates that they are fulfilled.

SFR	Dependencies	Fulfilled by
FAU_ARP.1/SYS	FAU_SAA.1 Potential violation analysis	FAU_SAA.1/SYS
FAU_GEN.1/SYS	FPT_STM.1 Reliable time stamps	FPT_STM.1
FAU_SAA.1/SYS	FAU_GEN.1 Audit data generation	FAU_GEN.1/SYS
FAU_SAR.1/SYS	FAU_GEN.1 Audit data generation	FAU_GEN.1/SYS
FAU_STG.4/SYS	FAU_STG.1 Protected audit trail storage	FAU_STG.2
FAU_GEN.1/CON	FPT_STM.1 Reliable time stamps	FPT_STM.1
FAU_SAR.1/CON	FAU_GEN.1 Audit data generation	FAU_GEN.1/CON
FAU_STG.4/CON	FAU_STG.1 Protected audit trail storage	FAU_STG.2
FAU_GEN.1/CAL	FPT_STM.1 Reliable time stamps	FPT_STM.1
FAU_SAR.1/CAL	FAU_GEN.1 Audit data generation	FAU_GEN.1/CAL
FAU_STG.4/CAL	FAU_STG.1 Protected audit trail storage	FAU_STG.2
FAU_GEN.2	FAU_GEN.1 Audit data generation FIA_UID.1 Timing of identification	FAU_GEN.1/SYS FAU_GEN.1/CON FIA_UID.2
FAU_STG.2	FAU_GEN.1 Audit data generation	FAU_GEN.1/SYS FAU_GEN.1/CON FAU_GEN.1/CAL

FCO_NRO.2	FIA_UID.1 Timing of identification	FIA_UID.2
FCS_CKM.1/TLS	[FCS_CKM.2 Cryptographic key distribution, or FCS_COP.1 Cryptographic operation] FCS_CKM.4 Cryptographic key destruction	FCS_COP.1/TLS FCS_CKM.4

2583 **Table 18: SFR Dependencies**

2584 6.12.1.3 Justification for missing dependencies

2585 Dependency FCS_CKM.1 for FCS_COP.1/MEM ist not fulfilled. For the key generation
 2586 process an external security module (“D-HSM”) is used so that the key is imported from
 2587 an HSM during TOE production.

2588 The hash algorithm as defined in FCS_COP.1/HASH does not need any key material.
 2589 As such the dependency to an import or generation of key material is omitted for this
 2590 SFR.

2591 **6.12.2 Security Assurance Requirements rationale**

2592 The decision on the assurance level has been mainly driven by the assumed attack
 2593 potential. As outlined in the previous chapters of this Security Target it is assumed that
 2594 – at least from the WAN side – a high attack potential is posed against the security
 2595 functions of the TOE. This leads to the use of AVA_VAN.5 (Resistance against high
 2596 attack potential).

2597 In order to keep evaluations according to this Security Target commercially feasible EAL
 2598 4 has been chosen as assurance level as this is the lowest level that provides the
 2599 prerequisites for the use of AVA_VAN.5.

2600 Eventually, the augmentation by ALC_FLR.2 has been chosen to emphasize the
 2601 importance of a structured process for flaw remediation at the developer’s side,
 2602 specifically for such a new technology.

2603 6.12.2.1 Dependencies of assurance components

2604 The dependencies of the assurance requirements taken from EAL 4 are fulfilled
 2605 automatically. The augmentation by AVA_VAN.5 and ALC_FLR.2 does not introduce
 2606 additional assurance components that are not contained in EAL 4.

2607 7 TOE Summary Specification

2608 The following paragraph provides a TOE summary specification describing how the TOE
2609 meets each SFR.

2610

2611 7.1 SF.1: Authentication of Communication and Role Assignment 2612 for external entities

2613 The TOE contains a software module that authenticates all communication channels
2614 with WAN, HAN and LMN networks. The authentication is based on the TLS 1.2 protocol
2615 compliant to [RFC 5246]. According to [TR-03109], this TLS authentication mechanism
2616 is used for all TLS secured communications channels with external entities. The TOE
2617 does always implement the bidirectional authentication as required by [TR-03109-1] with
2618 one exception: if the Consumer requests a password-based authentication from the
2619 GWA according to [TR-03109-1], and the GWA activates this authentication method for
2620 this Consumer, the TOE uses a unidirectional TLS authentication. Thus, although the
2621 client has not sent a valid certificate, the TOE continues the TLS authentication process
2622 with the password authentication process for this client (see [RFC 5246, chap. 7.4.6.]).
2623 The password policy to be fulfilled hereby is that the password must be at least 10 char-
2624 acters long containing at least one character of each of the following character groups:
2625 capital letters, small letters, digits, and special characters (!"§\$%&/()=?+*~#',;:-_). Fur-
2626 ther characters could also be used.

2627 [TR-03109-1] requires the TOE to use elliptical curves conforming to [RFC 5289]
2628 whereas the following cipher suites are supported:

- 2629 • TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256,
- 2630 • TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384,
- 2631 • TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256, and
- 2632 • TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384.

2633 The following elliptical curves are supported by the TOE

- 2634 • BrainpoolP256r1 (according to [RFC 5639]),
- 2635 • BrainpoolP384r1 (according to [RFC 5639]),
- 2636 • BrainpoolP512r1 (according to [RFC 5639]),
- 2637 • NIST P-256 (according to [RFC 5114]), and
- 2638 • NIST P-384 (according to [RFC 5114]).

