109 1.1 ST reference

110	Title:	Security Target, SMGW Version 1.3.3
111	Editors:	Power Plus Communications AG
112	CC-Version:	3.1 Revision 5
113	Assurance Level:	EAL 4+, augmented by AVA_VAN.5 and ALC_FLR.2
114	General Status:	Final
115	Document Version:	1.6
116	Document Date:	30.10.2025
117	TOE:	SMGW Version 1.3.3
118	Certification ID:	BSI-DSZ-CC-0831-V8-2023

119 This document contains the security target of the *SMGW Version 1.3.3*.

120 This security target claims conformance to the *Smart Meter Gateway* protection profile
121 [PP_GW].

122

123 1.2 TOE reference

124 The TOE described in this security target is the *SMGW Version 1.3.3*.

125 The following classifications of the product "*Smart Meter Gateway*" contain the TOE:

- 126 • *BPL Smart Meter Gateway* (BPL-SMGW), SMGW-B-1A-111-00 or SMGW-B-
127 1B-111-00
- 128 • *CDMA Smart Meter Gateway* (CDMA-SMGW), SMGW-C-1A-111-00
- 129 • *ETH Smart Meter Gateway* (ETH-SMGW), SMGW-E-1A-111-00 or SMGW-E-
130 1B-111-00
- 131 • *GPRS Smart Meter Gateway* (GPRS-SMGW), SMGW-G-1A-111-30

- 132 • *LTE Smart Meter Gateway (LTE-SMGW)*, SMGW-L-1A-111-30, SMGW-L-1A-
133 111-10, SMGW-L-1B-111-30, SMGW-L-1B-111-10, SMGW-K-1B-111-10,
134 SMGW-K-1B-111-20 or SMGW-K-1B-111-30
- 135 • *powerWAN-ETH Smart Meter Gateway (pWE-SMGW)*, SMGW-P-1B-111-00
- 136 • *G.hn Smart Meter Gateway (G.hn-SMGW)*, SMGW-N-1B-111-00
- 137 • *LTE450 Smart Meter Gateway (LTE450-SMGW)*, SMGW-V-1A-111-20 or
138 SMGW-V-1B-111-20

139 The TOE comprises the following parts:

- 140 • hardware device of the hardware generation 1A or 1B according to Table 1,
141 including the TOE's main circuit board, a carrier board, a power-supply unit and
142 a radio module for communication with wireless meter (included in the hardware
143 device "*Smart Meter Gateway*")
- 144 • firmware including software application (loaded into the circuit board)
 - 145 ○ "*SMGW Software Version 1.3.3*", identified by the value 33950-34900
146 which comprises of two revision numbers of the underlying version control sys-
147 tem for the TOE, where the first part is for the operating system and the second
148 part is for the SMGW application
- 149 • manuals
 - 150 ○ „Handbuch für Verbraucher, Smart Meter Gateway“ [AGD_CON-
151 SUMER], identified by the SHA-256 hash value
152 4816009774a634d207edb00ca6408bb28c26daf2c6c9185ced1f1215088a02e4
 - 153 ○ „Handbuch für Service-Techniker, Smart Meter Gateway“ [AGD_Techni-
154 ker], identified by the SHA-256 hash value
155 1be4058c8db43bcf730387c9f14f0e87bc84db5520815804daaf8f5de1ed6c5a

 - 160 ○ „Logmeldungen, SMGW“ [SMGW_Logging] identified by the SHA-256
161 hash value
162 f3a935b6ae1713ccdaa02411b377377a8e4f7dfb092a181efe1a6c9a86f17a64
 - 163 ○ „Auslieferungs- und Fertigungsprozeduren, Anhang Sichere Ausliefe-
164 rung“ [AGD_SEC], identified by the SHA-256 hash value
165 88ec18e33637440cca7f93456789b33819c3dc4fcd46a2c711e50e235756aa8

166 The hardware device “*Smart Meter Gateway*” includes a secure module with the product
 167 name “*TCOS Smart Meter Security Module Version 1.0 Release 2/P60C144PVE*” which
 168 is not part of the TOE but has its own certification id “BSI-DSZ-CC-0957-V2-2016”. More-
 169 over, a hard-wired communication adapter is connected to the TOE via [USB] as shown
 170 in Figure 3 which is not part of the TOE (but always an inseparable part of the delivered
 171 entity). This communication adapter can be either a LTE communication adapter, a
 172 LTE450 communication adapter, a BPL [IEEE 1901] communication adapter, a GPRS
 173 communication adapter, a CDMA communication adapter, a powerWAN-Ethernet com-
 174 munication adapter, a G.hn [ITU G.hn] communication adapter or an ethernet commu-
 175 nication adapter. There might be not every communication adapter available for each
 176 Hardware Generation.

177 The following table shows the different “*Smart Meter Gateway*” product classifications
 178 applied on the case of the product, while not all of them might be part of the TOE:

#	Characteristic	Value	Description
1	Product family	SMGW	each classification of a type start with this value
2		-	<i>Delimiter</i>
3	Communication Technology	B	Product Type „BPL Smart Meter Gateway“
		H	Product Type “BPL Smart Meter Gateway”
		C	Product Type „CDMA Smart Meter Gateway“
		E	Product Type „ETH Smart Meter Gateway“
		G	Product Type „GPRS Smart Meter Gateway“
		L	Product Type „LTE Smart Meter Gateway“
		J	Product Type “LTE Smart Meter Gateway”
		K	Product Type „LTE Smart Meter Gateway“
		D	Product Type „LTE Smart Meter Gateway“
		O	Product Type „LTE Smart Meter Gateway“

#	Characteristic	Value	Description
		P	Product Type „powerWAN-ETH Smart Meter Gateway“
		N	Product Type „G.hn Smart Meter Gateway“
		V	Product Type “LTE450 Smart Meter Gateway”
4		-	<i>Delimiter</i>
5	Hardware generation	1A	Identification of hardware generation; version 1.0 of “SMGW Hardware”
		1B	Identification of hardware generation; version 1.0.1 of “SMGW Hardware” (with new power adapter)
		2A	Identification of hardware generation; version 2.0 of “SMGW Hardware”
		2B	Identification of hardware generation; version 2B of “SMGW Hardware”
6		-	<i>Delimiter</i>

179 **Table 1: Smart Meter Gateway product classifications**

180 **1.3 Introduction**

181 The increasing use of *green energy* and upcoming technologies around e-mobility lead
 182 to an increasing demand for functions of a so called smart grid. A smart grid hereby
 183 refers to a commodity¹ network that intelligently integrates the behaviour and actions of
 184 all entities connected to it – suppliers of natural resources and energy, its consumers
 185 and those that are both – in order to efficiently ensure a more sustainable, economic and
 186 secure supply of a certain commodity (definition adopted from [CEN]).

187 In its vision such a smart grid would allow to invoke consumer devices to regulate the
 188 load and availability of resources or energy in the grid, e.g. by using consumer devices
 189 to store energy or by triggering the use of energy based upon the current load of the
 190 grid². Basic features of such a smart use of energy or resources are already reality.
 191 Providers of electricity in Germany, for example, have to offer at least one tariff that has
 192 the purpose to motivate the consumer to save energy.

193 In the past, the production of electricity followed the demand/consumption of the con-
 194 sumers. Considering the strong increase in renewable energy and the production of en-
 195 ergy as a side effect in heat generation today, the consumption/demand has to follow
 196 the – often externally controlled – production of energy. Similar mechanisms can exist
 197 for the gas network to control the feed of biogas or hydrogen based on information sub-
 198 mitted by consumer devices.

199 An essential aspect for all considerations of a smart grid is the so called *Smart Metering*
 200 *System* that meters the consumption or production of certain commodities at the

1 Commodities can be electricity, gas, water or heat which is distributed from its generator to the consumer through a grid (network).
 2 Please note that such a functionality requires a consent or a contract between the supplier and the consumer, alternatively a regulatory requirement.

201 consumers' side and allows sending the information about the consumption or produc-
202 tion to external entities, which is then the basis for e. g. billing the consumption or pro-
203 duction.

204 This Security Target defines the security objectives, corresponding requirements and
205 their fulfilment for a Gateway which is the central communication component of such a
206 Smart Metering System (please refer to chapter 1.4.2 for a more detailed overview).

207 The Target of Evaluation (TOE) that is described in this document is an electronic unit
208 comprising hardware and software/firmware³ used for collection, storage and provision
209 of Meter Data⁴ from one or more Meters of one or multiple commodities.

210 The Gateway connects a Wide Area Network (WAN) with a Network of Devices of one
211 or more Smart Metering devices (Local Metrological Network, LMN) and the consumer
212 Home Area Network (HAN), which hosts Controllable Local Systems (CLS) and visuali-
213 zation devices. The security functionality of the TOE comprises

- 214 • protection of confidentiality, authenticity, integrity of data and
- 215 • information flow control

216 mainly to protect the privacy of consumers, to ensure a reliable billing process and to
217 protect the Smart Metering System and a corresponding large scale infrastructure of the
218 smart grid. The availability of the Gateway is not addressed by this ST.

219

220 **1.4 TOE Overview**

221 **1.4.1 Introduction**

222 The TOE as defined in this Security Target is the Gateway in a Smart Metering System.
223 In the following subsections the overall Smart Metering System will be described first
224 and afterwards the Gateway itself.

225 There are various different vocabularies existing in the area of Smart Grid, Smart Meter-
226 ing and Home Automation. Furthermore, the Common Criteria maintain their own vo-
227 cabulary. The Protection Profile [PP_GW, chapter 1.3] provides an overview over the

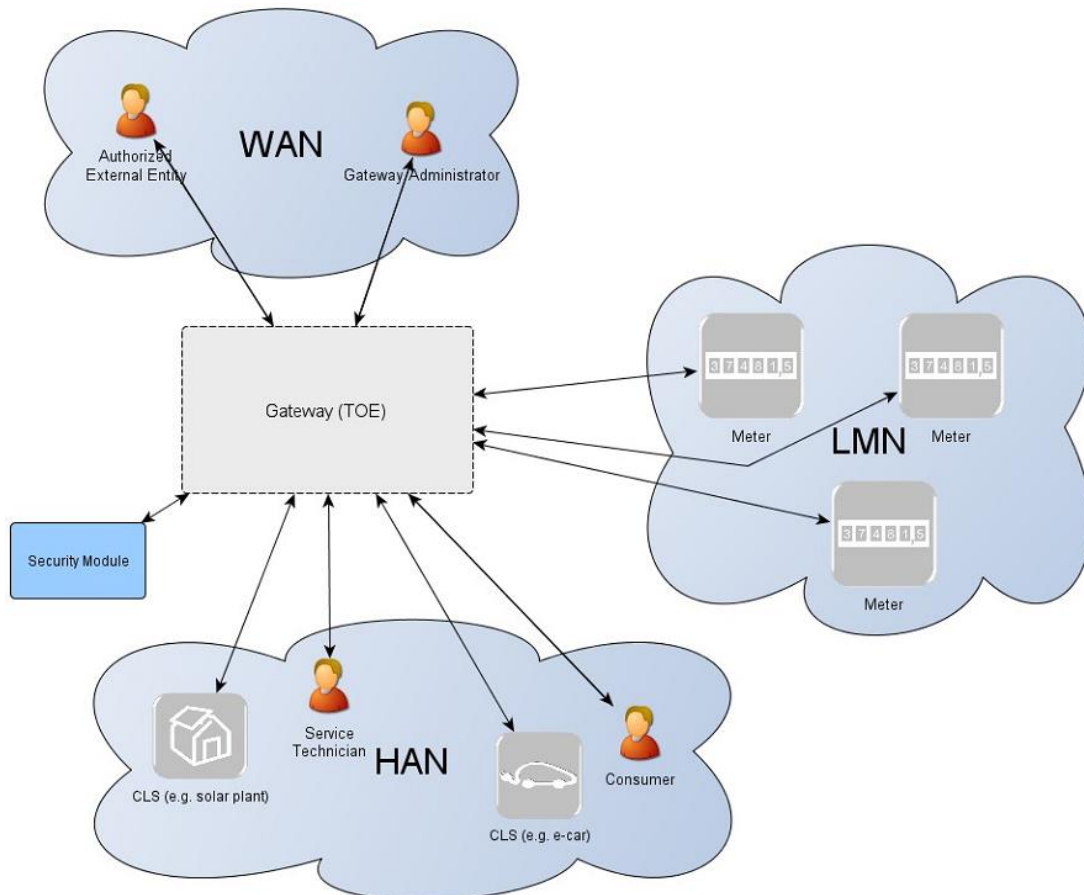

3 For the rest of this document the term "firmware" will be used if the complete firmware ist meant. For the application in-
cluding its services the term "software" will be used.

4 Please refer to chapter 3.2 for an exact definition of the term "Meter Data".

228 most prominent terms used in this Security Target to avoid any bias which is not fully
229 repeated here.

230 1.4.2 Overview of the Gateway in a Smart Metering System

231 The following figure provides an overview of the TOE as part of a complete Smart Me-
232 tering System from a purely functional perspective as used in this ST.⁵

233
234 **Figure 1: The TOE and its direct environment**

235
236 As can be seen in Figure 1, a system for smart metering comprises different functional
237 units in the context of the descriptions in this ST:

- 238 • The **Gateway** (as defined in this ST) serves as the communication component
239 between the components in the local area network (LAN) of the consumer and

⁵ It should be noted that this description purely contains aspects that are relevant to motivate and understand the functionalities of the Gateway as described in this ST. It does not aim to provide a universal description of a Smart Metering System for all application cases.

240 the outside world. It can be seen as a special kind of firewall dedicated to the
241 smart metering functionality. It also collects, processes and stores the records
242 from Meter(s) and ensures that only authorised parties have access to them or
243 derivatives thereof. Before sending meter data⁶ the information will be en-
244 crypted and signed using the services of a Security Module. The Gateway fea-
245 tures a mandatory user interface, enabling authorised consumers to access the
246 data relevant to them.

- 247 • The **Meter** itself records the consumption or production of one or more com-
248 modities (e.g. electricity, gas, water, heat) and submits those records in defined
249 intervals to the Gateway. The Meter Data has to be signed and encrypted be-
250 fore transfer in order to ensure its confidentiality, authenticity, and integrity. The
251 Meter is comparable to a classical meter⁷ and has comparable security require-
252 ments; it will be sealed as classical meters according to the regulations of the
253 calibration authority. The Meter further supports the encryption and integrity
254 protection of its connection to the Gateway⁸.
- 255 • The Gateway utilises the services of a **Security Module** (e.g. a smart card) as
256 a cryptographic service provider and as a secure storage for confidential assets.
257 The Security Module will be evaluated separately according to the requirements
258 in the corresponding Protection Profile (c.f. [SecModPP]).

259 **Controllable Local Systems** (CLS, as shown in Figure 2) may range from local power
260 generation plants, controllable loads such as air condition and intelligent household ap-
261 pliances (“white goods”) to applications in home automation. CLS may utilise the ser-
262 vices of the Gateway for communication services. However, CLS are not part of the
263 Smart Metering System.

264 The following figure introduces the external interfaces of the TOE and shows the cardi-
265 nality of the involved entities. Please note that the arrows of the interfaces within the
266 Smart Metering System as shown in Figure 2 indicate the flow of information. However,
267 it does not indicate that a communication flow can be initiated bi-directionally. Indeed,

6 Please note that readings and data which are not relevant for billing may require an explicit endorsement of the consumer.

7 In this context, a classical meter denotes a meter without a communication channel, i.e. whose values have to be read out locally.

8 It should be noted that this ST does not imply that the connection between the Gateways and external components (specifically meters and CLS) is cable based. It is also possible that the connections as shown in Figure 1 are realised deploying a wireless technology. However, the requirements on how the connections shall be secured apply regardless of the realisation.

268 the following chapters of this ST will place dedicated requirements on the way an infor-
 269 mation flow can be initiated⁹.

270
 271 **Figure 2: The logical interfaces of the TOE**

272 The overview of the Smart Metering System as described before is based on a threat
 273 model that has been developed for the Smart Metering System and has been motivated
 274 by the following considerations:

- 275 • The Gateway is the central communication unit in the Smart Metering System.
 276 It is the only unit directly connected to the WAN, to be the first line of defence
 277 an attacker located in the WAN would have to conquer.
- 278 • The Gateway is the central component that collects, processes and stores Me-
 279 ter Data. It therewith is the primary point for user interaction in the context of
 280 the Smart Metering System.

⁹ Please note that the cardinality of the interface to the consumer is 0..n as it cannot be assumed that a consumer is interacting with the TOE at all.

- 281
- To conquer a Meter in the LMN or CLS in the HAN (that uses the TOE for communication) a WAN attacker first would have to attack the Gateway successfully. All data transferred between LAN and WAN flows via the Gateway which makes it an ideal unit for implementing significant parts of the system's overall security functionality.
- 282
- 283
- 284
- 285
- Because a Gateway can be used to connect and protect multiple Meters (while a Meter will always be connected to exactly one Gateway) and CLS with the WAN, there might be more Meters and CLS in a Smart Metering System than there are Gateways.
- 286
- 287
- 288
- 289

290 All these arguments motivated the approach to have a Gateway (using a Security Module for cryptographic support), which is rich in security functionality, strong and evaluated in depth, in contrast to a Meter which will only deploy a minimum of security functions. The Security Module will be evaluated separately.

291

292

293

294 **1.4.3 TOE description**

295 The Smart Metering Gateway (in the following short: Gateway or TOE) may serve as the communication unit between devices of private and commercial consumers and service providers of a commodity industry (e.g. electricity, gas, water, etc.). It also collects, processes and stores Meter Data and is responsible for the distribution of this data to external entities.

