Canadian Common Criteria Evaluation and Certification Scheme

Document number: 383-7-82-MR
Version: 1.0
Date: 19 October 2012
Pagination: 1 to 2
1 Introduction

Symantec Corporation has submitted, via Apex Assurance Group, the Impact Analysis
Report (IAR) for Symantec Messaging Gateway 10.0 (hereafter referred to as Symantec
Gateway), satisfying the requirements outlined in Assurance Continuity: CCRA
Requirements, v2.0, November 2011. In accordance with those requirements, the IAR
describes the changes implemented in Symantec Gateway, (the maintained Target of
Evaluation), the evidence updated as a result of the changes and the security impact of the
changes.

2 Description of changes in the Maintained Target of Evaluation

The following characterizes the changes implemented in Symantec Gateway. For each
change, it was verified that there were no required changes to the security functional
requirements in the ST, and thorough functional and regression testing was conducted by the
developer to ensure that the assurance in the Target of Evaluation (TOE) was maintained.
The changes in Symantec Gateway comprise features and product enhancements.

3 Description of Changes to the IT Environment

There were no changes to the underlying IT environment.

4 Affected developer evidence

Modifications to the product necessitated changes to a subset of the developer evidence that
was previously submitted for the TOE. The set of affected developer evidence was identified
in the IAR.

Modifications to the security target were made to reflect the new product versions.

5 Conclusions

All changes to the maintained TOE were features and product enhancements. Through
functional and regression testing of Symantec Gateway, assurance gained in the original
TOE certification was maintained. As all of the changes to the maintained TOE have been
classified as minor, it is the conclusion of the CB that the maintained TOE is appropriate for
assurance continuity and re-evaluation is not required.
