

# COMMON CRITERIA CERTIFICATION REPORT

API Technologies™ Netgard™ MFD v1.8

383-4-428

1 September 2017

v1.0

# FOREWORD

This certification report is an UNCLASSIFIED publication, issued under the authority of the Chief, Communications Security Establishment (CSE). Suggestions for amendments should be forwarded through departmental communications security channels to your Client Services Representative at CSE.

The Information Technology (IT) product identified in this certification report, and its associated certificate, has been evaluated at an approved evaluation facility – established under the Canadian Common Criteria Scheme – using the Common Methodology for Information Technology Security Evaluation, Version 3.1 Revision 5, for conformance to the Common Criteria for Information Technology Security Evaluation, Version 3.1 Revision 5. This certification report, and its associated certificate, applies only to the identified version and release of the product in its evaluated configuration. The evaluation has been conducted in accordance with the provisions of the Canadian CC Scheme, and the conclusions of the evaluation facility in the evaluation report are consistent with the evidence adduced. This report, and its associated certificate, are not an endorsement of the IT product by the Communications Security Establishment, or any other organization that recognizes or gives effect to this report, and its associated certificate, and no warranty for the IT product by the Communications Security Establishment, or any other organization that recognizes or gives effect to this report, and its associated certificate, is either expressed or implied.

If your department has identified a requirement for this certification report based on business needs and would like more detailed information, please contact:

ITS Client Services

Telephone: (613) 991-7654

E-mail: [itsclientservices@cse-cst.gc.ca](mailto:itsclientservices@cse-cst.gc.ca)

## OVERVIEW

The Canadian Common Criteria Scheme provides a third-party evaluation service for determining the trustworthiness of Information Technology (IT) security products. Evaluations are performed by a commercial Common Criteria Evaluation Facility (CCEF) under the oversight of the Certification Body, which is managed by the Communications Security Establishment.

A CCEF is a commercial facility that has been approved by the Certification Body to perform Common Criteria evaluations; a significant requirement for such approval is accreditation to the requirements of ISO/IEC 17025:2005, the General Requirements for the Competence of Testing and Calibration Laboratories. Accreditation is performed under the Program for the Accreditation of Laboratories - Canada (PALCAN), administered by the Standards Council of Canada.

The CCEF that carried out this evaluation is EWA-Canada.

By awarding a Common Criteria certificate, the Certification Body asserts that the product complies with the security requirements specified in the associated security target. A security target is a requirements specification document that defines the scope of the evaluation activities. The consumer of certified IT products should review the security target, in addition to this certification report, in order to gain an understanding of any assumptions made during the evaluation, the IT product's intended environment, the evaluated security functionality, and the testing and analysis conducted by the CCEF.

The certification report, certificate of product evaluation and security target are posted to the Certified Products list (CPL) for the Canadian CC Scheme and to the Common Criteria portal (the official website of the International Common Criteria Project).

# TABLE OF CONTENTS

<b>Executive Summary</b> .....	<b>5</b>
<b>1 Identification of Target of Evaluation</b> .....	<b>6</b>
1.1 Common Criteria Conformance.....	6
1.2 TOE description .....	6
1.3 TOE architecture.....	6
<b>2 Security policy</b> .....	<b>7</b>
2.1 Cryptographic functionality.....	7
<b>3 Assumptions and Clarifications of Scope</b> .....	<b>8</b>
3.1 Usage and Environmental assumptions .....	8
<b>4 Evaluated Configuration</b> .....	<b>9</b>
4.1 Documentation.....	9
<b>5 Evaluation Analysis Activities</b> .....	<b>10</b>
5.1 Development .....	10
5.2 Guidance Documents .....	10
5.3 Life-cycle Support .....	10
<b>6 Testing Activities</b> .....	<b>11</b>
6.1 Assessment of Developer Tests.....	11
6.2 Conduct of Testing.....	11
6.3 Independent Functional Testing.....	11
6.4 Independent Penetration Testing .....	12
<b>7 Results of the Evaluation</b> .....	<b>13</b>
7.1 Recommendations/Comments.....	13

## EXECUTIVE SUMMARY

API Technologies™ Netgard™ MFD v1.8 (hereafter referred to as the Target of Evaluation, or TOE), from API Technologies™, was the subject of this Common Criteria evaluation. A description of the TOE can be found in Section 1.2. The results of this evaluation demonstrate that TOE meets the requirements of the conformance claim listed in Table 1 for the evaluated security functionality.

EWA-Canada is the CCEF that conducted the evaluation. This evaluation was completed on 01 September 2017 and was carried out in accordance with the rules of the Canadian Common Criteria Scheme.

The scope of the evaluation is defined by the security target, which identifies assumptions made during the evaluation, the intended environment for TOE, and the security functional/assurance requirements. Consumers are advised to verify that their operating environment is consistent with that specified in the security target, and to give due consideration to the comments, observations and recommendations in this certification report.

