

## CCEVS APPROVED ASSURANCE CONTINUITY MAINTENANCE REPORT

### ASSURANCE CONTINUITY MAINTENANCE REPORT FOR

#### U.S. Government Protection Profile for Database Management Systems

**Date of Activity:** 24 December 2010

**Updated Protection Profile:** U.S. Government Protection Profile for Database Management Systems version 1.3 24 December 2010

#### **Assurance Continuity Maintenance Report:**

Changes were made to the validated U.S. Government Protection Profile for Database Management Systems in Basic Robustness Environments Version 1.2. These changes generated the U.S. Government Protection Profile for Database Management Systems Version 1.3. The changes reflected updates to various portions of the protection profile that were necessary to remove references to Basic Robustness and a requirement for a PP compliant Operating System. No Function or Assurance requirements were changed from the previous version. These changes were reviewed by the Common Criteria Evaluation and Validation Scheme (CCEVS) Senior Technical Advisor and found to have Functional and Assurance requirements as the previously evaluated Common Criteria version.

#### **Changes to PP:**

The following areas were changed in the new version of the Protection Profile:

1. Removal references to basic robustness,
2. Removal of the requirement for a PP compliant Operating System.

(Environmental requirements will be satisfied thru scheme supporting documents rather than within particular PPs)