296

297

298

299

300 Typically, the Gateway will be placed in the household or premises of the consumer¹⁰ of the commodity and enables access to local Meter(s) (i.e. the unit(s) used for measuring the consumption or production of electric power, gas, water, heat etc.) and may enable access to Controllable Local Systems (e.g. power generation plants, controllable loads such as air condition and intelligent household appliances).

301

302

303

304

305 The TOE has a fail-safe design that specifically ensures that any malfunction can not impact the delivery of a commodity, e.g. energy, gas or water¹¹.

306

307

¹⁰ Please note that it is possible that the consumer of the commodity is not the owner of the premises where the Gateway will be placed. However, this description acknowledges that there is a certain level of control over the physical access to the Gateway.

¹¹ Indeed, this Security Target assumes that the Gateway and the Meters have no possibility at all to impact the delivery of a commodity. Even an intentional stop of the delivery of a certain commodity is Not within the scope of this Security Target. It should, however, be noted that such a functionality may be realised by a CLS that utilises the services of the TOE for its communication.

308 The following figure provides an overview of the product with its TOE and non-TOE parts:

309

310 **Figure 3: The product with its TOE and non-TOE parts**

311 The TOE communicates over the interface *IF_GW_SM* with a security module and over
 312 the interfaces *USB_P*, *USB_N* and *Module Reset* with one of the possible communica-
 313 tion adapters according to chapter 1.2. The communication adapters, which are not part
 314 of the TOE, transmit data from the USB interface to the WAN interface and vice versa.

315 1.4.4 TOE Type definition

316 At first, the TOE is a communication Gateway. It provides different external communica-
 317 tion interfaces and enables the data communication between these interfaces and con-
 318 nected IT systems. It further collects, processes and stores Meter Data and is responsi-
 319 ble for the distribution of this data to external parties.

320 Typically, the Gateway will be placed in the household or premises of the consumer of
 321 the commodity and enables access to local Meter(s) (i.e. the unit(s) used for measuring
 322 the consumption or production of electric power, gas, water, heat etc.) and may enable
 323 access to Controllable Local Systems (e.g. power generation plants, controllable loads
 324 such as air condition and intelligent household appliances). Roles respectively External
 325 Entities in the context of the TOE are introduced in chapter 3.1.

326 The TOE described in this ST is a product that has been developed by Power Plus Com-
 327 munication AG. It is a communication product which complies with the requirements of
 328 the Protection Profile "Protection Profile for the Gateway of a Smart Metering System"

329 [PP_GW]. The TOE consists of hardware and software including the operating system.
330 The communication with more than one meter is possible.

331 The TOE is implemented as a separate physical module which can be integrated into
332 more complex modular systems. This means that the TOE can be understood as an
333 OEM module which provides all required physical interfaces and protocols on well de-
334 fined interfaces. Because of this, the module can be integrated into communication de-
335 vices and directly into meters.

336 The TOE-design includes the following components:

- 337 • The security relevant components compliant to the Protection Profile.
- 338 • Components with no security relevance (e.g. communication protocols and in-
339 terfaces).

340 The TOE evaluation does not include the evaluation of the Security Module. In fact, the
341 TOE relies on the security functionality of the Security Module but it must be security
342 evaluated in a separate security evaluation¹².

343 The hardware platform of the TOE mainly consists of a suitable embedded CPU, volatile
344 and non-volatile memory and supporting circuits like Security Module and RTC.

345 The TOE contains mechanisms for the integrity protection for its firmware.

346 The TOE supports the following communication protocols:

- 347 • OBIS according to [IEC-62056-6-1] and [EN 13757-1],
- 348 • DLMS/COSEM according to [IEC-62056-6-2],
- 349 • SML according to [IEC-62056-5-3-8],
- 350 • unidirectional and bidirectional wireless M-Bus according to [EN 13757-3],
351 [EN 13757-4], and [IEC-62056-21].

352

¹² Please note that the Security Module is physically integrated into the Gateway even though it is not part of the TOE.

353 The TOE provides the following physical interfaces for communication

- 354
- Wireless M-Bus (LMN) according to [EN 13757-3],
 - 355
 - RS-485 (LMN) according to [EIA RS-485],
 - 356
 - Ethernet (HAN) according to [IEEE 802.3], and
 - 357
 - USB (WAN) according to [USB].

358 The physical interface for the WAN communication is described in chapter 1.4.3. The
359 communication is protected according to [TR-03109].

360 The communication into the HAN is also provided by the Ethernet interface. The proto-
361 cols HTTPS and TLS proxy are therefore supported.

362

363 **Figure 4: The TOE's protocol stack**

364 The TOE provides the following functionality:

- 365
- Protected handling of Meter Data compliant to [PP_GW, chapter 1.4.6.1 and
366 1.4.6.2]
 - 367
 - Integrity and authenticity protection e. g. of Meter Data compliant to [PP_GW,
368 chapter 1.6.4.3]
 - 369
 - Protection of LAN devices against access from the WAN compliant to [PP_GW,
370 chapter 1.4.6.4]
 - 371
 - Wake-Up Service compliant to [PP_GW, chapter 1.4.6.5]
 - 372
 - Privacy protection compliant to [PP_GW, chapter 1.4.6.6]
 - 373
 - Management of Security Functions compliant to [PP_GW, chapter 1.4.6.7]

- 374 • Cryptography of the TOE and its Security Module compliant to [PP_GW, chap-
375 ter 1.4.8]

376 **1.4.5 TOE logical boundary**

377 The logical boundary of the Gateway can be defined by its security features:

- 378 • *Handling of Meter Data*, collection and processing of Meter Data, submission
379 to authorised external entities (e.g. one of the service providers involved) where
380 necessary protected by a digital signature
- 381 • *Protection of authenticity, integrity and confidentiality* of data temporarily or per-
382 sistently stored in the Gateway, transferred locally within the LAN and trans-
383 ferred in the WAN (between Gateway and authorised external entities)
- 384 • *Firewalling* of information flows to the WAN and information flow control among
385 Meters, Controllable Local Systems and the WAN
- 386 • *A Wake-Up-Service* that allows to contact the TOE from the WAN side
- 387 • *Privacy preservation*
- 388 • *Management of Security Functionality*
- 389 • *Identification and Authentication* of TOE users

390 The following sections introduce the security functionality of the TOE in more detail.

391 1.4.5.1 Handling of Meter Data¹³

392 The Gateway is responsible for handling Meter Data. It receives the Meter Data from the
393 Meter(s), processes it, stores it and submits it to external entities.

394 The TOE utilises Processing Profiles to determine which data shall be sent to which
395 component or external entity. A Processing Profile defines:

- 396 • how Meter Data must be processed,
- 397 • which processed Meter Data must be sent in which intervals,
- 398 • to which component or external entity,
- 399 • signed using which key material,
- 400 • encrypted using which key material,
- 401 • whether processed Meter Data shall be pseudonymised or not, and
- 402 • which pseudonym shall be used to send the data.

13 Please refer to chapter 3.2 for an exact definition of the various data types.

403 The Processing Profiles are not only the basis for the security features of the TOE; they
404 also contain functional aspects as they indicate to the Gateway how the Meter Data shall
405 be processed. More details on the Processing Profiles can be found in [TR-03109-1].

406 The Gateway restricts access to (processed) Meter Data in the following ways:

- 407 • consumers must be identified and authenticated first before access to any data
408 may be granted,
- 409 • the Gateway accepts Meter Data from authorised Meters only,
- 410 • the Gateway sends processed Meter Data to correspondingly authorised external
411 entities only.

412 The Gateway accepts data (e.g. configuration data, firmware updates) from correspond-
413 ingly authorised Gateway Administrators or correspondingly authorised external entities
414 only. This restriction is a prerequisite for a secure operation and therewith for a secure
415 handling of Meter Data. Further, the Gateway maintains a calibration log with all relevant
416 events that could affect the calibration of the Gateway.

417 These functionalities:

- 418 • prevent that the Gateway accepts data from or sends data to unauthorised en-
419 tities,
- 420 • ensure that only the minimum amount of data leaves the scope of control of the
421 consumer,
- 422 • preserve the integrity of billing processes and as such serve in the interests of
423 the consumer as well as in the interests of the supplier. Both parties are inter-
424 ested in an billing process that ensures that the value of the consumed amount
425 of a certain commodity (and only the used amount) is transmitted,
- 426 • preserve the integrity of the system components and their configurations.

427 The TOE offers a local interface to the consumer (see also IF_GW_CON in Figure 2)
428 and allows the consumer to obtain information via this interface. This information com-
429 prises the billing-relevant data (to allow the consumer to verify an invoice) and infor-
430 mation about which Meter Data has been and will be sent to which external entity. The
431 TOE ensures that the communication to the consumer is protected by using TLS and
432 ensures that consumers only get access to their own data. Therefore, the TOE contains
433 a web server that delivers the content to the web browser after successful authentication
434 of the user.

435 1.4.5.2 Confidentiality protection

436 The TOE protects data from unauthorised disclosure

- 437 • while received from a Meter via the LMN,
- 438 • while received from the administrator via the WAN,
- 439 • while temporarily stored in the volatile memory of the Gateway,
- 440 • while transmitted to the corresponding external entity via the WAN or HAN.

441 Furthermore, all data, which no longer have to be stored in the Gateway, are securely
442 erased to prevent any form of access to residual data via external interfaces of the TOE.
443 These functionalities protect the privacy of the consumer and prevent that an unauthor-
444 ised party is able to disclose any of the data transferred in and from the Smart Metering
445 System (e.g. Meter Data, configuration settings).

446 The TOE utilises the services of its Security Module for aspects of this functionality.

447 1.4.5.3 Integrity and Authenticity protection

448 The Gateway provides the following authenticity and integrity protection:

- 449 • Verification of authenticity and integrity when receiving Meter Data from a Meter
450 via the LMN, to verify that the Meter Data have been sent from an authentic
451 Meter and have not been altered during transmission. The TOE utilises the ser-
452 vices of its Security Module for aspects of this functionality.
- 453 • Application of authenticity and integrity protection measures when sending pro-
454 cessed Meter Data to an external entity, to enable the external entity to verify
455 that the processed Meter Data have been sent from an authentic Gateway and
456 have not been changed during transmission. The TOE utilises the services of
457 its Security Module for aspects of this functionality.
- 458 • Verification of authenticity and integrity when receiving data from an external
459 entity (e.g. configuration settings or firmware updates) to verify that the data
460 have been sent from an authentic and authorised external entity and have not
461 been changed during transmission. The TOE utilises the services of its Security
462 Module for aspects of this functionality.

463 These functionalities

- 464 • prevent within the Smart Metering System that data may be sent by a non-
465 authentic component without the possibility that the data recipient can detect
466 this,

- 467
- facilitate the integrity of billing processes and serve for the interests of the consumer as well as for the interest of the supplier. Both parties are interested in the transmission of correct processed Meter Data to be used for billing,

468

469

470

 - protect the Smart Metering System and a corresponding large scale Smart Grid infrastructure by preventing that data (e.g. Meter Data, configuration settings, or firmware updates) from forged components (with the aim to cause damage to the Smart Grid) will be accepted in the system.

471

472

473

474 1.4.5.4 Information flow control and firewall

475 The Gateway separates devices in the LAN of the consumer from the WAN and enforces
476 the following information flow control to control the communication between the networks
477 that the Gateway is attached to:

- only the Gateway may establish a connection to an external entity in the WAN¹⁴; specifically connection establishment by an external entity in the WAN or a Meter in the LMN to the WAN is not possible,
 - the Gateway can establish connections to devices in the LMN or in the HAN,
 - Meters in the LMN are only allowed to establish a connection to the Gateway,
 - the Gateway shall offer a wake-up service that allows external entities in the WAN to trigger a connection establishment by the Gateway,
 - connections are allowed to pre-configured addresses only,
 - only cryptographically-protected (i.e. encrypted, integrity protected and mutually authenticated) connections are possible.¹⁵
- 478
- 479
- 480
- 481
- 482
- 483
- 484
- 485
- 486
- 487

488 These functionalities

- prevent that the Gateway itself or the components behind the Gateway (i.e. Meters or Controllable Local Systems) can be conquered by a WAN attacker (as defined in section 3.4), that processed data are transmitted to the wrong external entity, and that processed data are transmitted without being confidentiality/authenticity/integrity-protected,
 - protect the Smart Metering System and a corresponding large scale infrastructure in two ways: by preventing that conquered components will send forged
- 489
- 490
- 491
- 492
- 493
- 494
- 495

14 Please note that this does not affect the functionality for a CLS to establish a secure channel to a party in the WAN. Technically however, this channel is established by the TOE who acts as a proxy between the CLS and the WAN.

15 To establish an encrypted channel the TOE may use the required protocols such as DHCP or PPP. Beside the establishment of an encrypted channel no unprotected communication between the TOE and external entities located in the WAN or LAN is allowed.

496 Meter Data (with the aim to cause damage to the Smart Grid), and by preventing
 497 that widely distributed Smart Metering Systems can be abused as a platform
 498 for malicious software/firmware to attack other systems in the WAN (e.g. a WAN
 499 attacker who would be able to install a botnet on components of the Smart Me-
 500 tering System).

501 The communication flows that are enforced by the Gateway between parties in the HAN,
 502 LMN and WAN are summarized in the following table¹⁶:

Source(1 st column) Destination (1 st row)	WAN	LMN	HAN
WAN	- (see following list)	No connection establishment allowed	No connection establishment allowed
LMN	No connection establishment allowed	- (see following list)	No connection establishment allowed
HAN	Connection establishment is allowed to trustworthy, pre-configured endpoints and via an encrypted channel only ¹⁷	No connection establishment allowed	- (see following list)

503 **Table 2: Communication flows between devices in different networks**

504 For communications within the different networks the following assumptions are defined:

- 505 1. Communications within the **WAN** are not restricted. However, the Gateway is
 506 not involved in this communication,
- 507 2. No communications between devices in the **LMN** are assumed. Devices in the
 508 LMN may only communicate to the Gateway and shall not be connected to any
 509 other network,
- 510 3. Devices in the **HAN** may communicate with each other. However, the Gateway
 511 is not involved in this communication. If devices in the HAN have a separate

16 Please note that this table only addresses the communication flow between devices in the various networks attached to the Gateway. It does not aim to provide an overview over the services that the Gateway itself offers to those devices nor an overview over the communication between devices in the same network. This information can be found in the paragraphs following the table.

17 The channel to the external entity in the WAN is established by the Gateway.

512 connection to parties in the WAN (beside the Gateway) this connection is as-
513 sumed to be appropriately protected. It should be noted that for the case that a
514 TOE connects to more than one HAN communications between devices within
515 different HAN via the TOE are only allowed if explicitly configured by a Gateway
516 Administrator.

517 Finally, the Gateway itself offers the following services within the various networks:

- 518 • the Gateway accepts the submission of Meter Data from the LMN,
- 519 • the Gateway offers a wake-up service at the WAN side as described in chapter
520 1.4.6.5 of [PP_GW],
- 521 • the Gateway offers a user interface to the HAN that allows CLS or consumers
522 to connect to the Gateway in order to read relevant information.

523 1.4.5.5 Wake-Up-Service

524 In order to protect the Gateway and the devices in the LAN against threats from the WAN
525 side the Gateway implements a strict firewall policy and enforces that connections with
526 external entities in the WAN shall only be established by the Gateway itself (e.g. when
527 the Gateway delivers Meter Data or contacts the Gateway Administrator to check for
528 updates)¹⁸.

529 While this policy is the optimal policy from a security perspective, the Gateway
530 Administrator may want to facilitate applications in which an instant communication to
531 the Gateway is required.

532 In order to allow this kind of re-activeness of the Gateway, this ST allows the Gateway
533 to keep existing connections to external entities open (please refer to [TR-03109-3] for
534 more details) and to offer a so called wake-up service.

535 The Gateway is able to receive a wake-up message that is signed by the Gateway
536 Administrator. The following steps are taken:

- 537 1. The Gateway verifies the wake-up packet. This comprises
 - 538 i. a check if the header identification is correct,
 - 539 ii. the recipient is the Gateway,
 - 540 iii. the wake-up packet has been sent/received within an acceptable period
541 of time in order to prevent replayed messages,

¹⁸ Please note that this does not affect the functionality for a CLS to establish a secure channel to a party in the WAN. Technically however, this channel is established by the TOE who acts as a proxy between the CLS and the WAN.

- 542 iv. the wake-up message has not been received before,
543 2. If the wake-up message could not be verified as described in step #1, the
544 message will be dropped/ignored. No further operations will be initiated and no
545 feedback is provided.
546 3. If the message could be verified as described in step #1, the signature of the
547 wake-up message will be verified. The Gateway uses the services of its Security
548 Module for signature verification.
549 4. If the signature of the wake-up message cannot be verified as described in step
550 #3 the message will be dropped/ignored. No feedback is given to the sending
551 external entity and the wake-up sequence terminates.
552 5. If the signature of the wake-up message could be verified successfully , the
553 Gateway initiates a connection to a pre-configured external entity; however no
554 feedback is given to the sending external entity.

555 More details on the exact implementation of this mechanism can be found in [TR-03109-
556 1, „Wake-Up Service“].

557 1.4.5.6 Privacy Preservation

558 The preservation of the privacy of the consumer is an essential aspect that is imple-
559 mented by the functionality of the TOE as required by this ST.