2639 Alongside, the TOE supports the case of unidirectional communication with wireless me-
2640 ter (via the wM-Bus protocol), where the external entity is authenticated via AES with
2641 CMAC authentication. In this case, the AES algorithm is operating in CBC mode with
2642 128-bit symmetric keys. The authentication is successful in case that the CMAC has
2643 been successfully verified by the use of a cryptographic key K_{mac} . The cryptographic key
2644 for CMAC authentication (K_{mac}) is derived from the meter individual key MK conformant
2645 to [TR-03116-3, chap. 7.2]. The meter individual key MK (brought into the TOE by the
2646 GWA) is selected by the TOE through the MAC-protected but unencrypted meter-id sub-
2647 mitted by the meter.

2648 The generation of the cryptographic key material for TLS secured communication chan-
2649 nels utilizes a Security Module. This Security Module is compliant to [TR-03109-2] and
2650 evaluated according to [SecModPP].

2651 The destruction of cryptographic key material used by the TOE is performed through
2652 “zeroisation”. The TOE stores all ephemeral keys used for TLS secured communication
2653 or other cryptographic operations in the RAM only. For instance, whenever a TLS se-
2654 cured communication is terminated, the TOE wipes the RAM area used for the crypto-
2655 graphic key material with 0-bytes directly after finishing the usage of that material.

2656 The TOE receives the authentication certificate of the external entity during the hand-
2657 shake phase of the TLS protocol. For the establishment of the TLS secured communi-
2658 cation channel, the TOE verifies the correctness of the signed data transmitted during
2659 the TLS protocol handshake phase. While importing an authentication certificate the
2660 TOE verifies the certificate chain of the certificate for all certificates of the SM-PKI ac-
2661 cording to [TR-03109-4]. Note, that the certificate used for the TLS-based authentication
2662 of wired meters is self-signed and not part of the SM-PKI. Additionally, the TOE checks
2663 whether the certificate is configured by the Gateway Administrator for the used interface,
2664 and whether the remote IP address used and configured in the TSF data are identical
2665 (**FIA_USB.1**). The TOE does not check the certificate’s revocation status. In order to
2666 authenticate the external entity, the key material of the TOE’s communication partner
2667 must be known and trusted.

2668 The following communication types are known to the TOE ²²³:

2669 a) WAN communication via IF_GW_WAN

²²³ Please note that the TOE additionally offers the interface IF_GW_SM to the certified Security Module built into the TOE.

- 2670 b) LMN communication via IF_GW_MTR (wireless or wired Meter)
2671 c) HAN communication via IF_GW_CON, IF_GW_CLS or IF_GW_SRV

2672 Except the communication with wireless meters at IF_GW_MTR, all communication
2673 types are TLS-based. In order to accept a TLS communication connection as being au-
2674 thenticated, the following conditions must be fulfilled:

- 2675 a) The TLS channel must have been established successfully with the required
2676 cryptographic mechanisms.
2677 b) The certificate of the external entity must be known and trusted through config-
2678 uration by the Gateway Administrator, and associated with the according com-
2679 munication type²²⁴.

2680 For the successfully authenticated external entity, the TOE performs an internal assign-
2681 ment of the communication type based on the certificate received at the external inter-
2682 face if applicable. The user identity is associated with the name of the certificate owner
2683 in case of a certificate-based authentication or with the user name in case of a password-
2684 based authentication at interface IF_GW_CON.

2685 For the LMN communication of the TOE with wireless (a.k.a. wM-Bus-based) meters,
2686 the external entity is authenticated by the use of the AES-CMAC algorithm and the me-
2687 ter-ID for wired Meters is used for association to the user identity (**FIA_USB.1**). This
2688 communication is only allowed for meters not supporting TLS-based communication
2689 scenarios.

2690 **FCS_CKM.1/TLS** is fulfilled by the TOE through the implementation of the pseudoran-
2691 dom function of the TLS protocol compliant to [RFC 5246] while the Security Module is
2692 used by the TOE for the generation of the cryptographic key material. The use of TLS
2693 according to [RFC 5246] and the use of the postulated cipher suites according to
2694 [RFC 5639] fulfill the requirement **FCS_COP.1/TLS**. The requirements
2695 **FCS_CKM.1/MTR** and **FCS_COP.1/MTR** are fulfilled by the use of AES-CMAC-secured
2696 communication for wireless meters. The requirement **FCS_CKM.4** is fulfilled by the de-
2697 scribed method of “zeroisation” when destroying cryptographic key material. The imple-
2698 mentation of the described mechanisms (especially the use of TLS and AES-CBC with
2699 CMAC) fulfills the requirements **FTP_ITC.1/WAN**, **FTP_ITC.1/MTR**, and

²²⁴ Of course, this does not apply if password-based authentication is configured at IF_GW_CON.

2700 **FTP_ITC.1/USR. FPT_RPL.1** is fulfilled by the use of the TLS protocol respectively the
2701 integration of transmission counters according to [TR-03116-3, chap. 7.3].

2702 A successfully established connection will be automatically disconnected by the TOE if
2703 a TLS channel to the WAN is established more than 48 hours, if a TLS channel to the
2704 LMN has transmitted more than 5 MB of information or if a channel to a local user is
2705 inactive for a time configurable by the authorised Gateway Administrator of up to 10
2706 minutes, and a new connection establishment will require a new full authentication pro-
2707 cedure (**FIA_UAU.6**). In any case – whether the connection has been successfully es-
2708 tablished or not – all associated resources related with the connection or connection
2709 attempt are freed. The implementation of this requirement is done by means of the TOE's
2710 operation system monitoring and limiting the resources of each process. This means
2711 that with each connection (or connection attempt) an internal session is created that is
2712 associated with resources monitored and limited by the TOE. All resources are freed
2713 even before finishing a session if the respective resource is no longer needed so that no
2714 previous information content of a resource is made available. Especially, the associated
2715 cryptographic key material is wiped as soon it is no longer needed. As such, the TOE
2716 ensures that during the phase of connection termination the internal session is also ter-
2717 minated and by this, all internal data (associated cryptographic key material and volatile
2718 data) is wiped by the zeroisation procedure described. Allocated physical resources are
2719 also freed. In case non-volatile data is no longer needed, the associated resources data
2720 are freed, too. The TOE doesn't reuse any objects after deallocation of the resource
2721 (**FDP_RIP.2**).