Communications Security Establishment, as the Certification Body, declares that the TOE evaluation meets all the conditions of the Arrangement on the Recognition of Common Criteria Certificates and that the product will be listed on the Canadian Certified Products list (CPL) and the Common Criteria portal (the official website of the International Common Criteria Project).

# 1 IDENTIFICATION OF TARGET OF EVALUATION

The Target of Evaluation (TOE) is identified as follows:

**Table 1 TOE Identification**

<b>TOE Name and Version</b>	API Technologies™ Netgard™ MFD v1.8
<b>Developer</b>	API Technologies™
<b>Conformance Claim</b>	EAL 2+ (ALC_FLR.2)

## 1.1 COMMON CRITERIA CONFORMANCE

The evaluation was conducted using the Common Methodology for Information Technology Security Evaluation, Version 3.1 Revision 5, for conformance to the Common Criteria for Information Technology Security Evaluation, Version 3.1 Revision 5.

## 1.2 TOE DESCRIPTION

The TOE is an inline user authentication device for networked, special purpose devices such as multi-function printer/scanner/copiers. Users of the multi-function device are required to authenticate themselves with a smartcard (Common Access Card (CAC)/Personal Identity Verification (PIV) card) and personal identification number (PIN) prior to accessing or distributing privileged materials.

Prior to authentication, users are not permitted to print, scan, or send from the multi-function device to network resources. The TOE is designed to work with multi-function devices that do not natively support CAC/PIV access.

## 1.3 TOE ARCHITECTURE

A diagram of the TOE architecture is as follows:

**Figure 1 TOE Architecture**

## 2 SECURITY POLICY

The TOE implements policies pertaining to the following security functional classes:

- Security Audit
- Cryptographic Support
- User Data Protection
- Identification and Authentication
- Security Management
- Protection of the TSF
- TOE Access
- Trusted Path/Channel

Complete details of the security functional requirements (SFRs) can be found in the Security Target (ST) referenced in section 8.2.

### 2.1 CRYPTOGRAPHIC FUNCTIONALITY

The following cryptographic module was evaluated by the CMVP and implemented in the TOE:

**Table 2 Cryptographic Module(s)**

Cryptographic Module	Certificate Number
Common Crypto Module for PRIISMS, PRIISMS RD, SA5600-IA and NetGard MFD (Software Version: 1.0)	#2070

## 3 ASSUMPTIONS AND CLARIFICATIONS OF SCOPE

Consumers of the TOE should consider assumptions about usage and environmental settings as requirements for the product's installation and its operating environment. This will ensure the proper and secure operation of the TOE.

### 3.1 USAGE AND ENVIRONMENTAL ASSUMPTIONS

The following assumptions are made regarding the use and deployment of the TOE:

- The TOE is connected to the network in such a way that it is able to access all of the network resources required to support authentication, access to email and access to the user's home directory.
- The TOE will be located within controlled access facilities, which will prevent unauthorized physical access. The TOE must be in close proximity to the MFD.
- There are one or more competent individuals assigned to manage the TOE.
- The authorized administrators are not careless, wilfully negligent, or hostile, are appropriately trained and will follow the instructions provided by the TOE documentation.

## 4 EVALUATED CONFIGURATION

The evaluated configuration for the TOE comprises:

- API Technologies™ Netgard™ MFD v1.8.0-1 CL310S;
- API Technologies™ Netgard™ MFD v1.8.0-1-v CL310S2; and
- API Technologies™ Netgard™ MFD v1.8.0-1-HP CL310HP for HP Large Format Printers.

The following support from the operating environment is required:

- ACR Card Reader with PIN pad and metal bracket;
- OMNIKEY 3121 Card Reader;
- Domain Controller;
- Active directory;
- SMTP server;
- NTP server;
- Server Message Block server;
- Kerberos Key Distribution Center;
- Certification Authority; and
- Online Certificate Status Protocol Service.

### 4.1 DOCUMENTATION

The following documents are provided to the consumer to assist in the configuration and installation of the TOE:

- a. Netgard MFD Quick Start Guide, Version 3.1.
- b. Netgard MFD Administrator Guide, Version 1.8.0.
- c. Netgard MFD Scan to Home and Secure Print Release Deployment Guide, Version 6.
- d. Scan to Home for HP T2500 Plotter Deployment Guide, Version 1.6.
- e. Netgard MFD Common Criteria Guidance Supplement, Version 1.0.

## 5 EVALUATION ANALYSIS ACTIVITIES

The evaluation analysis activities involved a structured evaluation of the TOE. Documentation and process dealing with Development, Guidance Documents, and Life-Cycle Support were evaluated.

### 5.1 DEVELOPMENT

The evaluators analyzed the documentation provided by the vendor; they determined that the design completely and accurately describes the TOE security functionality (TSF) interfaces, the TSF subsystems and how the TSF implements the security functional requirements (SFRs). The evaluators determined that the initialization process is secure, that the security functions are protected against tamper and bypass, and that security domains are maintained.