560 This contains two aspects:

561 The Processing Profiles that the TOE obeys facilitate an approach in which only a mini-
562 mum amount of data have to be submitted to external entities and therewith leave the
563 scope of control of the consumer. The mechanisms “encryption” and “pseudonymisation”
564 ensure that the data can only be read by the intended recipient and only contains an
565 association with the identity of the Meter if this is necessary.

566 On the other hand, the TOE provides the consumer with transparent information about
567 the information flows that happen with their data. In order to achieve this, the TOE im-
568 plements a consumer log that specifically contains the information about the information
569 flows which has been and will be authorised based on the previous and current Pro-
570 cessing Profiles. The access to this consumer log is only possible via a local interface
571 from the HAN and after authentication of the consumer. The TOE does only allow a
572 consumer access to the data in the consumer log that is related to their own consumption
573 or production. The following paragraphs provide more details on the information that is
574 included in this log:

575 **Monitoring of Data Transfers**

576 The TOE keeps track of each data transmission in the consumer log and allows the
577 consumer to see details on which information have been and will be sent (based on the
578 previous and current settings) to which external entity.

579 **Configuration Reporting**

580 The TOE provides detailed and complete reporting in the consumer log of each security
581 and privacy-relevant configuration setting. Additional to device specific configuration set-
582 tings, the consumer log contains the parameters of each Processing Profile. The con-
583 sumer log contains the configured addresses for internal and external entities including
584 the CLS.

585 **Audit Log and Monitoring**

586 The TOE provides all audit data from the consumer log at the user interface
587 IF_GW_CON. Access to the consumer log is only possible after successful authentica-
588 tion and only to information that the consumer has permission to (i.e. that has been
589 recorded based on events belonging to the consumer).

590 1.4.5.7 Management of Security Functions

591 The Gateway provides authorised Gateway Administrators with functionality to manage
592 the behaviour of the security functions and to update the TOE.

593 Further, it is defined that only authorised Gateway Administrators may be able to use
594 the management functionality of the Gateway (while the Security Module is used for the
595 authentication of the Gateway Administrator) and that the management of the Gateway
596 shall only be possible from the WAN side interface.

597 **System Status**

598 The TOE provides information on the current status of the TOE in the system log. Spe-
599 cifically it shall indicate whether the TOE operates normally or any errors have been
600 detected that are of relevance for the administrator.

601 1.4.5.8 Identification and Authentication

602 To protect the TSF as well as User Data and TSF data from unauthorized modification
603 the TOE provides a mechanism that requires each user to be successfully identified and
604 authenticated before allowing any other actions on behalf of that user. This functionality
605 includes the identification and authentication of users who receive data from the

606 Gateway as well as the identification and authentication of CLS located in HAN and
607 Meters located in LMN.

608 The Gateway provides different kinds of identification and authentication mechanisms
609 that depend on the user role and the used interfaces. Most of the mechanisms require
610 the usage of certificates. Only consumers are able to decide whether they use certifi-
611 cates or username and password for identification and authentication.

612 **1.4.6 The logical interfaces of the TOE**

613 The TOE offers its functionality as outlined before via a set of external interfaces. Figure
614 2 also indicates the cardinality of the interfaces. The following table provides an overview
615 of the mandatory external interfaces of the TOE and provides additional information:

Interface Name	Description
IF_GW_CON	Via this interface the Gateway provides the consumer ¹⁹ with the possibility to review information that is relevant for billing or the privacy of the consumer. Specifically the access to the consumer log is only allowed via this interface.
IF_GW_MTR	Interface between the Meter and the Gateway. The Gateway receives Meter Data via this interface. ²⁰
IF_GW_SM	The Gateway invokes the services of its Security Module via this interface.
IF_GW_CLS	CLS may use the communication services of the Gateway via this interface. The implementation of at least one interface for CLS is mandatory.
IF_GW_WAN	The Gateway submits information to authorised external entities via this interface.
IF_GW_SRV	Local interface via which the service technician has the possibility to review information that are relevant to maintain the Gateway. Specifically he has

¹⁹ Please note that this interface allows consumer (or consumer's CLS) to connect to the gateway in order to read consumer specific information.

²⁰ Please note that an implementation of this external interface is also required in the case that Meter and Gateway are implemented within one physical device in order to allow the extension of the system by another Meter.

	read access to the system log only via this interface. He has also the possibility to view non-TSF data via this interface.
--	---

616 **Table 3: Mandatory TOE external interfaces**

617 **1.4.7 The cryptography of the TOE and its Security Module**

618 Parts of the cryptographic functionality used in the upper mentioned functions is provided
 619 by a Security Module. The Security Module provides strong cryptographic functionality,
 620 random number generation, secure storage of secrets and supports the authentication
 621 of the Gateway Administrator. The Security Module is a different IT product and not part
 622 of the TOE as described in this ST. Nevertheless, it is physically embedded into the
 623 Gateway and protected by the same level of physical protection. The requirements
 624 applicable to the Security Module are specified in a separate PP (see [SecModPP]).

625 The following table provides a more detailed overview on how the cryptographic
 626 functions are distributed between the TOE and its Security Module.

Aspect	TOE	Security Module
Communication with external entities	<ul style="list-style-type: none"> • encryption • decryption • hashing • key derivation • MAC generation • MAC verification • secure storage of the TLS certificates 	Key negotiation: <ul style="list-style-type: none"> • support of the authentication of the external entity • secure storage of the private key • random number generation • digital signature verification and generation
Communication with the consumer	<ul style="list-style-type: none"> • encryption • decryption • hashing • key derivation • MAC generation • MAC verification • secure storage of the TLS certificates 	Key negotiation: <ul style="list-style-type: none"> • support of the authentication of the consumer • secure storage of the private key • digital signature verification and generation • random number generation

Communication with the Meter	<ul style="list-style-type: none"> • encryption • decryption • hashing • key derivation • MAC generation • MAC verification • secure storage of the TLS certificates 	Key negotiation (in case of TLS connection): <ul style="list-style-type: none"> • support of the authentication of the meter • secure storage of the private key • digital signature verification and generation • random number generation
Signing data before submission to an external entity	<ul style="list-style-type: none"> • hashing 	Signature creation <ul style="list-style-type: none"> • secure storage of the private key
Content data encryption and integrity protection	<ul style="list-style-type: none"> • encryption • decryption • MAC generation • key derivation • secure storage of the public Key 	Key negotiation: <ul style="list-style-type: none"> • secure storage of the private key • random number generation

627 **Table 4: Cryptographic support of the TOE and its Security Module**

628

629 1.4.7.1 Content data encryption vs. an encrypted channel

630 The TOE utilises concepts of the encryption of data on the content level as well as the
631 establishment of a trusted channel to external entities.

632 As a general rule, all processed Meter Data that is prepared to be submitted to ex-
633 ternal entities is encrypted and integrity protected on a content level using CMS (ac-
634 cording to [TR-03109-1-I]).

635 Further, all communication with external entities is enforced to happen via encrypted,
636 integrity protected and mutually authenticated channels.

637 This concept of encryption on two layers facilitates use cases in which the external
638 party that the TOE communicates with is not the final recipient of the Meter Data. In

639 this way, it is for example possible that the Gateway Administrator receives Meter
640 Data that they forward to other parties. In such a case, the Gateway Administrator is
641 the endpoint of the trusted channel but cannot read the Meter Data.

642 Administration data that is transmitted between the Gateway Administrator and the TOE
643 is also encrypted and integrity protected using CMS.

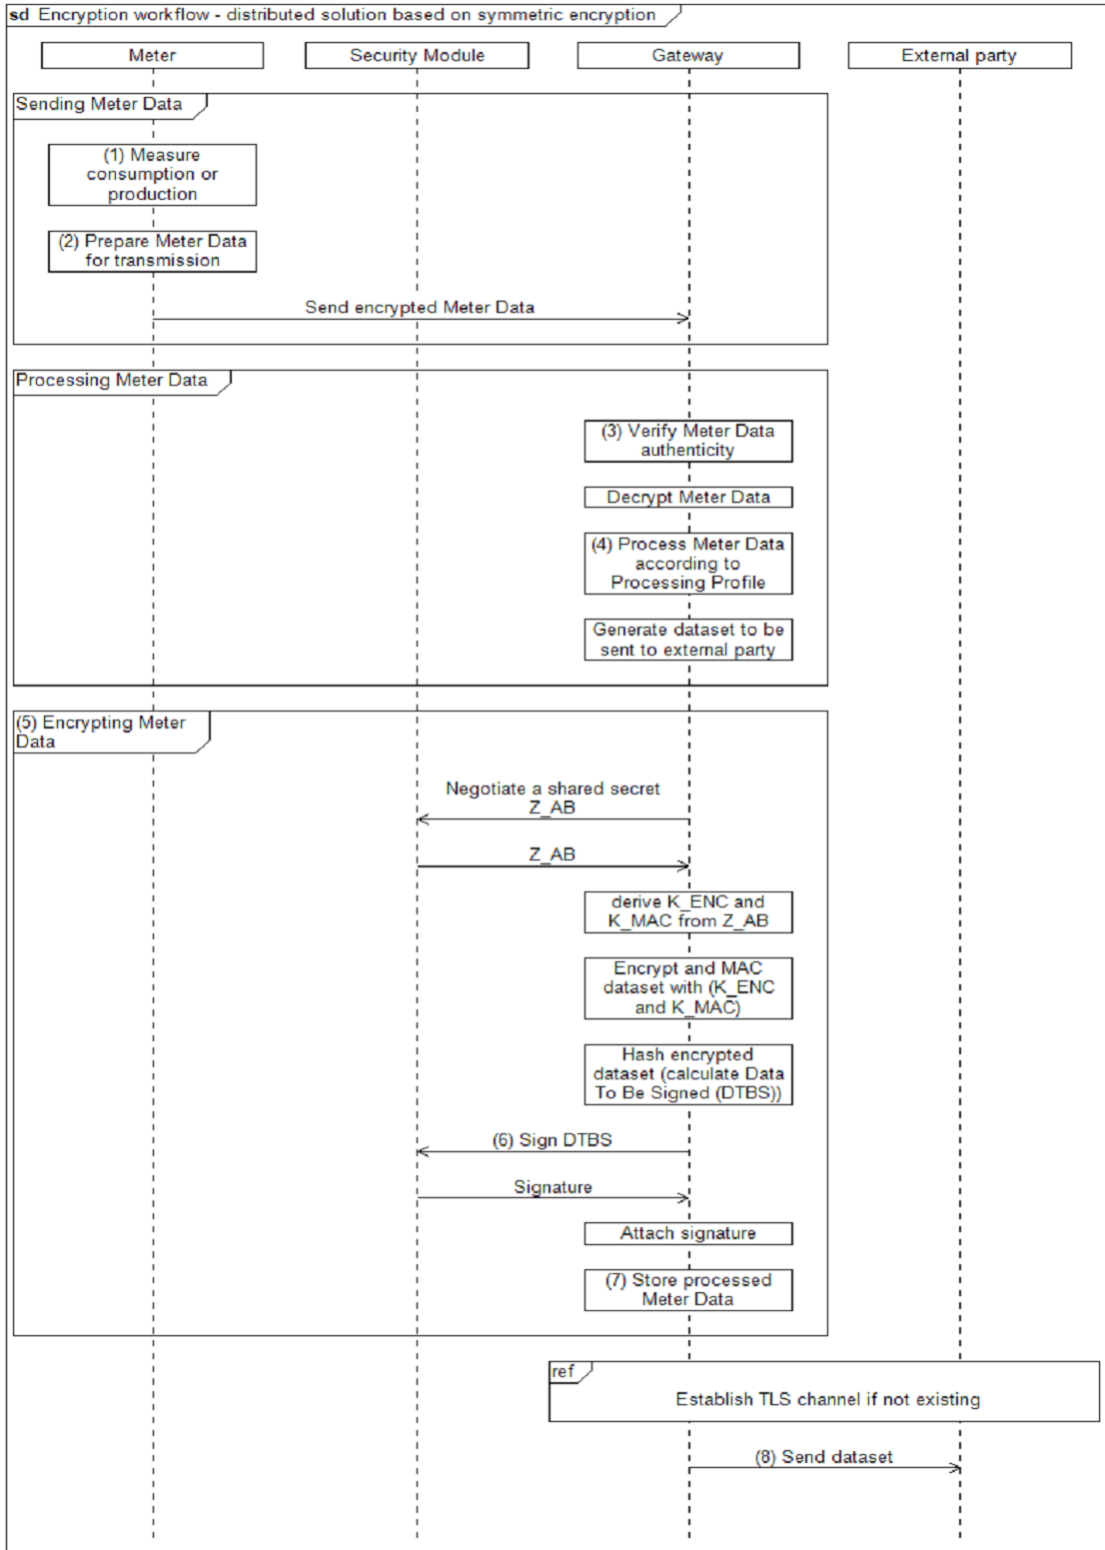

644 The following figure introduces the communication process between the Meter, the TOE
645 and external entities (focussing on billing-relevant Meter Data).

646 The basic information flow for Meter Data is as follows and shown in Figure 5:

- 647 1. The Meter measures the consumption or production of a certain commodity.
- 648 2. The Meter Data is prepared for transmission:
 - 649 a. The Meter Data is typically signed (typically using the services of an
650 integrated Security Module).
 - 651 b. If the communication between the Meter and the Gateway is performed
652 bidirectional, the Meter Data is transmitted via an encrypted and mutually
653 authenticated channel to the Gateway. Please note that the submission of
654 this information may be triggered by the Meter or the Gateway.
- 655 or
- 656 c. If a unidirectional communication is performed between the Meter and the
657 Gateway, the Meter Data is encrypted using a symmetric algorithm
658 (according to [TR-03109-3]) and facilitating a defined data structure to ensure
659 the authenticity and confidentiality.
- 660 3. The authenticity and integrity of the Meter Data is verified by the Gateway.
- 661 4. If (and only if) authenticity and integrity have been verified successfully, the
662 Meter Data is further processed by the Gateway according to the rules in the
663 Processing Profile else the cryptographic information flow will be cancelled.
- 664 5. The processed Meter Data is encrypted and integrity protected using CMS
665 (according to [TR-03109-1-I]) for the final recipient of the data²¹.
- 666 6. The processed Meter Data is signed using the services of the Security Module.
- 667 7. The processed and signed Meter Data may be stored for a certain amount of
668 time.

21 Optionally the Meter Data can additionally be signed before any encryption is done.

- 669 8. The processed Meter Data is finally submitted to an authorised external entity
 670 in the WAN via an encrypted and mutually authenticated channel.

671
 672 **Figure 5: Cryptographic information flow for distributed Meters and Gateway**
 673

674 **TOE life-cycle**

675 The life-cycle of the TOE can be separated into the following phases:

- 676 1. Development
- 677 2. Production
- 678 3. Pre-personalization at the developer's premises (without Security Module)
- 679 4. Pre-personalization and integration of Security Module
- 680 5. Delivery to the MPO
- 681 6. Delivery by the MPO to the installation and operational environment
- 682 7. Installation and start of operation
- 683 8. Personalization
- 684 9. Normal operation

685 A detailed description of the phases #1 to #4 and #6 to #7 is provided in [TR-03109-1-
686 VI], while phase #5 is described in the TOE manuals.

687 The TOE will be delivered after phase “Pre-personalization and integration of Security
688 Module”. The phase “Personalization” will be performed when the TOE is started for the
689 first time after phase “Installation and start of operation”. The TOE delivery process is
690 specified in [AGD_SEC].

691 2 Conformance Claims

692 2.1 CC Conformance Claim

- 693 • This ST has been developed using Version 3.1 Revision 5 of Common Criteria
694 [CC].
- 695 • This ST is [CC] part 2 extended due to the use of FPR_CON.1.
- 696 • This ST claims conformance to [CC] part 3; no extended assurance compo-
697 nents have been defined.

698

699 2.2 PP Claim / Conformance Statement

700 This Security Target claims strict conformance to Protection Profile [PP_GW].

701 In comparison to the PP, the assumption A.Delivery and the security objective for the
702 environment OE.Delivery have been added and a refinement on the assurance compo-
703 nent ALC_DEL.1 has been made in order to reduce the certified scope of the TOE de-
704 livery to the MPO.

705

706 2.3 Package Claim

707 This Security Target claims an assurance package EAL4 augmented by AVA_VAN.5
708 and ALC_FLR.2 as defined in [CC] Part 3 for product certification.

709

710 2.4 Conformance Claim Rationale

711 This Security Target claims strict conformance to only one PP [PP_GW].

712 This Security Target is consistent to the TOE type according to [PP_GW] because the
713 TOE is a communication Gateway that provides different external communication inter-
714 faces and enables the data communication between these interfaces and connected IT
715 systems. It further collects processes, and stores Meter Data.

716 This Security Target is consistent to the security problem defined in [PP_GW].

717 This Security Target is consistent to the security objectives stated in [PP_GW], no secu-
718 rity objective of the PP is removed, nor added to this Security Target.

719 This Security Target is consistent to the security requirements stated in [PP_GW], no
720 security requirement of the PP is removed, nor added to this Security Target.
721

722 3 Security Problem Definition

723 3.1 External entities

724 The following external entities interact with the system consisting of Meter and Gateway.
 725 Those roles have been defined for the use in this Security Target. It is possible that a
 726 party implements more than one role in practice.

Role	Description
Consumer	The authorised individual or organization that “owns” the Meter Data. In most cases, this will be tenants or house owners consuming electricity, water, gas or further commodities. However, it is also possible that the consumer produces or stores energy (e.g. with their own solar plant).
Gateway Administrator	Authority that installs, configures, monitors, and controls the Smart Meter Gateway.
Service Technician	The authorised individual that is responsible for diagnostic purposes.
Authorised External Entity / User	Human or IT entity possibly interacting with the TOE from outside of the TOE boundary. In the context of this ST, the term <i>user</i> or <i>external entity</i> serve as a hypernym for all entities mentioned before.