2722 If the external entity can be successfully authenticated on basis of the received certificate
2723 (or the password in case of a consumer using password authentication) and the ac-
2724 claimed identity could be approved for the used external interface, the TOE associates
2725 the user identity, the authentication status and the connecting network to the role ac-
2726 cording to the internal role model (**FIA_ATD.1**). In order to implement this, the TOE uti-
2727 lizes an internal data model which supplies the allowed communication network and
2728 other restricting properties linked with the submitted security attribute on the basis of the
2729 submitted authentication data providing the multiple mechanisms for authentication of
2730 any user's claimed identity according to the necessary rules according to [TR-03109-1]
2731 (**FIA_UAU.5**).

2732 In case of wireless meter communication (via the wM-Bus protocol), the security attribute
2733 of the Meter is the meter-id authenticated by the CMAC, where the meter-id is the identity
2734 providing criterion that is used by the TOE. The identity of the Meter is associated to the

2735 successfully authenticated external entity by the TOE and linked to the respective role
2736 according to Table 5 and its active session. In this case, the identity providing criterion
2737 is also the meter-id.

2738 The TOE enforces an explicit and complete security policy protecting the data flow for
2739 all external entities (**FDP_IFC.2/FW**, **FDP_IFF.1/FW**, **FDP_IFC.2/MTR**,
2740 **FDP_IFF.1/MTR**). The security policy defines the accessibility of data for each external
2741 entity and additionally the permitted actions for these data. Moreover, the external enti-
2742 ties do also underlie restrictions for the operations which can be executed with the TOE
2743 (**FDP_ACF.1**). In case that it is not possible to authenticate an external entity success-
2744 fully (e.g. caused by unknown authentication credentials), no other action is allowed on
2745 behalf of this user and the concerning connection is terminated (**FIA_UAU.2**). Any com-
2746 munication is only possible after successful authentication and identification of the ex-
2747 ternal entity (**FIA_UID.2**, **FIA_USB.1**).

2748 The reception of the wake-up service data package is a special case that requests the
2749 TOE to establish a TLS authenticated and protected connection to the Gateway Admin-
2750 istrator. The TOE validates the data package due to its compliance to the structure de-
2751 scribed in [TR-03109-1] and verifies the ECDSA signature with the public key of the
2752 Gateway Administrator's certificate which must be known and trusted to the TOE. The
2753 TOE does not perform a revocation check or any validity check compliant to the shell
2754 model. The TOE verifies the electronic signature successfully when the certificate is
2755 known, trusted and associated to the Gateway Administrator. The TOE establishes the
2756 connection to the Gateway Administrator when the package has been validated due to
2757 its structural conformity, the signature has been verified and the integrated timestamp
2758 fulfills the requirements of [TR-03109-1]. Receiving the data package and the successful
2759 validation of the wake-up package does not mean that the Gateway Administrator has
2760 successfully been authenticated.

2761 If the Gateway Administrator could be successfully authenticated based on the certificate
2762 submitted during the TLS handshake phase, the role will be assigned by the TOE ac-
2763 cording to now approved identity based on the internal role model and the TLS channel
2764 will be established.

2765 **WAN roles**

2766 The TOE assigns the following roles in the WAN communication (**FMT_SMR.1**):

- 2767 • authorised Gateway Administrator,
- 2768 • authorised External Entity.

2769 The role assignment is based on the X.509 certificate used by the external entity during
2770 TLS connection establishment. The TOE has explicit knowledge of the Gateway Admin-
2771 istrator's certificate and the assignment of the role "Gateway Administrator" requires the
2772 successful authentication of the WAN connection.

2773 The assignment of the role "Authorized External Entity" requires the X.509 certificate
2774 that is used during the TLS handshake to be part of an internal trust list that is under
2775 control of the TOE.

2776 The role "Authorized External Entity" can be assigned to more than one external entity.

2777 **HAN roles**

2778 The TOE differentiates and assigns the following roles in the HAN communication
2779 (**FMT_SMR.1**):

- 2780 • authorised Consumer
- 2781 • authorised Service Technician

2782 The role assignment is based on the X.509 certificate used by the external entity for
2783 TLS-secured communication channels or on password-based authentication at interface
2784 IF_GW_CON if configured (**FIA_USB.1**).

2785 The assignment of roles in the HAN communication requires the successful identification
2786 of the external entity as a result of a successful authentication based on the certificate
2787 used for the HAN connection. The certificates used to authenticate the "Consumer" or
2788 the "Service Technician" are explicitly known to the TOE through configuration by the
2789 Gateway Administrator.

2790 **Multi-client capability in the HAN**

2791 The HAN communication might use more than one, parallel and independent authenti-
2792 cated communication channels. The TOE ensures that the certificates that are used for
2793 the authentication are different from each other.

2794 The role "Consumer" can be assigned to multiple, parallel sessions. The TOE ensures
2795 that these parallel sessions are logically distinct from each other by the use of different
2796 authentication information. This ensures that only the Meter Data associated with the
2797 authorized user are provided and Meter Data of other users are not accessible.