### 5.2 GUIDANCE DOCUMENTS

The evaluators examined the TOE preparative user guidance and operational user guidance and determined that it sufficiently and unambiguously describes how to securely transform the TOE into its evaluated configuration and how to use and administer the product. The evaluators examined and tested the preparative and operational guidance, and determined that they are complete and sufficiently detailed to result in a secure configuration.

Section 4.1 provides details on the guidance documents.

### 5.3 LIFE-CYCLE SUPPORT

An analysis of the TOE configuration management system and associated documentation was performed. The evaluators found that the TOE configuration items were clearly marked.

The evaluators examined the delivery documentation and determined that it described all of the procedures required to maintain the integrity of the TOE during distribution to the consumer.

The evaluators reviewed the flaw remediation procedures used by developer for the TOE. The evaluators concluded that the procedures are adequate to track and correct security flaws, and distribute the flaw information and corrections to consumers of the TOE.

## 6 TESTING ACTIVITIES

Testing consists of the following three steps: assessing developer tests, performing independent functional tests, and performing penetration tests.

### 6.1 ASSESSMENT OF DEVELOPER TESTS

The evaluators verified that the developer has met their testing responsibilities by examining their test evidence, and reviewing their test results, as documented in the ETR. The correspondence between the tests identified in the developer's test documentation and the functional specification was complete.

### 6.2 CONDUCT OF TESTING

The TOE was subjected to a comprehensive suite of formally documented, independent functional and penetration tests. The detailed testing activities, including configurations, procedures, test cases, expected results and observed results are documented in a separate Test Results document.

### 6.3 INDEPENDENT FUNCTIONAL TESTING

During this evaluation, the evaluator developed independent functional tests by examining design and guidance documentation.

All testing was planned and documented to a sufficient level of detail to allow repeatability of the testing procedures and results. The following testing activities were performed:

- a. Repeat of Developer's Tests: The evaluator repeated a subset of the developers tests;
- b. Concurrent logins: The evaluator confirmed that the TOE is able to maintain separation of roles during concurrent connections to the management interface;
- c. Secure Print Release Queue Management: The evaluator confirmed that the secure print release queue will only release a print job to the correct user; and
- d. Secure Print Release on HP PageWide XL 5000: The evaluator confirmed that the Netgard MFD Secure Release functionality works correctly with the CAC card and an HP PageWide XL 5000 peripheral device.

#### 6.3.1 FUNCTIONAL TEST RESULTS

The developer's tests and the independent functional tests yielded the expected results, providing assurance that the TOE behaves as specified in its ST and functional specification.

## 6.4 INDEPENDENT PENETRATION TESTING

---

Subsequent to the independent review of public domain vulnerability databases and all evaluation deliverables, limited independent evaluator penetration testing was conducted. The penetration tests focused on:

- a. Use of automated vulnerability scanning tools to discover potential network, platform and application layer vulnerabilities such as Heartbleed, Shellshock, FREAK, POODLE, and GHOST; and
- b. Login Credential Protection: Using Wireshark, the evaluator attempted to capture login credentials.

### 6.4.1 PENETRATION TEST RESULTS

The independent penetration testing did not uncover any exploitable vulnerabilities in the intended operating environment.

## 7 RESULTS OF THE EVALUATION

This evaluation has provided the basis for the conformance claim documented in Table 1. The overall verdict for this evaluation is **PASS**. These results are supported by evidence in the ETR.

The IT product identified in this report has been evaluated at an approved evaluation facility established under the Canadian Common Criteria Scheme using the Common Methodology for IT Security Evaluation, Version 3.1 Revision 5, for conformance to the Common Criteria for IT Security Evaluation, Version 3.1 Revision 5. These evaluation results apply only to the specific version and release of the product in its evaluated configuration and in conjunction with the complete certification report.

The evaluation has been conducted in accordance with the provisions of the Canadian Common Criteria Scheme and the conclusions of the evaluation facility in the evaluation report are consistent with the evidence adduced. This is not an endorsement of the IT product by CSE or by any other organization that recognizes or gives effect to this certificate, and no warranty of the IT product by CSE or by any other organization that recognizes or gives effect to this certificate, is expressed or implied.

### 7.1 RECOMMENDATIONS/COMMENTS

It is recommended that all guidance outlined in Section 4.1 be followed to configure the TOE in the evaluated configuration.

## 8 SUPPORTING CONTENT

### 8.1 LIST OF ABBREVIATIONS

Term	Definition
CAVP	Cryptographic Algorithm Validation Program
CCEF	Common Criteria Evaluation Facility
CM	Configuration Management
CMVP	Cryptographic Module Validation Program
CSE	Communications Security Establishment
EAL	Evaluation Assurance Level
ETR	Evaluation Technical Report
GC	Government of Canada
IT	Information Technology
ITS	Information Technology Security
ITSET	Information Technology Security Evaluation and Testing
MFD	Multi-function Device
PALCAN	Program for the Accreditation of Laboratories – Canada
PP	Protection Profile
SFR	Security Functional Requirement
ST	Security Target
TOE	Target of Evaluation
TSF	TOE Security Function