727 **Table 5: Roles used in the Security Target**

728

729 3.2 Assets

730 The following tables introduces the relevant assets for this Security Target. The tables
 731 focus on the assets that are relevant for the Gateway and does not claim to provide an
 732 overview over all assets in the Smart Metering System or for other devices in the LMN.

733 The following Table 6 lists all assets typified as “user data”:

734

Asset	Description	Need for Protection
Meter Data	<p>Meter readings that allow calculation of the quantity of a commodity, e.g. electricity, gas, water or heat consumed over a period.</p> <p>Meter Data comprise Consumption or Production Data (billing-relevant) and grid status data (not billing-relevant).</p> <p>While billing-relevant data needs to have a relation to the Consumer, grid status data do not have to be directly related to a Consumer.</p>	<ul style="list-style-type: none"> • According to their specific need (see below)
System log data	<p>Log data from the</p> <ul style="list-style-type: none"> • system log. 	<ul style="list-style-type: none"> • Integrity • Confidentiality (only authorised SMGW administrators and Service technicians may read the log data)
Consumer log data	<p>Log data from the</p> <ul style="list-style-type: none"> • consumer log. 	<ul style="list-style-type: none"> • Integrity • Confidentiality (only authorised Consumers may read the log data)
Calibration log data	<p>Log data from the</p> <ul style="list-style-type: none"> • calibration log. 	<ul style="list-style-type: none"> • Integrity • Confidentiality (only authorised SMGW administrators may read the log data)
Consumption Data	<p>Billing-relevant part of Meter Data. Please note that the term <i>Consumption Data</i> implicitly includes Production Data.</p>	<ul style="list-style-type: none"> • Integrity and authenticity (comparable to the classical meter and its security requirements) • Confidentiality (due to privacy concerns)

Status Data	Grid status data, subset of Meter Data that is not billing-relevant ²² .	<ul style="list-style-type: none"> • Integrity and authenticity (comparable to the classical meter and its security requirements) • Confidentiality (due to privacy concerns)
Supplementary Data	The Gateway may be used for communication purposes by devices in the LMN or HAN. It may be that the functionality of the Gateway that is used by such a device is limited to pure (but secure) communication services. Data that is transmitted via the Gateway but that does not belong to one of the aforementioned data types is named <i>Supplementary Data</i> .	<ul style="list-style-type: none"> • According to their specific need
Data	The term <i>Data</i> is used as hypernym for <i>Meter Data and Supplementary Data</i> .	<ul style="list-style-type: none"> • According to their specific need
Gateway time	Date and time of the real-time clock of the Gateway. Gateway Time is used in Meter Data records sent to external entities.	<ul style="list-style-type: none"> • Integrity • Authenticity (when time is adjusted to an external reference time)
Personally Identifiable Information (PII)	Personally Identifiable Information refers to information that can be used to uniquely identify, contact, or locate a single person or can be used with other sources to uniquely identify a single individual.	<ul style="list-style-type: none"> • Confidentiality

735 **Table 6: Assets (User data)**

736 Table 7 lists all assets typified as “TSF data”:

²² Please note that these readings and data of the Meter which are not relevant for billing may require an explicit endorsement of the consumer(s).

Asset	Description	Need for Protection
Meter config (secondary asset)	Configuration data of the Meter to control its behaviour including the Meter identity. Configuration data is transmitted to the Meter via the Gateway.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality
Gateway config (secondary asset)	Configuration data of the Gateway to control its behaviour including the Gateway identity, the Processing Profiles and certificate/key material for authentication.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality
CLS config (secondary asset)	Configuration data of a CLS to control its behaviour. Configuration data is transmitted to the CLS via the Gateway.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality
Firmware update (secondary asset)	Firmware update that is downloaded by the TOE to update the firmware of the TOE.	<ul style="list-style-type: none"> • Integrity and authenticity
Ephemeral keys (secondary asset)	Ephemeral cryptographic material used by the TOE for cryptographic operations.	<ul style="list-style-type: none"> • Integrity and authenticity • Confidentiality

737

Table 7: Assets (TSF data)

738

739 3.3 Assumptions

740 In this threat model the following assumptions about the environment of the components
741 need to be taken into account in order to ensure a secure operation.

742 **A.ExternalPrivacy** It is assumed that authorised and authenticated external
743 entities receiving any kind of privacy-relevant data or bill-
744 ing-relevant data and the applications that they operate are
745 trustworthy (in the context of the data that they receive) and
746 do not perform unauthorised analyses of this data with re-
747 spect to the corresponding Consumer(s).

748 **A.TrustedAdmins** It is assumed that the Gateway Administrator and the Ser-
749 vice Technician are trustworthy and well-trained.

750 **A.PhysicalProtection** It is assumed that the TOE is installed in a non-public en-
751 vironment within the premises of the Consumer which pro-
752 vides a basic level of physical protection. This protection
753 covers the TOE, the Meter(s) that the TOE communicates
754 with and the communication channel between the TOE and
755 its Security Module.

756 **A.ProcessProfile** The Processing Profiles that are used when handling data
757 are assumed to be trustworthy and correct.

758 **A.Update** It is assumed that firmware updates for the Gateway that
759 can be provided by an authorised external entity have un-
760 dergone a certification process according to this Security
761 Target before they are issued and can therefore be as-
762 sumed to be correctly implemented. It is further assumed
763 that the external entity that is authorised to provide the up-
764 date is trustworthy and will not introduce any malware into
765 a firmware update.

766 **A.Network** It is assumed that

- 767 • a WAN network connection with a sufficient reliabil-
768 ity and bandwidth for the individual situation is
769 available,
- 770 • one or more trustworthy sources for an update of
771 the system time are available in the WAN,

- 772
- 773
- 774
- 775
- 776
- the Gateway is the only communication gateway for Meters in the LMN²³,
 - if devices in the HAN have a separate connection to parties in the WAN (beside the Gateway) this connection is appropriately protected.

777 **A.Keygen**

778

779

780

It is assumed that the ECC key pair for a Meter (TLS) is generated securely according to [TR-03109-3] and brought into the Gateway in a secure way by the Gateway Administrator.

781 **A.Delivery**

782

783

784

785

786

787

788

After the reception of the TOE by the MPO, the MPO is responsible for the secure delivery of the TOE to the installation and operational environment. It is assumed that the MPO is trustworthy in context of this delivery and well trained and takes appropriate security measures to ensure protection against undetected manipulation or undetected replacement of the TOE during such a delivery to ensure integrity and authenticity of the TOE.

789

790

Note that adhering to [MSB-LK] is sufficient for MPOs to fulfill this assumption.

791 **Application Note 1:**

792

793

794

795

This ST acknowledges that the Gateway cannot be completely protected against unauthorised physical access by its environment. However, it is important for the overall security of the TOE that it is not installed within a public environment.

796

797

798

799

800

The level of physical protection that is expected to be provided by the environment is the same level of protection that is expected for classical meters that operate according to the regulations of the national calibration authority [TR-03109-1].

23 Please note that this assumption holds on a logical level rather than on a physical one. It may be possible that the Meters in the LMN have a physical connection to other devices that would in theory also allow a communication. This is specifically true for wireless communication technologies. It is further possible that signals of Meters are amplified by other devices or other Meters on the physical level without violating this assumption. However, it is assumed that the Meters do only communicate with the TOE and that only the TOE is able to decrypt the data sent by the Meter.

801 **Application Note 2:** The Processing Profiles that are used for information flow
802 control as referred to by A.ProcessProfile are an essential
803 factor for the preservation of the privacy of the Consumer.
804 The Processing Profiles are used to determine which data
805 shall be sent to which entity at which frequency and how
806 data are processed, e.g. whether the data needs to be re-
807 lated to the Consumer (because it is used for billing pur-
808 poses) or whether the data shall be pseudonymised.

809 The Processing Profiles shall be visible for the Consumer
810 to allow a transparent communication.

811 It is essential that Processing Profiles correctly define the
812 amount of information that must be sent to an external en-
813 tity. Exact regulations regarding the Processing Profiles
814 and the Gateway Administrator are beyond the scope of
815 this Security Target.

816

817 **3.4 Threats**

818 The following sections identify the threats that are posed against the assets handled by
819 the Smart Meter System. Those threats are the result of a threat model that has been
820 developed for the whole Smart Metering System first and then has been focussed on
821 the threats against the Gateway. It should be noted that the threats in the following par-
822 agraphs consider two different kinds of attackers:

- 823 • Attackers having physical access to Meter, Gateway, a connection between
824 these components or local logical access to any of the interfaces (local at-
825 tacker), trying to disclose or alter assets while stored in the Gateway or while
826 transmitted between Meters in the LMN and the Gateway. Please note that the
827 following threat model assumes that the local attacker has less motivation than
828 the WAN attacker as a successful attack of a local attacker will always only
829 impact one Gateway. Please further note that the local attacker includes au-
830 thorised individuals like consumers.
- 831 • An attacker located in the WAN (WAN attacker) trying to compromise the con-
832 fidentiality and/or integrity of the processed Meter Data and or configuration
833 data transmitted via the WAN, or attacker trying to conquer a component of the

834 infrastructure (i.e. Meter, Gateway or Controllable Local System) via the WAN
835 to cause damage to a component itself or to the corresponding grid (e.g. by
836 sending forged Meter Data to an external entity).

837 The specific rationale for this situation is given by the expected benefit of a successful
838 attack. An attacker who has to have physical access to the TOE that they are attacking,
839 will only be able to compromise one TOE at a time. So the effect of a successful attack
840 will always be limited to the attacked TOE. A logical attack from the WAN side on the
841 other hand may have the potential to compromise a large amount of TOEs.

842

843 **T.DataModificationLocal** A local attacker may try to modify (i.e. alter, delete, insert,
844 replay or redirect) Meter Data when transmitted between
845 Meter and Gateway, Gateway and Consumer, or Gateway
846 and external entities. The objective of the attacker may be
847 to alter billing-relevant information or grid status infor-
848 mation. The attacker may perform the attack via any inter-
849 face (LMN, HAN, or WAN).

850 In order to achieve the modification, the attacker may also
851 try to modify secondary assets like the firmware or config-
852 uration parameters of the Gateway.

853 **T.DataModificationWAN** A WAN attacker may try to modify (i.e. alter, delete, insert,
854 replay or redirect) Meter Data, Gateway config data, Meter
855 config data, CLS config data or a firmware update when
856 transmitted between the Gateway and an external entity in
857 the WAN.

858 When trying to modify Meter Data, it is the objective of the
859 WAN attacker to modify billing-relevant information or grid
860 status data.

861 When trying to modify config data or a firmware update, the
862 WAN attacker tries to circumvent security mechanisms of
863 the TOE or tries to get control over the TOE or a device in
864 the LAN that is protected by the TOE.

865 **T.TimeModification** A local attacker or WAN attacker may try to alter the Gate-
866 way time. The motivation of the attacker could be e.g. to

867		change the relation between date/time and measured consumption or production values in the Meter Data records
868		(e.g. to influence the balance of the next invoice).
869		
870	T.DisclosureWAN	A WAN attacker may try to violate the privacy of the Consumer by disclosing Meter Data or configuration data (Meter config, Gateway config or CLS config) or parts of it
871		when transmitted between Gateway and external entities
872		in the WAN.
873		
874		
875	T.DisclosureLocal	A local attacker may try to violate the privacy of the Consumer by disclosing Meter Data transmitted between the TOE and the Meter. This threat is of specific importance if
876		Meters of more than one Consumer are served by one
877		Gateway.
878		
879		
880	T.Infrastructure	A WAN attacker may try to obtain control over Gateways, Meters or CLS via the TOE, which enables the WAN attacker to cause damage to Consumers or external entities
881		or the grids used for commodity distribution (e.g. by sending wrong data to an external entity).
882		
883		
884		
885		A WAN attacker may also try to conquer a CLS in the HAN first in order to logically attack the TOE from the HAN side.
886		
887	T.ResidualData	By physical and/or logical means a local attacker or a WAN attacker may try to read out data from the Gateway, which travelled through the Gateway before and which are no longer needed by the Gateway (i.e. Meter Data, Meter config, or CLS config).
888		
889		
890		
891		
892	T.ResidentData	A WAN or local attacker may try to access (i.e. read, alter, delete) information to which they don't have permission to while the information is stored in the TOE.
893		
894		
895		While the WAN attacker only uses the logical interface of the TOE that is provided into the WAN, the local attacker may also physically access the TOE.
896		
897		
898	T.Privacy	A WAN attacker may try to obtain more detailed information from the Gateway than actually required to fulfil the
899		

900 tasks defined by its role or the contract with the Consumer.
901 This includes scenarios in which an external entity that is
902 primarily authorised to obtain information from the TOE
903 tries to obtain more information than the information that
904 has been authorised as well as scenarios in which an at-
905 tacker who is not authorised at all tries to obtain infor-
906 mation.
907

908 3.5 Organizational Security Policies

909 This section lists the organizational security policies (OSP) that the Gateway shall com-
910 ply with:

911 **OSP.SM** The TOE shall use the services of a certified Security Mod-
912 ule for

- 913 • verification of digital signatures,
- 914 • generation of digital signatures,
- 915 • key agreement,
- 916 • key transport,
- 917 • key storage,
- 918 • Random Number Generation,

919 The Security Module shall be certified according to
920 [SecModPP] and shall be used in accordance with its rele-
921 vant guidance documentation.

922 **OSP.Log** The TOE shall maintain a set of log files as defined in [TR-
923 03109-1] as follows:

- 924 1. A system log of relevant events in order to allow an
925 authorised Gateway Administrator to analyse the
926 status of the TOE. The TOE shall also analyse the
927 system log automatically for a cumulation of secu-
928 rity relevant events.
- 929 2. A consumer log that contains information about the
930 information flows that have been initiated to the
931 WAN and information about the Processing Profiles
932 causing this information flow as well as the billing-
933 relevant information.
- 934 3. A calibration log (as defined in chapter 6.2.1) that
935 provides the Gateway Administrator with a possibil-
936 ity to review calibration relevant events.

937 The TOE shall further limit access to the information in the
938 different log files as follows:

- 939 1. Access to the information in the system log shall
940 only be allowed for an authorised Gateway

941 Administrator via the IF_GW_WAN interface of the
942 TOE and an authorised Service Technician via the
943 IF_GW_SRV interface of the TOE.

- 944 2. Access to the information in the calibration log shall
945 only be allowed for an authorised Gateway Admin-
946 istrator via the IF_GW_WAN interface of the TOE.
947 3. Access to the information in the consumer log shall
948 only be allowed for an authorised Consumer via the
949 IF_GW_CON interface of the TOE. The Consumer
950 shall only have access to their own information.

951 The system log may overwrite the oldest events in case
952 that the audit trail gets full.

953 For the consumer log the TOE shall ensure that a sufficient
954 amount of events is available (in order to allow a Consumer
955 to verify an invoice) but may overwrite older events in case
956 that the audit trail gets full.

957 For the calibration log, however, the TOE shall ensure the
958 availability of all events over the lifetime of the TOE.

959 4 Security Objectives

960 4.1 Security Objectives for the TOE

961 O.Firewall

962 The TOE shall serve as the connection point for the con-
963 nected devices within the LAN to external entities within
964 the WAN and shall provide firewall functionality in order to
965 protect the devices of the LMN and HAN (as long as they
966 use the Gateway) and itself against threats from the WAN
side.

967 The firewall:

- 968 • shall allow only connections established from HAN
969 or the TOE itself to the WAN (i.e. from devices in
970 the HAN to external entities in the WAN or from the
971 TOE itself to external entities in the WAN),
- 972 • shall provide a wake-up service on the WAN side
973 interface,
- 974 • shall not allow connections from the LMN to the
975 WAN,
- 976 • shall not allow any other services being offered on
977 the WAN side interface,
- 978 • shall not allow connections from the WAN to the
979 LAN or to the TOE itself,
- 980 • shall enforce communication flows by allowing traf-
981 fic from CLS in the HAN to the WAN only if confi-
982 dentiality-protected and integrity-protected and if
983 endpoints are authenticated.

984 O.SeparateIF

985 The TOE shall have physically separated ports for the
986 LMN, the HAN and the WAN and shall automatically detect
987 during its self test whether connections (wired or wireless),
if any, are wrongly connected.

988 **Application Note 3:** O.SeparateIF refers to physical inter-
989 faces and must not be fulfilled by a pure logical separation
990 of one physical interface only.

991	O.Conceal	To protect the privacy of its Consumers, the TOE shall conceal the communication with external entities in the WAN in order to ensure that no privacy-relevant information may be obtained by analysing the frequency, load, size or the absence of external communication. ²⁴
992		
993		
994		
995		
996	O.Meter	The TOE receives or polls information about the consumption or production of different commodities from one or multiple Meters and is responsible for handling this Meter Data.
997		
998		
999		
1000		This includes that:
1001		<ul style="list-style-type: none"> • The TOE shall ensure that the communication to the Meter(s) is established in an Gateway Administrator-definable interval or an interval as defined by the Meter,
1002		<ul style="list-style-type: none"> • the TOE shall enforce encryption and integrity protection for the communication with the Meter²⁵,
1003		<ul style="list-style-type: none"> • the TOE shall verify the integrity and authenticity of the data received from a Meter before handling it further,
1004		<ul style="list-style-type: none"> • the TOE shall process the data according to the definition in the corresponding Processing Profile,
1005		<ul style="list-style-type: none"> • the TOE shall encrypt the processed Meter Data for the final recipient, sign the data and
1006		<ul style="list-style-type: none"> • deliver the encrypted data to authorised external entities as defined in the corresponding Processing Profiles facilitating an encrypted channel,
1007		<ul style="list-style-type: none"> • the TOE shall store processed Meter Data if an external entity cannot be reached and re-try to send
1008		
1009		
1010		
1011		
1012		
1013		
1014		
1015		
1016		
1017		
1018		

²⁴ It should be noted that this requirement only applies to communication flows in the WAN.