2798 **LMN roles**

2799 One of the following authentication mechanisms is used for Meters:

- 2800 a) authentication by the use of TLS according to [RFC 5246] for wired Meters
2801 a) authentication by the use of AES with CMAC authentication according to
2802 [RFC 3394] for wireless Meters.

2803 The TOE explicitly knows the identification credentials needed for authentication (X.509
2804 certificate when using TLS; meter-id in conjunction with CMAC and known K_{mac} when
2805 using AES) through configuration by the Gateway Administrator. If the Meter could be
2806 successfully authenticated and the claimed identity could thus be proved, the according
2807 role “Authorised External Entity” is assigned by the TOE for this Meter at IF_GW_MTR
2808 based on the internal role model.

2809 **LMN multi-client capabilities**

2810 The LMN communication can be run via parallel, logically distinct and separately au-
2811 thenticated communication channels. The TOE ensures that the authentication creden-
2812 tials of each separate channel are different.

2813 The TOE’s internal policy for access to data and objects under control of the TOE is
2814 closely linked with the identity of the external entity at IF_GW_MTR according to the
2815 TOE-internal role model. Based on the successfully verified authentication data, a per-
2816 mission catalogue with security attributes is internally assigned, which defines the al-
2817 lowed actions and access permissions within a communication channel.

2818 The encapsulation of the TOE processes run by this user is realized through the mech-
2819 anisms offered by the TOE’s operating system and very restrictive user rights for each
2820 process. Each role is assigned to a separate, limited user account in the TOE’s operating
2821 system. For all of these accounts, it is only allowed to read, write or execute the files
2822 absolutely necessary for implementing the program logic. For each identity interacting
2823 with the TOE, a separate operating system process is started. Especially, the databases
2824 used by the TOE and the logging service are adequately separated for enforcement of
2825 the necessary security domain separation (**FDP_ACF.1**). The allowed actions and ac-
2826 cess permissions and associated objects are assigned to the successfully approved
2827 identity of the user based on the used authentication credentials and the resulting asso-
2828 ciated role. The current session is unambiguously associated with this user. No interac-
2829 tion (e.g. access to Meter Data) is possible without an appropriate permission catalogue
2830 (**FDP_ACC.2**). The freeing of the role assignment and associated resources are ensured
2831 through the monitoring of the current session.

2832 7.2SF.2: Acceptance and Deposition of Meter Data, Encryption of 2833 Meter Data for WAN transmission

2834 The TOE receives Meter Data from an LMN communication channel and deposits these
2835 Meter Data with the associated data for tariffing in a database especially assigned to this
2836 individual Meter residing in an encrypted file system (**FCS_COP.1/MEM**). The time in-
2837 terval for receiving or retrieving Meter Data can be configured individually per meter
2838 through a successfully authenticated Gateway Administrator and are initialized by the
2839 TOE during the setup procedure with pre-defined values.

2840 The Meter Data are cryptographically protected and their integrity is verified by the TOE
2841 before the tariffing and deposition is performed. In case of a TLS secured communica-
2842 tion, the integrity and confidentiality of the transmitted data is protected by the TLS pro-
2843 tocol according to [RFC 5246]. In case of a unidirectional communication at
2844 IF_GW_MTR/wireless, the integrity is verified by the verification of the CMAC check sum
2845 whereas the protection of the confidentiality is given by the use of AES in CBC mode
2846 with 128 bit key length in combination with the CMAC authentication (**FCS_CKM.1/MTR**,
2847 **FCS_COP.1/MTR**). The AES encryption key has been brought into the TOE via a man-
2848 agement function during the pairing process for the Meter. In the TOE's internal data
2849 model, the used cryptographic keys K_{mac} and K_{enc} are associated with the meter-id due
2850 to the fact of the unidirectional communication. The TOE contains a packet monitor for
2851 Meter Data to avoid replay attacks based on the re-sending of Meter Data packages. In
2852 case of recognized data packets which have already been received and processed by
2853 the TOE, these data packets are blocked by the packet monitor (**FPT_RPL.1**).

2854 Concerning the service layers, the TOE detects replay attacks that can occur during
2855 authentication processes against the TOE or for example receiving data from one of the
2856 involved communication networks. This is for instance achieved through the correct in-
2857 terpretation of the strictly increasing ordering numbers for messages from the meters (in
2858 case that a TLS-secured communication channel is not used), through the enforcement
2859 of an appropriate time slot of execution for successfully authenticated wake-up calls, and
2860 of course through the use of the internal means of the TLS protocol according to
2861 [RFC 5246] (**FPT_RPL.1**).

2862 The deposition of Meter Data is performed in a way that these Meter Data are associated
2863 with a permission profile. This means that all of the operations and actions that can be
2864 taken with these data as described afterwards (e.g. sending via WAN to an Authenti-
2865 cated External Entity) depend on the permissions which are associated with the

2866 Meter Data. For metrological purposes, the Meter Data's security attribute - if applicable
2867 - will be persisted associated with its corresponding Meter Data by the TOE. All user
2868 associated data stored by the TOE are protected by an AES-128-CMAC value. Before
2869 accessing these data, the TOE verifies the CMAC value that has been applied to the
2870 user data and detects integrity errors on any data and especially on user associated
2871 Meter Data in a reliable manner (**FDP_SDI.2**).

2872 Closely linked with the deposition of the Meter Data is the assignment of an unambigu-
2873 ous and reliable timestamp on these data. The reliability grounds on the regular use of
2874 an external time source offering a sufficient exactness (**FPT_STM.1**) which is used to
2875 synchronize the operating system of the TOE. A maximum deviation of 3% of the meas-
2876 uring period is allowed to be in conformance with [PP_GW]. The data set (Meter Data
2877 and tariff data) is associated with the timestamp in an inseparably manner because each
2878 Meter Data entry in the database includes the corresponding time stamp and the data-
2879 base is cryptographically protected through the encrypted file system. For details about
2880 database encryption please see page 150).