²⁵ It is acknowledged that the implementation of a secure channel between the Meter and the Gateway is a security function of both units. The TOE as defined in this Security Target only has a limited possibility to secure this communication as both sides have to sign responsible for the quality of a cryptographic connection. However, it should be noted that the encryption of this channel only needs to protect against the Local Attacker possessing a basic attack potential and that the Meter utilises the services of its Security Module to negotiate the channel.

1019 the data until a configurable number of unsuccessful
 1020 retrials has been reached,
 1021 • the TOE shall pseudonymize the data for parties
 1022 that do not need the relation between the processed
 1023 Meter Data and the identity of the Consumer.
 1024

1025 **O.Crypt**

1026 The TOE shall provide cryptographic functionality as follows:

- 1027 • authentication, integrity protection and encryption
- 1028 of the communication and data to external entities
- 1029 in the WAN,
- 1030 • authentication, integrity protection and encryption
- 1031 of the communication to the Meter,
- 1032 • authentication, integrity protection and encryption
- 1033 of the communication to the Consumer,
- 1034 • replay detection for all communications with external
- 1035 entities,
- 1036 • encryption of the persistently stored TSF and user
- 1037 data of the TOE²⁶.

1038 In addition, the TOE shall generate the required keys utilizing
 1039 the services of its Security Module²⁷, ensure that the
 1040 keys are only used for an acceptable amount of time and
 1041 destroy ephemeral²⁸ keys if no longer needed.²⁹

1042 **O.Time**

1043 The TOE shall provide reliable time stamps and update
 1044 its internal clock in regular intervals by retrieving reliable
 1045 time information from a dedicated reliable source in the
 WAN.

26 The encryption of the persistent memory shall support the protection of the TOE against local attacks.

27 Please refer to chapter 1.4.7 for an overview on how the cryptographic functions are distributed between the TOE and its Security Module.

28 This objective addresses the destruction of ephemeral keys only because all keys that need to be stored persistently are stored in the Security Module.

29 Please refer to chapter F.9 of part 2 of [CC] for more detailed information about what kind of information this objective applies to.

1046	O.Protect	The TOE shall implement functionality to protect its security functions against malfunctions and tampering.
1047		
1048		Specifically, the TOE shall
1049		<ul style="list-style-type: none"> • encrypt its TSF and user data as long as it is not in use,
1050		
1051		<ul style="list-style-type: none"> • overwrite any information that is no longer needed to ensure that it is no longer available via the external interfaces of the TOE³⁰,
1052		
1053		
1054		<ul style="list-style-type: none"> • monitor user data and the TOE firmware for integrity errors,
1055		
1056		<ul style="list-style-type: none"> • contain a test that detects whether the interfaces for WAN and LAN are separate,
1057		
1058		<ul style="list-style-type: none"> • have a fail-safe design that specifically ensures that no malfunction can impact the delivery of a commodity (e.g. energy, gas, heat or water)³¹,
1059		
1060		<ul style="list-style-type: none"> • make any physical manipulation within the scope of the intended environment detectable for the Consumer and Gateway Administrator.
1061		
1062		
1063		
1064	O.Management	The TOE shall only provide authorised Gateway Administrators with functions for the management of the security features.
1065		
1066		
1067		The TOE shall ensure that any change in the behaviour of the security functions can only be achieved from the WAN side interface. Any management activity from a local interface may only be read only.
1068		
1069		
1070		
1071		Further, the TOE shall implement a secure mechanism to update the firmware of the TOE that ensures that only authorised entities are able to provide updates for the TOE
1072		
1073		

³⁰ Please refer to chapter F.9 of part 2 of [CC] for more detailed information about what kind of information this objective applies to.

³¹ Indeed this Security Target acknowledges that the Gateway and the Meters have no possibility at all to impact the delivery of a commodity. Even an intentional stop of the delivery of a certain commodity is not within the scope of this Security Target. It should however be noted that such a functionality may be realised by a CLS that utilises the services of the TOE for its communication.

1074 and that only authentic and integrity protected updates are
1075 applied.

1076 **O.Log**

1077 The TOE shall maintain a set of log files as defined in [TR-
1078 03109-1] as follows:

- 1078 1. A system log of relevant events in order to allow an
1079 authorised Gateway Administrator or an authorised
1080 Service Technician to analyse the status of the
1081 TOE. The TOE shall also analyse the system log
1082 automatically for a cumulation of security relevant
1083 events.
- 1084 2. A consumer log that contains information about the
1085 information flows that have been initiated to the
1086 WAN and information about the Processing Profiles
1087 causing this information flow as well as the billing-
1088 relevant information and information about the sys-
1089 tem status (including relevant error messages).
- 1090 3. A calibration log that provides the Gateway Admin-
1091 istrator with a possibility to review calibration rele-
1092 vant events.

1093 The TOE shall further limit access to the information in the
1094 different log files as follows:

- 1095 1. Access to the information in the system log shall
1096 only be allowed for an authorised Gateway Admin-
1097 istrator via IF_GW_WAN or for an authorised Ser-
1098 vice Technician via IF_GW_SRV.
- 1099 2. Access to the information in the consumer log shall
1100 only be allowed for an authorised Consumer via the
1101 IF_GW_CON interface of the TOE and via a se-
1102 cured (i.e. confidentiality and integrity protected)
1103 connection. The Consumer shall only have access
1104 to their own information.
- 1105 3. Read-only access to the information in the calibra-
1106 tion log shall only be allowed for an authorised

1107 Gateway Administrator via the WAN interface of the
1108 TOE.

1109 The system log may overwrite the oldest events in case
1110 that the audit trail gets full.

1111 For the consumer log, the TOE shall ensure that a suffi-
1112 cient amount of events is available (in order to allow a Con-
1113 sumer to verify an invoice) but may overwrite older events
1114 in case that the audit trail gets full.

1115 For the calibration log however, the TOE shall ensure the
1116 availability of all events over the lifetime of the TOE.

1117 **O.Access** The TOE shall control the access of external entities in
1118 WAN, HAN or LMN to any information that is sent to, from
1119 or via the TOE via its external interfaces³². Access control
1120 shall depend on the destination interface that is used to
1121 send that information.

1122

1123 4.2 Security Objectives for the Operational Environment

1124 **OE.ExternalPrivacy** Authorised and authenticated external entities receiving
1125 any kind of private or billing-relevant data shall be trustwor-
1126 thy and shall not perform unauthorised analyses of these
1127 data with respect to the corresponding consumer(s).

1128 **OE.TrustedAdmins** The Gateway Administrator and the Service Technician
1129 shall be trustworthy and well-trained.

1130 **OE.PhysicalProtection** The TOE shall be installed in a non-public environment
1131 within the premises of the Consumer that provides a basic
1132 level of physical protection. This protection shall cover the
1133 TOE, the Meters that the TOE communicates with and the
1134 communication channel between the TOE and its Security

³² While in classical access control mechanisms the Gateway Administrator gets complete access, the TOE also maintains a set of information (specifically the consumer log) to which Gateway Administrators have restricted access.

1135		Module. Only authorised individuals may physically access
1136		the TOE.
1137	OE.Profile	The Processing Profiles that are used when handling data
1138		shall be obtained from a trustworthy and reliable source
1139		only.
1140	OE.SM	The environment shall provide the services of a certified
1141		Security Module for
1142		<ul style="list-style-type: none">• verification of digital signatures,
1143		<ul style="list-style-type: none">• generation of digital signatures,
1144		<ul style="list-style-type: none">• key agreement,
1145		<ul style="list-style-type: none">• key transport,
1146		<ul style="list-style-type: none">• key storage,
1147		<ul style="list-style-type: none">• Random Number Generation.
1148		The Security Module used shall be certified according to
1149		[SecModPP] and shall be used in accordance with its rele-
1150		vant guidance documentation.
1151	OE.Update	The firmware updates for the Gateway that can be pro-
1152		vided by an authorised external entity shall undergo a cer-
1153		tification process according to this Security Target before
1154		they are issued to show that the update is implemented
1155		correctly. The external entity that is authorised to provide
1156		the update shall be trustworthy and ensure that no mal-
1157		ware is introduced via a firmware update.
1158	OE.Network	It shall be ensured that
1159		<ul style="list-style-type: none">• a WAN network connection with a sufficient reliabil-
1160		ity and bandwidth for the individual situation is
1161		available,
1162		<ul style="list-style-type: none">• one or more trustworthy sources for an update of
1163		the system time are available in the WAN,
1164		<ul style="list-style-type: none">• the Gateway is the only communication gateway for
1165		Meters in the LMN,

Table 8: Rationale for Security Objectives

1189

1190

1191 **4.3.2 Countering the threats**

1192 The following sections provide more detailed information on how the threats are coun-
1193 tered by the security objectives for the TOE and its operational environment.

1194

1195 4.3.2.1 General objectives

1196 The security objectives **O.Protect**, **O.Management** and **OE.TrustedAdmins** contribute
1197 to counter each threat and contribute to each OSP.

1198 **O.Management** is indispensable as it defines the requirements around the management
1199 of the Security Functions. Without a secure management no TOE can be secure. Also
1200 **OE.TrustedAdmins** contributes to this aspect as it provides the requirements on the
1201 availability of a trustworthy Gateway Administrator and Service Technician. **O.Protect** is
1202 present to ensure that all security functions are working as specified.

1203 Those general objectives will not be addressed in detail in the following paragraphs.

1204 4.3.2.2 T.DataModificationLocal

1205 The threat **T.DataModificationLocal** is countered by a combination of the security ob-
1206 jectives **O.Meter**, **O.Crypt**, **O.Log** and **OE.PhysicalProtection**.

1207 **O.Meter** defines that the TOE will enforce the encryption of communication when receiv-
1208 ing Meter Data from the Meter. **O.Crypt** defines the required cryptographic functionality.
1209 The objectives together ensure that the communication between the Meter and the TOE
1210 cannot be modified or released.

1211 **OE.PhysicalProtection** is of relevance as it ensures that access to the TOE is limited.

1212 4.3.2.3 T.DataModificationWAN

1213 The threat **T.DataModificationWAN** is countered by a combination of the security ob-
1214 jectives **O.Firewall** and **O.Crypt**.

1215 **O.Firewall** defines the connections for the devices within the LAN to external entities
1216 within the WAN and shall provide firewall functionality in order to protect the devices of
1217 the LMN and HAN (as long as they use the Gateway) and itself against threats from the
1218 WAN side. **O.Crypt** defines the required cryptographic functionality. Both objectives to-
1219 gether ensure that the data transmitted between the TOE and the WAN cannot be mod-
1220 ified by a WAN attacker.

1221 4.3.2.4 T.TimeModification

1222 The threat **T.TimeModification** is countered by a combination of the security objectives
1223 **O.Time, O.Crypt** and **OE.PhysicalProtection**.

1224 **O.Time** defines that the TOE needs a reliable time stamp mechanism that is also up-
1225 dated from reliable sources regularly in the WAN. **O.Crypt** defines the required crypto-
1226 graphic functionality for the communication to external entities in the WAN. Therewith,
1227 O.Time and O.Crypt are the core objective to counter the threat T.TimeModification.

1228 **OE.PhysicalProtection** is of relevance as it ensures that access to the TOE is limited.

1229 4.3.2.5 T.DisclosureWAN

1230 The threat **T.DisclosureWAN** is countered by a combination of the security objectives
1231 **O.Firewall, O.Conceal** and **O.Crypt**.

1232 **O.Firewall** defines the connections for the devices within the LAN to external entities
1233 within the WAN and shall provide firewall functionality in order to protect the devices of
1234 the LMN and HAN (as long as they use the Gateway) and itself against threats from the
1235 WAN side. **O.Crypt** defines the required cryptographic functionality. Both objectives to-
1236 gether ensure that the communication between the Meter and the TOE cannot be dis-
1237 closed.

1238 **O.Conceal** ensures that no information can be disclosed based on additional character-
1239 istics of the communication like frequency, load or the absence of a communication.

1240 4.3.2.6 T.DisclosureLocal

1241 The threat **T.DisclosureLocal** is countered by a combination of the security objectives
1242 **O.Meter, O.Crypt** and **OE.PhysicalProtection**.

1243 **O.Meter** defines that the TOE will enforce the encryption and integrity protection of com-
1244 munication when polling or receiving Meter Data from the Meter. **O.Crypt** defines the
1245 required cryptographic functionality. Both objectives together ensure that the communi-
1246 cation between the Meter and the TOE cannot be disclosed.

1247 **OE.PhysicalProtection** is of relevance as it ensures that access to the TOE is limited.

1248 4.3.2.7 T.Infrastructure

1249 The threat **T.Infrastructure** is countered by a combination of the security objectives
1250 **O.Firewall, O.SeparateIF, O.Meter** and **O.Crypt**.

1251 **O.Firewall** is the core objective that counters this threat. It ensures that all communica-
1252 tion flows to the WAN are initiated by the TOE. The fact that the TOE does not offer any
1253 services to the WAN side and will not react to any requests (except the wake-up call)
1254 from the WAN is a significant aspect in countering this threat. Further the TOE will only
1255 communicate using encrypted channels to authenticated and trustworthy parties which
1256 mitigates the possibility that an attacker could try to hijack a communication.

1257 **O.Meter** defines that the TOE will enforce the encryption and integrity protection for the
1258 communication with the Meter.

1259 **O.SeparateIF** facilitates the disjunction of the WAN from the LMN.

1260 **O.Crypt** supports the mitigation of this threat by providing the required cryptographic
1261 primitives.

1262 4.3.2.8 T.ResidualData

1263 The threat **T.ResidualData** is mitigated by the security objective **O.Protect** as this se-
1264 curity objective defines that the TOE shall delete information as soon as it is no longer
1265 used. Assuming that a TOE follows this requirement, an attacker cannot read out any
1266 residual information as it does simply not exist.

1267 4.3.2.9 T.ResidentData

1268 The threat **T.ResidentData** is countered by a combination of the security objectives
1269 **O.Access**, **O.Firewall**, **O.Protect** and **O.Crypt**. Further, the environment (**OE.Physi-**
1270 **calProtection** and **OE.TrustedAdmins**) contributes to this.

1271 **O.Access** defines that the TOE shall control the access of users to information via the
1272 external interfaces.

1273 The aspect of a local attacker with physical access to the TOE is covered by a combi-
1274 nation of **O.Protect** (defining the detection of physical manipulation) and **O.Crypt** (re-
1275 quiring the encryption of persistently stored TSF and user data of the TOE). In addition,
1276 the physical protection provided by the environment (**OE.PhysicalProtection**) and the
1277 Gateway Administrator (**OE.TrustedAdmins**) who could realise a physical manipulation
1278 contribute to counter this threat.

1279 The aspect of a WAN attacker is covered by **O.Firewall** as this objective ensures that
1280 an adequate level of protection is realised against attacks from the WAN side.

1281 4.3.2.10 T.Privacy

1282 The threat **T.Privacy** is primarily addressed by the security objectives **O.Meter**, **O.Crypt**
1283 and **O.Firewall** as these objective ensures that the TOE will only distribute Meter Data
1284 to external parties in the WAN as defined in the corresponding Processing Profiles and
1285 that the data will be protected for the transfer. **OE.Profile** is present to ensure that the
1286 Processing Profiles are obtained from a trustworthy and reliable source only.

1287 Finally, **O.Conceal** ensures that an attacker cannot obtain the relevant information for
1288 this threat by observing external characteristics of the information flow.

1289 **4.3.3 Coverage of organisational security policies**

1290 The following sections provide more detailed information about how the security objec-
1291 tives for the environment and the TOE cover the organizational security policies.

1292 4.3.3.1 OSP.SM

1293 The Organizational Security Policy **OSP.SM** that mandates that the TOE utilises the ser-
1294 vices of a certified Security Module is directly addressed by the security objectives
1295 **OE.SM** and **O.Crypt**. The objective **OE.SM** addresses the functions that the Security
1296 Module shall be utilised for as defined in **OSP.SM** and also requires a certified Security
1297 Module. **O.Crypt** defines the cryptographic functionalities for the TOE itself. In this con-
1298 text, it has to be ensured that the Security Module is operated in accordance with its
1299 guidance documentation.

1300 4.3.3.2 OSP.Log

1301 The Organizational Security Policy **OSP.Log** that mandates that the TOE maintains an
1302 audit log is directly addressed by the security objective for the TOE **O.Log**.

1303 **O.Access** contributes to the implementation of the OSP as it defines that also Gateway
1304 Administrators are not allowed to read/modify all data. This is of specific importance to
1305 ensure the confidentiality and integrity of the log data as is required by the **OSP.Log**.

1306 **4.3.4 Coverage of assumptions**

1307 The following sections provide more detailed information about how the security objec-
1308 tives for the environment cover the assumptions.

1309 4.3.4.1 A.ExternalPrivacy

1310 The assumption **A.ExternalPrivacy** is directly and completely covered by the security
1311 objective **OE.ExternalPrivacy**. The assumption and the objective for the environment
1312 are drafted in a way that the correspondence is obvious.

1313 4.3.4.2 A.TrustedAdmins

1314 The assumption **A.TrustedAdmins** is directly and completely covered by the security
1315 objective **OE.TrustedAdmins**. The assumption and the objective for the environment
1316 are drafted in a way that the correspondence is obvious.

1317 4.3.4.3 A.PhysicalProtection

1318 The assumption **A.PhysicalProtection** is directly and completely covered by the secu-
1319 rity objective **OE.PhysicalProtection**. The assumption and the objective for the envi-
1320 ronment are drafted in a way that the correspondence is obvious.

1321 4.3.4.4 A.ProcessProfile

1322 The assumption **A.ProcessProfile** is directly and completely covered by the security
1323 objective **OE.Profile**. The assumption and the objective for the environment are drafted
1324 in a way that the correspondence is obvious.

1325 4.3.4.5 A.Update

1326 The assumption **A.Update** is directly and completely covered by the security objective
1327 **OE.Update**. The assumption and the objective for the environment are drafted in a way
1328 that the correspondence is obvious.

1329 4.3.4.6 A.Network

1330 The assumption **A.Network** is directly and completely covered by the security objective
1331 **OE.Network**. The assumption and the objective for the environment are drafted in a way
1332 that the correspondence is obvious.

1333 4.3.4.7 A.Keygen

1334 The assumption **A.Keygen** is directly and completely covered by the security objective
1335 **OE.Keygen**. The assumption and the objective for the environment are drafted in a way
1336 that the correspondence is obvious.

1337 4.3.4.8 A.Delivery

1338 The assumption **A.Delivery** is directly and completely covered by the security objective
1339 **OE.Delivery**. The assumption and the objective for the environment are drafted in a way
1340 that the correspondence is obvious.

1341

1342 5 Extended Component definition

1343 5.1 Communication concealing (FPR_CON)

1344 The additional family Communication concealing (FPR_CON) of the Class FPR (Pri-
 1345 vacy) is defined here to describe the specific IT security functional requirements of the
 1346 TOE. The TOE shall prevent attacks against Personally Identifiable Information (PII) of
 1347 the Consumer that may be obtained by an attacker by observing the encrypted commu-
 1348 nication of the TOE with remote entities.

1349

1350 5.2 Family behaviour

1351 This family defines requirements to mitigate attacks against communication channels in
 1352 which an attacker tries to obtain privacy relevant information based on characteristics of
 1353 an encrypted communication channel. Examples include but are not limited to an analy-
 1354 sis of the frequency of communication or the transmitted workload.

1355

1356 5.3 Component levelling

1357 FPR_CON: Communication concealing -----1

1358

1359 5.4 Management

1360 The following actions could be considered for the management functions in FMT:

- 1361 a. Definition of the interval in FPR_CON.1.2 if definable within the operational
 1362 phase of the TOE.

1363

1364 5.5 Audit

1365 There are no auditable events foreseen.

1366

1367 5.6 Communication concealing (FPR_CON.1)

1368 Hierarchical to: No other components.

1369 Dependencies: No dependencies.

1370	FPR_CON.1.1	The TSF shall enforce the [assignment: <i>information flow policy</i>] in order to ensure that no personally identifiable information (PII) can be obtained by an analysis of [assignment: <i>characteristics of the information flow that need to be concealed</i>].
1371		
1372		
1373		
1374		
1375	FPR_CON.1.2	The TSF shall connect to [assignment: <i>list of external entities</i>] in intervals as follows [selection: <i>weekly, daily, hourly, [assignment: <i>other interval</i>]] to conceal the data flow.</i>
1376		
1377		
1378		

1379 6 Security Requirements

1380 6.1 Overview

1381 This chapter describes the security functional and the assurance requirements which
 1382 have to be fulfilled by the TOE. Those requirements comprise functional components
 1383 from part 2 of [CC] and the assurance components as defined for the Evaluation Assur-
 1384 ance Level 4 from part 3 of [CC].

1385 The following notations are used:

- 1386 • **Refinement** operation (denoted by **bold text**): is used to add details to a re-
 1387 quirement, and thus further restricts a requirement. In case that a word has
 1388 been deleted from the original text this refinement is indicated by crossed out
 1389 ~~bold text~~.
- 1390 • **Selection** operation (denoted by underlined text): is used to select one or more
 1391 options provided by the [CC] in stating a requirement.
- 1392 • **Assignment** operation (denoted by *italicised text*): is used to assign a specific
 1393 value to an unspecified parameter, such as the length of a password.
- 1394 • **Iteration** operation: are identified with a suffix in the name of the SFR (e.g.
 1395 FDP_IFC.2/FW).

1396 It should be noted that the requirements in the following chapters are not necessarily be
 1397 ordered alphabetically. Where useful the requirements have been grouped.

1398 The following table summarises all TOE security functional requirements of this ST:

Class FAU: Security Audit	
FAU_ARP.1/SYS	Security alarms for system log
FAU_GEN.1/SYS	Audit data generation for system log
FAU_SAA.1/SYS	Potential violation analysis for system log
FAU_SAR.1/SYS	Audit review for system log
FAU_STG.4/SYS	Prevention of audit data loss for the system log
FAU_GEN.1/CON	Audit data generation for consumer log

FAU_SAR.1/CON	Audit review for consumer log
FAU_STG.4/CON	Prevention of audit data loss for the consumer log
FAU_GEN.1/CAL	Audit data generation for calibration log
FAU_SAR.1/CAL	Audit review for calibration log
FAU_STG.4/CAL	Prevention of audit data loss for the calibration log
FAU_GEN.2	User identity association
FAU_STG.2	Guarantees of audit data availability
Class FCO: Communication	
FCO_NRO.2	Enforced proof of origin
Class FCS: Cryptographic Support	
FCS_CKM.1/TLS	Cryptographic key generation for TLS
FCS_COP.1/TLS	Cryptographic operation for TLS
FCS_CKM.1/CMS	Cryptographic key generation for CMS
FCS_COP.1/CMS	Cryptographic operation for CMS
FCS_CKM.1/MTR	Cryptographic key generation for Meter communication encryption
FCS_COP.1/MTR	Cryptographic operation for Meter communication encryption
FCS_CKM.4	Cryptographic key destruction
FCS_COP.1/HASH	Cryptographic operation for Signatures
FCS_COP.1/MEM	Cryptographic operation for TSF and user data encryption

Class FDP: User Data Protection	
FDP_ACC.2	Complete Access Control
FDP_ACF.1	Security attribute based access control
FDP_IFC.2/FW	Complete information flow control for firewall
FDP_IFF.1/FW	Simple security attributes for Firewall
FDP_IFC.2/MTR	Complete information flow control for Meter information flow
FDP_IFF.1/MTR	Simple security attributes for Meter information
FDP_RIP.2	Full residual information protection
FDP_SDI.2	Stored data integrity monitoring and action
Class FIA: Identification and Authentication	
FIA_ATD.1	User attribute definition
FIA_AFL.1	Authentication failure handling
FIA_UAU.2	User authentication before any action
FIA_UAU.5	Multiple authentication mechanisms
FIA_UAU.6	Re-Authenticating
FIA_UID.2	User identification before any action
FIA_USB.1	User-subject binding
Class FMT: Security Management	
FMT_MOF.1	Management of security functions behaviour
FMT_SMF.1	Specification of Management Functions
FMT_SMR.1	Security roles

FMT_MSA.1/AC	Management of security attributes for Gateway access policy
FMT_MSA.3/AC	Static attribute initialisation for Gateway access policy
FMT_MSA.1/FW	Management of security attributes for Firewall policy
FMT_MSA.3/FW	Static attribute initialisation for Firewall policy
FMT_MSA.1/MTR	Management of security attributes for Meter policy
FMT_MSA.3/MTR	Static attribute initialisation for Meter policy
Class FPR: Privacy	
FPR_CON.1	Communication Concealing
FPR_PSE.1	Pseudonymity
Class FPT: Protection of the TSF	
FPT_FLS.1	Failure with preservation of secure state
FPT_RPL.1	Replay Detection
FPT_STM.1	Reliable time stamps
FPT_TST.1	TSF testing
FPT_PHP.1	Passive detection of physical attack
Class FTP: Trusted path/channels	
FTP_ITC.1/WAN	Inter-TSF trusted channel for WAN
FTP_ITC.1/MTR	Inter-TSF trusted channel for Meter
FTP_ITC.1/USR	Inter-TSF trusted channel for User

1399

Table 9: List of Security Functional Requirements

1400 **6.2 Class FAU: Security Audit**

1401 **6.2.1 Introduction**

1402 The TOE compliant to this Security Target shall implement three different audit logs as
 1403 defined in **OSP.Log** and **O.Log**. The following table provides an overview over the three
 1404 audit logs before the following chapters introduce the SFRs related to those audit logs.

	System-Log	Consumer-Log	Calibration-Log
Purpose	<ul style="list-style-type: none"> • Inform the Gateway Administrator about security relevant events • Log all events as defined by Common Criteria [CC] for the used SFR • Log all system relevant events on specific functionality • Automated alarms in case of a cumulation of certain events • Inform the Service Technician about the status of the Gateway 	<ul style="list-style-type: none"> • Inform the Consumer about all information flows to the WAN • Inform the Consumer about the Processing Profiles • Inform the Consumer about other metering data (not billing-relevant) • Inform the Consumer about all billing-relevant data needed to verify an invoice 	<ul style="list-style-type: none"> • Track changes that are relevant for the calibration of the TOE relevant data needed to verify an invoice
Data	<ul style="list-style-type: none"> • As defined by CC part 2 • Augmented by specific events for the security functions 	<ul style="list-style-type: none"> • Information about all information flows to the WAN • Information about the current and the previous Processing Profiles • Non-billing-relevant Meter Data • Information about the system status (including relevant errors) 	<ul style="list-style-type: none"> • Calibration relevant data only

		<ul style="list-style-type: none"> Billing-relevant data needed to verify an invoice 	
Access	<ul style="list-style-type: none"> Access by authorised Gateway Administrator and via IF_GW_WAN only Events may only be deleted by an authorised Gateway Administrator via IF_GW_WAN Read access by authorised Service Technician via IF_GW_SRV only 	<ul style="list-style-type: none"> Read access by authorised Consumer and via IF_GW_CON only to the data related to the current consumer 	<ul style="list-style-type: none"> Read access by authorised Gateway Administrator and via IF_GW_WAN only
Deletion	<ul style="list-style-type: none"> Ring buffer. The availability of data has to be ensured for a sufficient amount of time Overwriting old events is possible if the memory is full. 	<ul style="list-style-type: none"> Ring buffer. The availability of data has to be ensured for a sufficient amount of time. Overwriting old events is possible if the memory is full Retention period is set by authorised Gateway Administrator on request by consumer, data older than this are deleted. 	<ul style="list-style-type: none"> The availability of data has to be ensured over the lifetime of the TOE.

1405

Table 10: Overview over audit processes

1406	6.2.2 Security Requirements for the System Log	
1407	6.2.2.1 Security audit automatic response (FAU_ARP)	
1408	6.2.2.1.1 FAU_ARP.1/SYS: Security Alarms for system log	
1409	FAU_ARP.1.1/SYS	The TSF shall take <i>inform an authorised Gateway Administrator and create a log entry in the system log</i> ³³
1410		upon detection of a potential security violation.
1411		
1412	Hierarchical to:	No other components
1413	Dependencies:	FAU_SAA.1 Potential violation analysis
1414		
1415	6.2.2.2 Security audit data generation (FAU_GEN)	
1416	6.2.2.2.1 FAU_GEN.1/SYS: Audit data generation for system log	
1417	FAU_GEN.1.1/SYS	The TSF shall be able to generate an audit record of the
1418		following auditable events:
1419		a) Start-up and shutdown of the audit functions;
1420		b) All auditable events for the <u>basic</u> ³⁴ level of audit; and
1421		c) <i>other non privacy relevant auditable events: none</i> ³⁵ .
1422	FAU_GEN.1.2/SYS	The TSF shall record within each audit record at least the
1423		following information:
1424		a) Date and time of the event, type of event, subject identity
1425		(if applicable), and the outcome (success or failure) of the
1426		event; and
1427		b) For each audit event type, based on the auditable event
1428		definitions of the functional components included in the
1429		PP/ST ³⁶ , <i>other audit relevant information: none</i> ³⁷ .

33 [assignment: *list of actions*]

56 [refinement: *PP/ST*]

57 [assignment: *other audit relevant information*]

Event / Parameter	Content
Commissioning	Commissioning of the SMGW MUST be logged in calibration log.
Event of self-test	Initiation of self-test MUST be logged in calibration log.
New meter	Connection and registration of a new meter MUST be logged in calibration log.
Meter removal	Removal of a meter from SMGW MUST be logged in calibration log.
Change of tarification profiles	<p>Every change (incl. parameter change) of a tarification profile according to [TR-03109-1, 4.4], provided the parameter is relevant for calibration regulations (see below) as well as new storage or removal of tarification profiles MUST be logged in calibration log.</p> <p>Parameter relevant for calibration regulations are:</p> <ul style="list-style-type: none"> • Device-ID of a meter - Unique identifier of the meter, which send the input values for a TAF • OBIS value of the measured variable of the meter - Unique value for the measured variable of the meter for the used TAF • Metering point name - Unique name of the metering point • Billing period - Period in which a billing should be done • Consumer ID • Validity period - Period for which the TAF is booked • Definition of tariff stages - Defines different tariff stages and associated OBIS values. Here it will be defined which tariff stage is valid at the time of rule set activation • Tariff switching time - Defines to the split second the switching of tariff stages. The time points can be defined as periodic values • Register period - Time distance of two consecutive measured value acquisitions for meter readings

Change of meter profiles	<p>Every change (incl. parameter change) of a meter profile according to [TR-03109-1, 4.4], provided the parameter is relevant for calibration regulations (see below) as well as new storage or removal of meter profiles MUST be logged in calibration log.</p> <p>Parameter relevant for legal metrology are:</p> <ul style="list-style-type: none"> • Device-ID - Unique identifier of the meter according to DIN 43863-5 • Key material - Public key for inner signature (dependent on the used meter in LMN) • Register period - Interval during receipt of meter values • Displaying interval ('Anzeigeintervall') - Interval during which the actual meter value (only during display) must be updated in case of bidirectional communication between meter and SMGW • Balancing ('Saldierend') - Determines if the meter is balancing ('saldierend') and meter values can grow and fall • OBIS values - OBIS values according to IEC-62056-6-1 resp. EN 13757-1 • Converter factor ('Wandlerfaktor') - Value is 1 in case of directly connected meter. In usage of converter counter ('Wandlerzähler') the value may be different.
Software update	Every update of the code which touches calibration regulations (serialized COSEM-objects, rules) MUST be logged in calibration log.
Firmware update	Every firmware update (incl. operating system update if applicable) MUST be logged in calibration log.
Error messages of a meter	<p>All FATAL messages of a connected meter MUST be logged in calibration log according to</p> <p>0 - no error</p> <p>1 - Warning, no action to be done according to calibration authority, meter value valid</p>

	<p>2 - Temporal error, send meter value will be marked as invalid, the value in meter field ('Messwertfeld') could be used according to the rules of [VDE4400] resp. [G865] as replacement value ('Ersatzwert') in backend.</p> <p>3 - Temporal error, send meter value is invalid; the value in the meter field ('Messwertfeld') cannot be used as replacement value in backend.</p> <p>4 - Fatal error (meter defect), actual send value is invalid and all future values will be invalid. including the device-ID.</p>
<p>Error messages of a SMGW</p>	<p>All self-test and calibration regulations relevant errors MUST be logged in calibration log.</p>

1543

Table 12: Content of calibration log

1544

1545	6.2.4.2 Security audit review (FAU_SAR)	
1546	6.2.4.2.1 FAU_SAR.1/CAL: Audit Review for the calibration log	
1547	FAU_SAR.1.1/CAL	The TSF shall provide <i>only authorised Gateway Administrators via the IF_GW_WAN interface</i> ⁵⁸ with the capability to read <i>all information</i> ⁵⁹ from the calibration audit records ⁶⁰ .
1548		
1549		
1550		
1551	FAU_SAR.1.2/CAL	The TSF shall provide the audit records in a manner suitable for the user to interpret the information.
1552		
1553	Hierarchical to:	No other components
1554	Dependencies:	FAU_GEN.1
1555	6.2.4.3 Security audit event storage (FAU_STG)	
1556	6.2.4.3.1 FAU_STG.4/CAL: Prevention of audit data loss for calibration log	
1557		
1558	FAU_STG.4.1/CAL	The TSF shall <u>ignore audited events</u> ⁶¹ and <i>stop the operation of the TOE and inform a Gateway Administrator</i> ⁶² if the calibration audit trail ⁶³ is full.
1559		
1560		
1561	Hierarchical to:	FAU_STG.3 Action in case of possible audit data loss
1562	Dependencies:	FAU_STG.1 Protected audit trail storage
1563	Application Note 8:	As outlined in the introduction it has to be ensured that the events of the calibration log are available over the lifetime of the TOE.
1564		
1565		

58 [assignment: *authorised users*]

59 [assignment: *list of audit information*]

60 [refinement: *audit records*]

1577	6.2.5.2 Security audit event storage (FAU_STG)	
1578	6.2.5.2.1 FAU_STG.2: Guarantees of audit data availability	
1579	FAU_STG.2.1	The TSF shall protect the stored audit records in the all
1580		audit trails ⁶⁴ from unauthorised deletion.
1581	FAU_STG.2.2	The TSF shall be able to <u>prevent</u> ⁶⁵ unauthorised
1582		modifications to the stored audit records in the all audit
1583		trails ⁶⁶ .
1584	FAU_STG.2.3	The TSF shall ensure that <i>all</i> ⁶⁷ stored audit records will be
1585		maintained when the following conditions occur: <u>audit</u>
1586		<u>storage exhaustion or failure</u> ⁶⁸ .
1587	Hierarchical to:	FAU_STG.1 Protected audit trail storage
1588	Dependencies:	FAU_GEN.1
1589	Application Note 10:	Please note that FAU_STG.2 applies to all audit logs, the
1590		system log, the calibration log, and the consumer log.