2881 For transmission of consumption data (tariffed Meter Data) or status data into the WAN,
2882 the TOE ensures that the data are encrypted and digitally signed (**FCO_NRO.2**,
2883 **FCS_CKM.1/CMS**, **FCS_COP.1/CMS**, **FCS_COP.1/HASH**, **FCS_COP.1/MEM**). In case
2884 of a successful transmission of consumption data into the WAN, beside the transmitted
2885 data the data's signature applied by the TOE is logged in the Consumer-Log for the
2886 respective Consumer at IF_GW_CON thus providing the possibility not only for the re-
2887 cipient to verify the evidence of origin for the transmitted data but to the Consumer at
2888 IF_GW_CON, too (**FCO_NRO.2**). The encryption is performed with the hybrid encryption
2889 as specified in [TR-03109-1-I] in combination with [TR-03116-3]. The public key of the
2890 external entity, the data have to be encrypted for, is known by the TOE through the
2891 authentication data configured by the Gateway Administrator and its assigned identity.
2892 This public key is assumed by the TOE to be valid because the TOE does not verify the
2893 revocation status of certificates. The public key used for the encryption of the derived
2894 symmetric key used for transmission of consumption data is different from the public key
2895 in the TLS certificate of the external entity used for the TLS secured communication
2896 channel. The derivation of the hybrid key used for transmission of consumption data is
2897 done according to [TR-03116-3, chapter 8].

2898 The TOE does also foresee the case that the data is encrypted for an external entity that
2899 is not directly assigned to the external entity holding the active communication channel.
2900 The electronic signature is created through the utilization of the Security Module whereas

2901 the TOE is responsible for the computation of the hash value for the data to be signed.
2902 Therefore, the TOE utilizes the SHA-256 or SHA-384 hash algorithm. The SHA-512 hash
2903 algorithm is available in the TOE but not yet used (**FCS_COP.1/HASH**). The data to be
2904 sent to the external entity are prepared on basis of the tariffed meter data. The data to
2905 be transmitted are removed through deallocation of the resources after the (successful
2906 or unsuccessful) transmission attempt so that afterwards no previous information will be
2907 available (**FDP_RIP.2**). The created temporary session keys which have been used for
2908 encryption of the data are also deleted by the already described zeroisation mechanism
2909 as soon they are no longer needed (**FCS_CKM.4**).

2910 The time interval for transmission of the data is set for a daily transmission, and can be
2911 additionally configured by the Gateway Administrator. The TOE sends randomly gener-
2912 ated messages into the WAN, so that through this the analysis of frequency, load, size
2913 or the absence of external communication is concealed (**FPR_CON.1**). Data that are not
2914 relevant for accounting are aliased for transmission so that no personally identifiable
2915 information (PII) can be obtained by an analysis of not billing-relevant information sent
2916 to parties in the WAN. Therefore, the TOE utilizes the alias as defined by the Gateway
2917 Administrator in the Processing Profile for the Meter identity to external parties in the
2918 WAN. Thereby, the TOE determines the alias for a user and verifies that it conforms to
2919 the alias given in the Processing Profile (**FPR_PSE.1**).

2920

2921 **7.3SF.3: Administration, Configuration and SW Update**

2922 The TOE includes functionality that allows its administration and configuration as well as
2923 updating the TOE's complete firmware ("firmware updates") or only the software appli-
2924 cation including the service layer ("software updates"). This functionality is only provided
2925 for the authenticated Gateway Administrator (**FMT_MOF.1**, **FMT_MSA.1/AC**,
2926 **FMT_MSA.1/FW**, **FMT_MSA.1/MTR**).

2927 The following operations can be performed by the successfully authenticated Gateway
2928 Administrator:

- 2929 a) Definition and deployment of Processing Profiles including user administration,
2930 rights management and setting configuration parameters of the TOE
- 2931 b) Deployment of tariff information
- 2932 c) Deployment and installation of software/firmware updates

2933 A complete overview of the possible management functions is given in Table 14 and
2934 Table 15 (**FMT_SMF.1**). Beside the possibility for a successfully authenticated Service
2935 Technician to view the system log via interface IF_GW_SRV, administrative or configu-
2936 ration measures on the TOE can only be taken by the successfully authenticated Gate-
2937 way Administrator.

2938 In order to perform these measures, the TOE has to establish a TLS secured channel
2939 to the Gateway Administrator and must authenticate the Gateway Administrator suc-
2940 cessfully. There are two possibilities:

- 2941 a) The TOE independently contacts the Gateway Administrator at a certain time
2942 specified in advance by the Gateway Administrator.
- 2943 b) Through a message sent to the wake-up service, the TOE is requested to con-
2944 tact the Gateway Administrator.

2945 In the second case, the wake-up data packet is received by the TOE from the WAN and
2946 checked by the TOE for structural correctness according to [TR-03109-1]. Afterwards,
2947 the TOE verifies the correctness of the electronic signature applied to the wake-up mes-
2948 sage data packet using the certificate of the Gateway Administrator stored in the TSF
2949 data. Afterwards, a TLS connection to the Gateway Administrator is established by the
2950 TOE and the above mentioned operations can be performed.

2951 Software/firmware updates always have to be signed by the TOE manufacturer.

2952 Software/firmware updates can be of different content:

- 2953 a) The whole boot image of the TOE is changed.
- 2954 b) Only individual components of the TOE are changed. These components can
2955 be the boot loader plus the static kernel or the SMGW application.

2956 The update packet is realized in form of an archive file enveloped into a CMS signature
2957 container according to [RFC 5652]. The electronic signature of the update packet is cre-
2958 ated using signature keys from the TOE manufacturer. The verification of this signature
2959 is performed by the TOE using the TOE's Security Module using the trust anchor of the
2960 TOE manufacturer. If the signature of the transferred data could not be successfully
2961 verified by the TOE or if the version number of the new firmware is not higher than the
2962 version number of the installed firmware, the received data is rejected by the TOE and
2963 not used for further processing. Any administrator action is entered in the System Log of
2964 the TOE. Additionally, an authorised Consumer can interact with the TOE via the

2965 interface IF_GW_CON to get the version number and the current time displayed
2966 (**FMT_MOF.1**).

2967 The signature of the update packet is immediately verified after receipt. After successful
2968 verification of the update packet the update process is immediately performed. In each
2969 case, the Gateway Administrator gets notified by the TOE and an entry in the TOE's
2970 system log will be written.

2971 All parameters that can be changed by the Gateway Administrator are preset with re-
2972 strictive values by the TOE. No role can specify alternative initial values to override these
2973 restrictive default values (**FMT_MSA.3/AC**, **FMT_MSA.3/FW**, **FMT_MSA.3/MTR**).

2974 This mechanism is supported by the TOE-internal resource monitor that internally mon-
2975 itors existing connections, assigned roles and operations allowed at a specific time.

2976

2977 **7.4 SF.4: Displaying Consumption Data**

2978 The TOE offers the possibility of displaying consumption data to authenticated Consum-
2979 ers at interface IF_GW_CON. Therefore, the TOE contains a web server that implements
2980 TLS-based communication with mutual authentication (**FTP_ITC.1/USR**). If the Con-
2981 sumer requests a password-based authentication from the GWA according to [TR-
2982 03109-1] and the GWA activates this authentication method for this Consumer, the TOE
2983 uses TLS authentication with server-side authentication and HTTP digest access au-
2984 thentication according to [RFC 7616]. In both cases, the requirement **FCO_NRO.2** is
2985 fulfilled through the use of TLS-based communication and through encryption and digital
2986 signature of the (tariffed) Meter Data to be displayed using **FCS_COP.1/HASH**.

2987 To additionally display consumption data, a connection at interface IF_GW_CON must
2988 be established and the role "(authorised) Consumer" is assigned to the user with his
2989 used display unit by the TOE. Different Consumer can use different display units. The
2990 amount of allowed connection attempts at IF_GW_CON is set to 5. In case the amount
2991 of allowed connection attempts is reached, the TOE blocks IF_GW_CON (**FIA_AFL.1**).
2992 The display unit has to technically support the applied authentication mechanism and
2993 the HTTP protocol version 1.1 according to [RFC 2616] as communication protocol. Data
2994 is provided as HTML data stream and transferred to the display unit. In this case, further
2995 processing of the transmitted data stream is carried out by the display unit.

2996 According to [TR-03109-1], the TOE exclusively transfers Consumer specific consump-
2997 tion data to the display unit. The Consumer can be identified in a clear and unambiguous

2998 manner due to the applied authentication mechanism. Moreover, the TOE ensures that
2999 exclusively the data actually assigned to the Consumer is provided at the display unit
3000 via IF_GW_CON (**FIA_USB.1**).

3001

3002 **7.5 SF.5: Audit and Logging**

3003 The TOE generates audit data for all actions assigned in the System-Log
3004 (**FAU_GEN.1/SYS**), the Consumer-Log (**FAU_GEN.1/CON**), and the Calibration-Log
3005 (**FAU_GEN.1/CAL**) as well. On the one hand, this applies to the values measured by
3006 the Meter (Consumer-Log) and on the other hand to system data (System-Log) used by
3007 the Gateway Administrator of the TOE in order to check the TOE's current functional
3008 status. In addition, metrological entries are created in the Calibration-Log. The TOE thus
3009 distinguishes between the following log classes:

- 3010 a) System-Log
- 3011 b) Consumer-Log
- 3012 c) Calibration-Log

3013 The TOE audits and logs all security functions that are used. Thereby, the TOE compo-
3014 nent accomplishing this security audit functionality includes the necessary rules moni-
3015 toring these audited events and through this indicating a potential violation of the en-
3016 forcement of the TOE security functionality (e. g. in case of an integrity violation, replay
3017 attack or an authentication failure). If such a security breach is detected, it is shown as
3018 such in the log entry (**FAU_SAA.1/SYS**).

3019 The System-Log can only be read by the authorized Gateway Administrator via interface
3020 IF_GW_WAN or by an authorized Service Technician via interface IF_GW_SRV
3021 (**FAU_SAR.1/SYS**). Potential security breaches are separately indicated and identified
3022 as such in the System-Log and the GWA gets informed about this potential security
3023 breach (**FAU_ARP.1/SYS**, **FDP_SDI.2**). Data of the Consumer-Log can exclusively be
3024 viewed by authenticated Consumers via interface IF_GW_CON designed to display con-
3025 sumption data (**FAU_SAR.1/CON**). The data included in the Calibration-Log can only be
3026 read by the authenticated Gateway Administrator via interface IF_GW_WAN
3027 (**FAU_SAR.1/CAL**).

3028 If possible, each log entry is assigned to an identity that is known to the TOE. For audit
3029 events resulting from actions of identified users resp. roles, the TOE associates the

3030 generated log information to the identified users while generating the audit information
3031 (**FAU_GEN.2**).