64 [refinement: *audit trail*]

65 [selection, choose one of: *prevent, detect*]

66 [refinement: *audit trail*]

67 [assignment: *metric for saving audit records*]

68 [selection: *audit storage exhaustion, failure, attack*]

1591 6.3 Class FCO: Communication

1592 6.3.1 Non-repudiation of origin (FCO_NRO)

1593 6.3.1.1 FCO_NRO.2: Enforced proof of origin

1594 FCO_NRO.2.1 The TSF shall enforce the generation of evidence of origin
1595 for transmitted *Meter Data*⁶⁹ at all times.

1596 FCO_NRO.2.2 The TSF shall be able to relate the *key material used for*
1597 *signature*^{70, 71} of the originator of the information, and the
1598 *signature*⁷² of the information to which the evidence
1599 applies.

1600 FCO_NRO.2.3 The TSF shall provide a capability to verify the evidence of
1601 origin of information to recipient, Consumer⁷³ given
1602 *limitations of the digital signature according to TR-03109-*
1603 *1*⁷⁴.

1604 Hierarchical to: FCO_NRO.1 Selective proof of origin

1605 Dependencies: FIA_UID.1 Timing of identification

1606 **Application Note 11:** FCO_NRO.2 requires that the TOE calculates a signature
1607 over Meter Data that is submitted to external entities.

1608 Therefore, the TOE has to create a hash value over the
1609 Data To Be Signed (DTBS) as defined in
1610 FCS_COP.1/HASH. The creation of the actual signature
1611 however is performed by the Security Module.

69 [assignment: *list of information types*]

70 [assignment: *list of attributes*]

71 The key material here also represents the identity of the Gateway.

72 [assignment: *list of information fields*]

73 [selection: *originator, recipient, [assignment: list of third parties]*]

74 [assignment: *limitations on the evidence of origin*]

1612 6.4 Class FCS: Cryptographic Support

1613 6.4.1 Cryptographic support for TLS

1614 6.4.1.1 Cryptographic key management (FCS_CKM)

1615 6.4.1.1.1 **FCS_CKM.1/TLS: Cryptographic key generation for TLS**

1616 FCS_CKM.1.1/TLS The TSF shall generate cryptographic keys in accordance
 1617 with a specified cryptographic key generation algorithm
 1618 *TLS-PRF with SHA-256 or SHA-384*⁷⁵ and specified
 1619 cryptographic key sizes *128 bit, 256 bit or 384 bit*⁷⁶ that
 1620 meet the following: *[RFC 5246] in combination with*
 1621 *[FIPS Pub. 180-4] and [RFC 2104]*⁷⁷.

1622 Hierarchical to: No other components.

1623 Dependencies: [FCS_CKM.2 Cryptographic key distribution, or
 1624 FCS_COP.1 Cryptographic operation], fulfilled by
 1625 FCS_COP.1/TLS

1626 FCS_CKM.4 Cryptographic key destruction

1627 **Application Note 12:** The Security Module is used for the generation of random
 1628 numbers and for all cryptographic operations with the pri-
 1629 vate key of a TLS certificate.

1630 **Application Note 13:** The TOE uses only cryptographic specifications and
 1631 algorithms as described in [TR-03109-3].

1632 6.4.1.2 Cryptographic operation (FCS_COP)

1633 6.4.1.2.1 **FCS_COP.1/TLS: Cryptographic operation for TLS**

1634 FCS_COP.1.1/TLS The TSF shall perform *TLS encryption, decryption, and*
 1635 *integrity protection*⁷⁸ in accordance with a specified
 1636 cryptographic algorithm *TLS cipher suites*

75 [assignment: *key generation algorithm*]

76 [assignment: *cryptographic key sizes*]

77 [assignment: *list of standards*]

78 [assignment: *list of cryptographic operations*]

1637		<i>TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256,</i>
1638		<i>TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384,</i>
1639		<i>TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256,</i>
1640		<i>and</i>
1641		<i>TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384</i>
1642		⁷⁹ <i>using elliptic curves BrainpoolP256r1, BrainpoolP384r1,</i>

86 [assignment: *cryptographic key sizes*]

1684		<i>[NIST 800-38D], [RFC 4493], [RFC 5084], and [RFC 5652]</i>
1685		<i>in combination with [NIST 800-38A]⁸⁷.</i>
1686	Hierarchical to:	No other components.
1687	Dependencies:	[FDP_ITC.1 Import of user data without security attributes,
1688		or
1689		FDP_ITC.2 Import of user data with security attributes, or
1690		FCS_CKM.1 Cryptographic key generation], fulfilled by
1691		FCS_CKM.1/CMS
1692		FCS_CKM.4 Cryptographic key destruction
1693	Application Note 17:	The TOE uses only cryptographic specifications and
1694		algorithms as described in [TR-03109-3].
1695	6.4.3 Cryptographic support for Meter communication encryption	
1696	6.4.3.1 Cryptographic key management (FCS_CKM)	
1697	6.4.3.1.1 FCS_CKM.1/MTR: Cryptographic key generation for Meter	
1698	communication (symmetric encryption)	
1699	FCS_CKM.1.1/MTR	The TSF shall generate cryptographic keys in accordance
1700		with a specified cryptographic key generation algorithm
1701		<i>AES-CMAC⁸⁸ and specified cryptographic key sizes 128</i>
1702		<i>bit⁸⁹ that meet the following: [FIPS Pub. 197], and</i>
1703		<i>[RFC 4493]⁹⁰.</i>
1704	Hierarchical to:	No other components.
1705	Dependencies:	[FCS_CKM.2 Cryptographic key distribution, or
1706		FCS_COP.1 Cryptographic operation], fulfilled by
1707		FCS_COP.1/MTR
1708		FCS_CKM.4 Cryptographic key destruction

87 [assignment: *list of standards*]

88 [assignment: *cryptographic key generation algorithm*]

89 [assignment: *cryptographic key sizes*]

90 [assignment: *list of standards*]

1709	Application Note 18:	The TOE uses only cryptographic specifications and
1710		algorithms as described in [TR-03109-3].
1711		6.4.3.2 Cryptographic operation (FCS_COP)
1712	6.4.3.2.1 FCS_COP.1/MTR: Cryptographic operation for Meter	
1713	communication encryption	
1714	FCS_COP.1.1/MTR	The TSF shall perform symmetric encryption, decryption,
1715		integrity protection ⁹¹ in accordance with a specified
1716		cryptographic algorithm AES-CBC-CMAC ⁹² and
1717		cryptographic key sizes 128 bit ⁹³ that meet the following:
1718		[FIPS Pub. 197] and [RFC 4493] in combination with
1719		[ISO 10116] ⁹⁴ .
1720	Hierarchical to:	No other components.
1721	Dependencies:	[FDP_ITC.1 Import of user data without security attributes,
1722		or
1723		FDP_ITC.2 Import of user data with security attributes, or
1724		FCS_CKM.1 Cryptographic key generation], fulfilled by
1725		FCS_CKM.1/MTR
1726		FCS_CKM.4 Cryptographic key destruction
1727	Application Note 19:	The ST allows different scenarios of key generation for
1728		Meter communication encryption. Those are:
1729		1. If a TLS encryption is being used, the key
1730		generation/negotiation is as defined by
1731		FCS_CKM.1/TLS.
1732		2. If AES encryption is being used, the key has been
1733		brought into the Gateway via a management
1734		function during the pairing process for the Meter

91 [assignment: *list of cryptographic operations*]

92 [assignment: *cryptographic algorithm*]

93 [assignment: *cryptographic key sizes*]

94 [assignment: *list of standards*]

1735 (see FMT_SMF.1) as defined by
1736 FCS_COP.1/MTR.

1737 **Application Note 20:** If the connection between the Meter and TOE is
1738 unidirectional, the communication between the Meter and
1739 the TOE is secured by the use of a symmetric AES
1740 encryption. If a bidirectional connection between the Meter
1741 and the TOE is established, the communication is secured
1742 by a TLS channel as described in chapter 6.4.1. As the
1743 TOE shall be interoperable with all kind of Meters, both
1744 kinds of encryption are implemented.

1745 **Application Note 21:** The TOE uses only cryptographic specifications and
1746 algorithms as described in [TR-03109-3].

1747 **6.4.4 General Cryptographic support**

1748 6.4.4.1 Cryptographic key management (FCS_CKM)

1749 **6.4.4.1.1 FCS_CKM.4: Cryptographic key destruction**

1750 FCS_CKM.4.1 The TSF shall destroy cryptographic keys in accordance
1751 with a specified cryptographic key destruction method
1752 *Zeroisation*⁹⁵ that meets the following: *none*⁹⁶.

1753 Hierarchical to: No other components.

1754 Dependencies: [FDP_ITC.1 Import of user data without security attributes,
1755 or

1756 FDP_ITC.2 Import of user data with security attributes, or
1757 FCS_CKM.1 Cryptographic key generation], fulfilled by
1758 FCS_CKM.1/TLS and

1759 FCS_CKM.1/CMS and FCS_CKM.1/MTR

1760 **Application Note 22:** Please note that as against the requirement FDP_RIP.2,
1761 the mechanisms implementing the requirement from
1762 FCS_CKM.4 shall be suitable to avoid attackers with

95 [assignment: *cryptographic key destruction method*]

96 [assignment: *list of standards*]

1763		physical access to the TOE from accessing the keys after
1764		they are no longer used.
1765	6.4.4.2 Cryptographic operation (FCS_COP)	
1766	6.4.4.2.1 FCS_COP.1/HASH: Cryptographic operation, hashing for	
1767	signatures	
1768	FCS_COP.1.1/HASH	The TSF shall perform <i>hashing for signature creation and</i>
1769		<i>verification</i> ⁹⁷ in accordance with a specified cryptographic
1770		algorithm <i>SHA-256, SHA-384 and SHA-512</i> ⁹⁸ and
1771		cryptographic key sizes <i>none</i> ⁹⁹ that meet the following:
1772		<i>[FIPS Pub. 180-4]</i> ¹⁰⁰ .
1773	Hierarchical to:	No other components.
1774	Dependencies:	[FDP_ITC.1 Import of user data without security attributes,
1775		or
1776		FDP_ITC.2 Import of user data with security attributes, or
1777		FCS_CKM.1 Cryptographic key generation ¹⁰¹]
1778		FCS_CKM.4 Cryptographic key destruction
1779	Application Note 23:	The TOE is only responsible for hashing of data in the
1780		context of digital signatures. The actual signature
1781		operation and the handling (i.e. protection) of the
1782		cryptographic keys in this context is performed by the
1783		Security Module.
1784	Application Note 24:	The TOE uses only cryptographic specifications and
1785		algorithms as described in [TR-03109-3].

97 [assignment: *list of cryptographic operations*]

98 [assignment: *cryptographic algorithm*]

99 [assignment: *cryptographic key sizes*]

100 [assignment: *list of standards*]

101 The justification for the missing dependency FCS_CKM.1 can be found in chapter 6.12.1.3.

1786 **6.4.4.2.2 FCS_COP.1/MEM: Cryptographic operation, encryption of**
 1787 **TSF and user data**

1788 FCS_COP.1.1/MEM The TSF shall perform *TSF and user data encryption and*
 1789 *decryption* ¹⁰² in accordance with a specified cryptographic
 1790 algorithm *AES-XTS* ¹⁰³ and cryptographic key sizes *128*
 1791 *bit* ¹⁰⁴ that meet the following: [*FIPS Pub. 197*] and
 1792 [*NIST 800-38E*] ¹⁰⁵.

1793 Hierarchical to: No other components.

1794 Dependencies: [FDP_ITC.1 Import of user data without security attributes,
 1795 or

1796 FDP_ITC.2 Import of user data with security attributes, or

1797 FCS_CKM.1 Cryptographic key generation], not fulfilled s.
 1798 Application Note 25

1799 FCS_CKM.4 Cryptographic key destruction

1800 **Application Note 25:** Please note that for the key generation process an external
 1801 security module is used during TOE production.

1802 **Application Note 26:** The TOE encrypts its local TSF and user data while it is
 1803 not in use (i.e. while stored in a persistent memory).

1804 It shall be noted that this kind of encryption cannot provide
 1805 an absolute protection against physical manipulation and
 1806 does not aim to. It however contributes to the security
 1807 concept that considers the protection that is provided by
 1808 the environment.

103 [assignment: *cryptographic algorithm*]

104 [assignment: *cryptographic key sizes*]

105 [assignment: *list of standards*]

1809 6.5 Class FDP: User Data Protection

1810 6.5.1 Introduction to the Security Functional Policies

1811 The security functional requirements that are used in the following chapters implicitly
 1812 define a set of Security Functional Policies (SFP). These policies are introduced in the
 1813 following paragraphs in more detail to facilitate the understanding of the SFRs:

- 1814 • The **Gateway access SFP** is an access control policy to control the access to
 1815 objects under the control of the TOE. The details of this access control policy
 1816 highly depend on the concrete application of the TOE. The access control policy
 1817 is described in more detail in [TR-03109-1].
- 1818 • The **Firewall SFP** implements an information flow policy to fulfil the objective
 1819 O.Firewall. All requirements around the communication control that the TOE
 1820 poses on communications between the different networks are defined in this
 1821 policy.
- 1822 • The **Meter SFP** implements an information flow policy to fulfil the objective
 1823 O.Meter. It defines all requirements concerning how the TOE shall handle Meter
 1824 Data.

1825 6.5.2 Gateway Access SFP

1826 6.5.2.1 Access control policy (FDP_ACC)

1827 6.5.2.1.1 FDP_ACC.2: Complete access control

1828 FDP_ACC.2.1 The TSF shall enforce the *Gateway access SFP*¹⁰⁶ on
 1829 *subjects: external entities in WAN, HAN and LMN*
 1830 *objects: any information that is sent to, from or via*
 1831 *the TOE and any information that is stored in the*
 1832 *TOE*¹⁰⁷ and all operations among subjects and
 1833 objects covered by the SFP.

1834 FDP_ACC.2.2 The TSF shall ensure that all operations between any
 1835 subject controlled by the TSF and any object controlled by
 1836 the TSF are covered by an access control SFP.

106 [assignment: *access control SFP*]

107 [assignment: *list of subjects and objects*]

1837	Hierarchical to:	FDP_ACC.1 Subset access control
1838	Dependencies:	FDP_ACF.1 Security attribute based access control
1839	6.5.2.1.2 FDP_ACF.1: Security attribute based access control	
1840	FDP_ACF.1.1	The TSF shall enforce the <i>Gateway access SFP</i> ¹⁰⁸ to
1841		objects based on the following:
1842		<i>subjects: external entities on the WAN, HAN or</i>
1843		<i>LMN side</i>
1844		<i>objects: any information that is sent to, from or via</i>
1845		<i>the TOE</i>
1846		<i>attributes: destination interface</i> ¹⁰⁹ .
1847	FDP_ACF.1.2	The TSF shall enforce the following rules to determine if
1848		an operation among controlled subjects and controlled
1849		objects is allowed:
1850		• <i>an authorised Consumer is only allowed to have</i>
1851		<i>read access to his own User Data via the interface</i>
1852		<i>IF_GW_CON,</i>
1853		• <i>an authorised Service Technician is only allowed to</i>
1854		<i>have read access to the system log via the interface</i>
1855		<i>IF_GW_SRV, the Service Technician must not be</i>
1856		<i>allowed to read, modify or delete any other TSF</i>
1857		<i>data,</i>
1858		• <i>an authorised Gateway Administrator is allowed to</i>
1859		<i>interact with the TOE only via IF_GW_WAN,</i>
1860		• <i>only authorised Gateway Administrators are</i>
1861		<i>allowed to establish a wake-up call,</i>
1862		• <i>additional rules governing access among controlled</i>
1863		<i>subjects and controlled objects using controlled</i>

¹⁰⁸ [assignment: *access control SFP*]

¹⁰⁹ [assignment: *list of subjects and objects controlled under the indicated SFP, and for each, the SFP-relevant security attributes, or named groups of SFP-relevant security attributes*]

1864		<i>operations on controlled objects or none:</i>
1865		<i>none</i> ^{110, 111}
1866	FDP_ACF.1.3	The TSF shall explicitly authorise access of subjects to
1867		objects based on the following additional rules: <i>none</i> ¹¹² .
1868	FDP_ACF.1.4	The TSF shall explicitly deny access of subjects to objects
1869		based on the following additional rules:
1870		• <i>the Gateway Administrator is not allowed to read</i>
1871		<i>consumption data or the Consumer Log,</i>
1872		• <i>nobody must be allowed to read the symmetric</i>
1873		<i>keys used for encryption</i> ¹¹³ .
1874	Hierarchical to:	No other components
1875	Dependencies:	FDP_ACC.1 Subset access control
1876		FMT_MSA.3 Static attribute initialisation
1877	6.5.3 Firewall SFP	
1878	6.5.3.1 Information flow control policy (FDP_IFC)	
1879	6.5.3.1.1 FDP_IFC.2/FW: Complete information flow control for	
1880	firewall	
1881	FDP_IFC.2.1/FW	The TSF shall enforce the <i>Firewall SFP</i> ¹¹⁴ on <i>the TOE,</i>
1882		<i>external entities on the WAN side, external entities on the</i>
1883		<i>LAN side and all information flowing between them</i> ¹¹⁵ and
1884		all operations that cause that information to flow to and
1885		from subjects covered by the SFP.