3032 Generated audit and log data are stored in a cryptographically secured storage. For this
3033 purpose, a file-based SQL database system is used securing its' data using an AES-
3034 XTS-128 encrypted file system (AES in XTS mode with 128-bit keys) according to
3035 [FIPS Pub. 197] and [NIST 800-38E]. This is achieved by using device-specific AES
3036 keys so that the secure environment can only be accessed with the associated symmet-
3037 ric key available. Using an appropriately limited access of this symmetric, the TOE im-
3038 plements the necessary rules so that it can be ensured that unauthorised modification
3039 or deletion is prohibited (**FAU_STG.2**).

3040 Audit and log data are stored in separate locations: One location is used to store Con-
3041 sumer-specific log data (Consumer-Log) whereas device status data and metrological
3042 data are stored in a separate location: status data are stored in the System-Log and
3043 metrological data are stored in the Calibration-Log. Each of these logs is located in phys-
3044 ically separate databases secured by different cryptographic keys. In case of several
3045 external meters, a separate database is created for each Meter to store the respective
3046 consumption and log data (**FAU_GEN.2**).

3047 If the audit trail of the System-Log or the Consumer-Log is full (so that no further data
3048 can be added), the oldest entries in the audit trail are overwritten (**FAU_STG.2**,
3049 **FAU_STG.4/SYS**, **FAU_STG.4/CON**). If the Consumer-Log's oldest audit record must
3050 be kept because the period of billing verification (of usually 15 months) has not been
3051 reached, the TOE's metrological activity is paused until the oldest audit record gets
3052 deletable. Thereafter, the TOE's metrological activity is started again through an internal
3053 timer. Moreover, the mechanism for storing log entries is designed in a way that these
3054 entries are cryptographically protected against unauthorized deletion. This is especially
3055 achieved by assigning cryptographic keys to each of the individual databases for the
3056 System-Log, Consumer-Log and Calibration-Log.

3057 If the Calibration-Log cannot store any further data, the operation of the TOE is stopped
3058 through the termination of its metering services and the TOE informs the Gateway Ad-
3059 ministrator by creating an entry in the System-Log, so that additional measures can be
3060 taken by the Gateway Administrator. Calibration-Log entries are never overwritten by
3061 the TOE (**FAU_STG.2**, **FAU_STG.4/CAL**, **FMT_MOF.1**).

3062 The TOE anonymizes the data in a way that no conclusions about a specific person or
3063 user can be drawn from the log or recorded not billing relevant data. Stored consumption

3064 data are exclusively intended for accounting with the energy supplier. The data stored
3065 in the System-Log are used for analysis purposes concerning necessary technical anal-
3066 yses and possible security-related information.

3067 **7.6 SF.6: TOE Integrity Protection**

3068 The TOE makes physical tampering detectable through the TOE's sealed packaging of
3069 the device. So if an attacker opens the case, this can be physically noticed, e. g. by the
3070 Service Technician (**FPT_PHP.1**).

3071 The TOE provides a secure boot mechanism. Beginning from the AES-128-encrypted
3072 bootloader protected by a digital signature applied by the TOE manufacturer, each sub-
3073 sequent step during the boot process is based on the previous step establishing a con-
3074 tinuous forward-concatenation of cryptographical verification procedures. Thus, it is en-
3075 sured that each part of the firmware, that means the operating system, the service layers
3076 and the software application in general, is tested by the TOE during initial startup.
3077 Thereby, a test of the TSF data being part of the software application is included. During
3078 this complete self-test, it is checked that the electronic system of the physical device,
3079 and all firmware components of the TOE are in authentic condition. This complete self-
3080 test can also be run at the request of the successfully authenticated Gateway Adminis-
3081 trator via interface IF_GW_WAN or at the request of the successfully authenticated Ser-
3082 vice Technician via interface IF_GW_SRV. At the request of the successfully authenti-
3083 cated Consumer via interface IF_GW_CON, the TOE will only test the integrity of the
3084 Smart Metering software application including the service layers (without the operating
3085 system) and the completeness of the TSF data stored in the TOE's database. Addition-
3086 ally, the TOE itself runs a complete self-test periodically at least once a month during
3087 normal operation. The integrity of TSF data stored in the TOE's database is always
3088 tested during read access of that part of TSF data (**FPT_TST.1**). **FPT_RPL.1** is fulfilled
3089 by the use of the TLS protocol respectively the integration of transmission counters ac-
3090 cording to [TR-03116-3, chap. 7.3], and through the enforcement of an appropriate time
3091 slot of execution for successfully authenticated wake-up calls.

3092 If an integrity violation of the TOE's hardware or firmware is detected or if the deviation
3093 between local system time of the TOE and the reliable external time source is too large,
3094 further use of the TOE for the purpose of gathering Meter Data is not possible. Also in
3095 this case, the TOE signals the incorrect status via a suitable signal output on the case

3096 of the device, and the further use of the TOE for the purpose of gathering Meter Data is
 3097 not allowed (**FPT_FLS.1**).

3098 Basically, if an integrity violation is detected, the TOE will create an entry in the System
 3099 Log to document this status for the authorised Gateway Administrator on interface
 3100 IF_GW_WAN resp. for the authorised Service Technician on interface IF_GW_SRV, and
 3101 will inform the Gateway Administrator on this incident (**FAU_ARP.1/SYS,**
 3102 **FAU_GEN.1/SYS, FAU_SAR.1/SYS, FPT_TST.1**).

3103 **7.7 TSS Rationale**

3104 The following table shows the correspondence analysis for the described TOE security
 3105 functionalities and the security functional requirements.

3136 **10 Appendix**3137 **10.1 Mapping from English to German terms**

English term	German term
billing-relevant	abrechnungsrelevant
CLS, Controllable Local System	dezentral steuerbare Verbraucher- oder Erzeugersysteme
Consumer	Anschlussnutzer; Letztverbraucher (im verbrauchenden Sinne); u.U. auch Einspeiser
Consumption Data	Verbrauchsdaten
Gateway	Kommunikationseinheit
Grid	Netz (für Strom/Gas/Wasser)
Grid Status Data	Zustandsdaten des Versorgungsnetzes
LAN, Local Area Network	Lokales Kommunikationsnetz
LMN, Local Metrological Network	Lokales Messeinrichtungsnetz
Meter	Messeinrichtung (Teil eines Messsystems)
Processing Profiles	Konfigurationsprofile
Security Module	Sicherheitsmodul (z.B. eine Smart Card)
Service Provider	Diensteanbieter
Smart Meter, Smart Metering System ²²⁶	Intelligente, in ein Kommunikationsnetz eingebundene, elektronische Messeinrichtung (Messsystem)
TOE	EVG (E valuierungs g egenstand)

²²⁶ Please note that the terms "Smart Meter" and "Smart Metering System" are used synonymously within this document.

WAN, Wide Area Network	Weitverkehrsnetz (für Kommunikation)
------------------------	--------------------------------------

3138

3139 **10.2 Glossary**

Term	Description
Authenticity	property that an entity is what it claims to be (according to [SD_6])
Block Tariff	Tariff in which the charge is based on a series of different energy/volume rates applied to successive usage blocks of given size and supplied during a specified period. (according to [CEN])
BPL	<i>Broadband Over Power Lines</i> , a method of power line communication
CA	Certification Authority, an entity that issues digital certificates. CLS config
CDMA	<i>Code Division Multiple Access</i>
CLS config (secondary asset)	See chapter 3.2
CMS	Cryptographic Message Syntax
Confidentiality	the property that information is not made available or disclosed to unauthorised individuals, entities, or processes (according to [SD_6])
Consumer	End user of electricity, gas, water or heat (according to [CEN]). See chapter 3.1
DCP	<i>Data Co-Processor</i> , security hardware of the CPU
DLMS	Device Language Message Specification
DTBS	Data To Be Signed
EAL	Evaluation Assurance Level

Term	Description
Energy Service Provider	Organisation offering energy related services to the Consumer (according to [CEN])
ETH	Ethernet
external entity	See chapter 3.1
firmware update	See chapter 3.2
Gateway Administrator (GWA)	See chapter 3.1
Gateway config (secondary asset)	See chapter 3.2
Gateway time	See chapter 3.2
G.hn	Gigabit Home Networks
GPRS	<i>General Packet Radio Service</i> , a packet oriented mobile data service
Home Area Network (HAN)	In-house data communication network which interconnects domestic equipment and can be used for energy management purposes (adopted according to [CEN]).
Integrity	property that sensitive data has not been modified or deleted in an unauthorised and undetected manner (according to [SD_6])
IT-System	Computersystem
Local Area Network (LAN)	Data communication network, connecting a limited number of communication devices (Meters and other devices) and covering a moderately sized geographical area within the premises of the consumer. In the context of this ST, the term LAN is used as a hypernym for HAN and LMN (according to [CEN], adopted).

Term	Description
Local attacker	See chapter 3.4
LTE	<i>Long Term Evolution</i> mobile broadband communication standard
Meter config (secondary asset)	See chapter 3.2
Local Metrological Network (LMN)	In-house data communication network which interconnects metrological equipment.
Meter Data	See chapter 3.2
Meter Data Aggregator (MDA)	Entity which offers services to aggregate metering data by grid supply point on a contractual basis. NOTE: The contract is with a supplier. The aggregate is of all that supplier's consumers connected to that particular grid supply point. The aggregate may include both metered data and data estimated by reference to standard load profiles (adopted from [CEN])
Meter Data Collector (MDC)	Entity which offers services on a contractual basis to collect metering data related to a supply and provide it in an agreed format to a data aggregator (that can also be the DNO). NOTE: The contract is with a supplier or a pool. The collection may be carried out by manual or automatic means. ([CEN])
Meter Data Management System (MDMS)	System for validating, storing, processing and analysing large quantities of Meter Data. ([CEN])
Metrological Area Network	In-house data communication network which interconnects metrological equipment (i.e. Meters)
OEM	Original Equipment Manufacturer
OMS	Open Metering System

Term	Description
OCOTP	On-Chip One-time-programmable
Personally Identifiable Information (PII)	Personally Identifiable Information refers to information that can be used to uniquely identify, contact, or locate a single person or can be used with other sources to uniquely identify a single individual.
RJ45	registered jack #45; a standardized physical network interface
RMII	Reduced Media Independent Interface
RTC	Real Time Clock
Service Technician	Human entity being responsible for diagnostic purposes.
Smart Metering System	The Smart Metering System consists of a Smart Meter Gateway and connected to one or more meters. In addition, CLS (i.e. generation plants) may be connected with the gateway for dedicated communication purposes.
SML	Smart Message Language
Tariff	Price structure (normally comprising a set of one or more rates of charge) applied to the consumption or production of a product or service provided to a Consumer (according to [CEN]).
TCP/IP	Transmission Control Protocol / Internet Protocol
TLS	Transport Layer Security protocol according to [RFC 5246]
TOE	Target of Evaluation - set of software, firmware and/or hardware possibly accompanied by guidance
TSF	TOE security functionality
UART	Universal Asynchronous Receiver Transmitter

Term	Description
WAN attacker	See chapter 3.4
WLAN	Wireless Local Area Network