110 [assignment: *additional rules governing access among controlled subjects and controlled objects using controlled operations on controlled objects or none*]

111 [assignment: *rules governing access among controlled subjects and controlled objects using controlled operations on controlled objects*]

112 [assignment: *rules, based on security attributes, that explicitly authorise access of subjects to objects*]

113 [assignment: *rules, based on security attributes, that explicitly deny access of subjects to objects*]

114 [assignment: *information flow control SFP*]

115 [assignment: *list of subjects and information*]

1886 FDP_IFC.2.2/FW The TSF shall ensure that all operations that cause any
 1887 information in the TOE to flow to and from any subject in
 1888 the TOE are covered by an information flow control SFP.

1889 Hierarchical to: FDP_IFC.1 Subset information flow control

1890 Dependencies: FDP_IFF.1 Simple security attributes

1891 6.5.3.2 Information flow control functions (FDP_IFF)

1892 **6.5.3.2.1 FDP_IFF.1/FW: Simple security attributes for Firewall**

1893 FDP_IFF.1.1/FW The TSF shall enforce the *Firewall SFP*¹¹⁶ based on the
 1894 following types of subject and information security
 1895 attributes:

1896 *subjects: The TOE and external entities on the*
 1897 *WAN, HAN or LMN side*

1898 *information: any information that is sent to, from or*
 1899 *via the TOE*

1900 *attributes: destination_interface (TOE, LMN, HAN*
 1901 *or WAN), source_interface (TOE, LMN, HAN or*
 1902 *WAN), destination_authenticated,*
 1903 *source_authenticated*¹¹⁷.

1904 FDP_IFF.1.2/FW The TSF shall permit an information flow between a
 1905 controlled subject and controlled information via a
 1906 controlled operation if the following rules hold:

1907 *(if source_interface=HAN or*
 1908 *source_interface=TOE) and*

1909 *destination_interface=WAN and*

1910 *destination_authenticated = true*

1911 *Connection establishment is allowed*
 1912

116 [assignment: *information flow control SFP*]

117 [assignment: *list of subjects and information controlled under the indicated SFP, and for each, the security attributes*]

1913		<i>if source_interface=LMN and</i>
1914		<i>destination_interface= TOE and</i>
1915		<i>source_authenticated = true</i>
1916		<i>Connection establishment is allowed</i>
1917		
1918		<i>if source_interface=TOE and</i>
1919		<i>destination_interface= LMN and</i>
1920		<i>destination_authenticated = true</i>
1921		<i>Connection establishment is allowed</i>
1922		
1923		<i>if source_interface=HAN and</i>
1924		<i>destination_interface= TOE and</i>
1925		<i>source_authenticated = true</i>
1926		<i>Connection establishment is allowed</i>
1927		
1928		<i>if source_interface=TOE and</i>
1929		<i>destination_interface= HAN and</i>
1930		<i>destination_authenticated = true</i>
1931		<i>Connection establishment is allowed</i>
1932		<i>else</i>
1933		<i>Connection establishment is denied</i> ¹¹⁸ .
1934	FDP_IFF.1.3/FW	The TSF shall enforce the <i>establishment of a connection</i>
1935		<i>to a configured external entity in the WAN after having</i>
1936		<i>received a wake-up message on the WAN interface</i> ¹¹⁹ .

¹¹⁸ [assignment: *for each operation, the security attribute-based relationship that must hold between subject and information security attributes*]

¹¹⁹ [assignment: *additional information flow control SFP rules*]

1937	FDP_IFF.1.4/FW	The TSF shall explicitly authorise an information flow
1938		based on the following rules: <i>none</i> ¹²⁰ .
1939	FDP_IFF.1.5/FW	The TSF shall explicitly deny an information flow based on
1940		the following rules: <i>none</i> ¹²¹ .
1941	Hierarchical to:	No other components
1942	Dependencies:	FDP_IFC.1 Subset information flow control
1943		FMT_MSA.3 Static attribute initialisation
1944	Application Note 27:	It should be noted that the FDP_IFF.1.1/FW facilitates
1945		different interfaces of the origin and the destination of an
1946		information flow implicitly requires the TOE to implement
1947		physically separate ports for WAN, LMN and HAN.
1948	6.5.4 Meter SFP	
1949	6.5.4.1 Information flow control policy (FDP_IFC)	
1950	6.5.4.1.1 FDP_IFC.2/MTR: Complete information flow control for	
1951	Meter information flow	
1952	FDP_IFC.2.1/MTR	The TSF shall enforce the <i>Meter SFP</i> ¹²² on <i>the TOE,</i>
1953		<i>attached Meters, authorized External Entities in the WAN</i>
1954		<i>and all information flowing between them</i> ¹²³ and all
1955		operations that cause that information to flow to and from
1956		subjects covered by the SFP.
1957	FDP_IFC.2.2/MTR	The TSF shall ensure that all operations that cause any
1958		information in the TOE to flow to and from any subject in
1959		the TOE are covered by an information flow control SFP.
1960	Hierarchical to:	FDP_IFC.1 Subset information flow control
1961	Dependencies:	FDP_IFF.1 Simple security attributes

¹²⁰ [assignment: *rules, based on security attributes, that explicitly authorise information flows*]

1962	6.5.4.2 Information flow control functions (FDP_IFF)	
1963	6.5.4.2.1 FDP_IFF.1/MTR: Simple security attributes for Meter	
1964	information	
1965	FDP_IFF.1.1/MTR	The TSF shall enforce the <i>Meter SFP</i> ¹²⁴ based on the
1966		following types of subject and information security
1967		attributes:
1968		<ul style="list-style-type: none"> • <i>subjects: TOE, external entities in WAN, Meters located in LMN</i>
1969		
1970		<ul style="list-style-type: none"> • <i>information: any information that is sent via the TOE</i>
1971		
1972		<ul style="list-style-type: none"> • <i>attributes: destination interface, source interface (LMN or WAN), Processing Profile</i>¹²⁵.
1973		
1974	FDP_IFF.1.2/MTR	The TSF shall permit an information flow between a
1975		controlled subject and controlled information via a
1976		controlled operation if the following rules hold:
1977		<ul style="list-style-type: none"> • <i>an information flow shall only be initiated if allowed by a corresponding Processing Profile</i>¹²⁶.
1978		
1979	FDP_IFF.1.3/MTR	The TSF shall enforce the following rules:
1980		<ul style="list-style-type: none"> • Data received from Meters shall be processed as defined in the corresponding Processing Profiles,
1981		
1982		<ul style="list-style-type: none"> • Results of processing of Meter Data shall be submitted to external entities as defined in the Processing Profiles,
1983		
1984		<ul style="list-style-type: none"> • The internal system time shall be synchronised as follows:
1985		
1986		

124 [assignment: *information flow control SFP*]

125 [assignment: *list of subjects and information controlled under the indicated SFP, and for each, the security attributes*]

126 [assignment: *for each operation, the security attribute-based relationship that must hold between subject and information security attributes*]

1987			○ <i>The TOE shall compare the system time to a</i>
1988			<i>reliable external time source every 24</i>
1989			<i>hours</i> ¹²⁷ .
1990			○ <i>If the deviation between the local time and the</i>
1991			<i>remote time is acceptable</i> ¹²⁸ , <i>the local system</i>
1992			<i>time shall be updated according to the remote</i>
1993			<i>time.</i>
1994			○ <i>If the deviation is not acceptable the TOE</i>
1995			<i>shall ensure that any following Meter Data is</i>
1996			<i>not used, stop operation</i> ¹²⁹ <i>and</i>
1997			<i>inform a Gateway Administrator</i> ¹³⁰ .
1998	FDP_IFF.1.4/MTR		The TSF shall explicitly authorise an information flow
1999			based on the following rules: <i>none</i> ¹³¹ .
2000	FDP_IFF.1.5/MTR		The TSF shall explicitly deny an information flow based on
2001			the following rules: <i>The TOE shall deny any acceptance of</i>
2002			<i>information by external entities in the LMN unless the</i>
2003			<i>authenticity, integrity and confidentiality of the Meter Data</i>
2004			<i>could be verified</i> ¹³² .
2005	Hierarchical to:		No other components
2006	Dependencies:		FDP_IFC.1 Subset information flow control
2007			FMT_MSA.3 Static attribute initialisation
2008	Application Note 28:		FDP_IFF.1.3 defines that the TOE shall update the local
2009			system time regularly with reliable external time sources if
2010			the deviation is acceptable. In the context of this
2011			functionality two aspects should be mentioned:

127 [assignment: *synchronization interval between 1 minute and 24 hours*]

128 Please refer to the following application note for a detailed definition of “acceptable”.

129 Please note that this refers to the complete functional operation of the TOE and not only to the update of local time. However, an administrative access shall still be possible.

130 [assignment: *additional information flow control SFP rules*]

131 [assignment: *rules, based on security attributes, that explicitly authorise information flows*]

132 [assignment: *rules, based on security attributes, that explicitly deny information flows*]

2012		Reliability of external source
2013		<p>There are several ways to achieve the reliability of the external source. On the one hand, there may be a source in the WAN that has an acceptable reliability on its own (e.g. because it is operated by a very trustworthy organisation (an official legal time issued by the calibration authority would be a good example for such a source¹³³)). On the other hand a developer may choose to maintain multiple external sources that all have a certain level of reliability but no absolute reliability. When using such sources the TOE shall contact more than one source and harmonize the results in order to ensure that no attack happened.</p>
2014		
2015		
2016		
2017		
2018		
2019		
2020		
2021		
2022		
2023		
2024		
2025		Acceptable deviation
2026		<p>For the question whether a deviation between the time source(s) in the WAN and the local system time is still acceptable, normative or legislative regulations shall be considered. If no regulation exists, a maximum deviation of 3% of the measuring period is allowed to be in conformance with [PP_GW]. It should be noted that depending on the kind of application a more accurate system time is needed. For doing so, the intervall for the comparison of the system time to a reliable external time source is configurable. But this aspect is not within the scope of this Security Target.</p>
2027		
2028		
2029		
2030		
2031		
2032		
2033		
2034		
2035		
2036		
2037		<p>Please further note that – depending on the exactness of the local clock – it may be required to synchronize the time more often than every 24 hours.</p>
2038		
2039		<p>In FDP_1FF.1.5/MTR the TOE is required to verify the authenticity, integrity and confidentiality of the Meter Data</p>
2040	Application Note 29:	
2041		

¹³³ By the time that this ST is developed however, this time source is not yet available.

2042 received from the Meter. The TOE has two options to do
2043 so:

- 2044 1. To implement a channel between the Meter and the
2045 TOE using the functionality as described in
2046 FCS_COP.1/TLS.
2047 2. To accept, decrypt and verify data that has been
2048 encrypted by the Meter as required in
2049 FCS_COP.1/MTR if a wireless connection to the
2050 meters is established.

2051 The latter possibility can be used only if a wireless
2052 connection between the Meter and the TOE is established.

2053 **6.5.5 General Requirements on user data protection**

2054 6.5.5.1 Residual information protection (FDP_RIP)

2055 **6.5.5.1.1 FDP_RIP.2: Full residual information protection**

2056 FDP_RIP.2.1 The TSF shall ensure that any previous information
2057 content of a resource is made unavailable upon the
2058 deallocation of the resource from ¹³⁴ all objects.

2059 Hierarchical to: FDP_RIP.1 Subset residual information protection

2060 Dependencies: No dependencies.

2061 **Application Note 30:** Please refer to chapter F.9 of part 2 of [CC] for more
2062 detailed information about what kind of information this
2063 requirement applies to.

2064 Please further note that this SFR has been used in order
2065 to ensure that information that is no longer used is made
2066 unavailable from a logical perspective. Specifically, it has
2067 to be ensured that this information is no longer available
2068 via an external interface (even if an access control or
2069 information flow policy would fail). However, this does not
2070 necessarily mean that the information is overwritten in a

134 [selection: *allocation of the resource to, deallocation of the resource from*]

2071 way that makes it impossible for an attacker to get access
 2072 to is assuming a physical access to the memory of the
 2073 TOE.

2074 6.5.5.2 Stored data integrity (FDP_SDI)

2075 **6.5.5.2.1 FDP_SDI.2: Stored data integrity monitoring and action**

2076 FDP_SDI.2.1 The TSF shall monitor user data stored in containers
 2077 controlled by the TSF for *integrity errors*¹³⁵ on all objects,
 2078 based on the following attributes: *cryptographical check*
 2079 *sum*¹³⁶.

2080 FDP_SDI.2.2 Upon detection of a data integrity error, the TSF shall
 2081 *create a system log entry*¹³⁷.

2082 Hierarchical to: FDP_SDI.1 Stored data integrity monitoring

2083 Dependencies: No dependencies.

2084 **6.6 Class FIA: Identification and Authentication**

2085 **6.6.1 User Attribute Definition (FIA_ATD)**

2086 6.6.1.1 FIA_ATD.1: User attribute definition

2087 FIA_ATD.1.1 The TSF shall maintain the following list of security
 2088 attributes belonging to individual users:

- 2089 • *User Identity*
- 2090 • *Status of Identity (Authenticated or not)*
- 2091 • *Connecting network (WAN, HAN or LMN)*
- 2092 • *Role membership*
- 2093 • *none*¹³⁸.

2094 Hierarchical to: No other components.

2095 Dependencies: No dependencies.

135 [assignment: *integrity errors*]

136 [assignment: *user data attributes*]

137 [assignment: *action to be taken*]

138 [assignment: *list of security attributes*]

2096	6.6.2 Authentication Failures (FIA_AFL)	
2097	6.6.2.1 FIA_AFL.1: Authentication failure handling	
2098	FIA_AFL.1.1	The TSF shall detect when <u>5</u> ¹³⁹ unsuccessful authentication attempts occur related to <i>authentication attempts at IF_GW_CON</i> ¹⁴⁰ .

- 2230 *FMT_SMF.1* Specification of Management Functions

Function	Limitation
Display the version number of the TOE Display the current time	The management functions must only be accessible for an authorised Consumer and only via the interface <i>IF_GW_CON</i> . An authorized Service Technician is also able to access the version number of the TOE and the current time of the TOE via interface <i>IF_GW_SRV</i> ¹⁵⁵ .
All other management functions as defined in <i>FMT_SMF.1</i>	The management functions must only be accessible for an authorised Gateway Administrator and only via the interface <i>IF_GW_WAN</i> ¹⁵⁶ .
Firmware Update	The firmware update must only be possible after the authenticity of the firmware update has been verified (using the services of the Security Module and the trust anchor of the Gateway developer) and if the version number of the new firmware is higher to the version of the installed firmware.
Deletion or modification of events from the Calibration Log	A deletion or modification of events from the calibration log must not be possible.

2231 **Table 13: Restrictions on Management Functions**

153 [assignment: *list of functions*]

154 [assignment: *the authorised identified roles*]

155 The TOE displays the version number of the TOE and the current time of the TOE also to the authorized service technician via the interface *IF_GW_SRV* because the service technician must be able to determine if the current time of the TOE is correct or if the version number of the TOE is correct.

156 This criterion applies to all management functions. The following entries in this table only augment this restriction further.

2232 6.7.1.2 Specification of Management Functions (FMT_SMF)

2233 **6.7.1.2.1 FMT_SMF.1: Specification of Management Functions**

2234 FMT_SMF.1.1 The TSF shall be capable of performing the following
 2235 management functions: *list of management functions as*
 2236 *defined in Table 14 and Table 15 and additional*
 2237 *functionalities: none*¹⁵⁷.

2238 Hierarchical to: No other components.

2239 Dependencies: No dependencies.

193 [assignment: *access control SFP, information flow control SFP*]

194 [selection, choose one of: *restrictive, permissive, [assignment: other property]*]

195 [assignment: *the authorised identified roles*]

196 [assignment: *information flow policy*]

197 [assignment: *characteristics of the information flow that need to be concealed*]

198 [assignment: *list of external entities*]

2344		follows <u>daily, other interval: none</u> ¹⁹⁹ to conceal the data
2345		flow ²⁰⁰ .
2346	Hierarchical to:	No other components.
2347	Dependencies:	No dependencies.
2348	6.8.2 Pseudonymity (FPR_PSE)	
2349	6.8.2.1 FPR_PSE.1 Pseudonymity	
2350	FPR_PSE.1.1	The TSF shall ensure that <i>external entities in the WAN</i> ²⁰¹
2351		are unable to determine the real user name bound to
2352		<i>information neither relevant for billing nor for a secure</i>
2353		<i>operation of the Grid sent to parties in the WAN</i> ²⁰² .
2354	FPR_PSE.1.2	The TSF shall be able to provide <i>aliases as defined by the</i>
2355		<i>Processing Profiles</i> ²⁰³ of the real user name for the
2356		Meter and Gateway identity ²⁰⁴ to <i>external entities in the</i>
2357		<i>WAN</i> ²⁰⁵ .
2358	FPR_PSE.1.3	The TSF shall <u>determine an alias for a user</u> ²⁰⁶ and verify
2359		that it conforms to the <i>alias given by the Gateway</i>
2360		<i>Administrator in the Processing Profile</i> ²⁰⁷ .
2361	Hierarchical to:	No other components.
2362	Dependencies:	No dependencies.
2363	Application Note 35:	When the TOE submits information about the consumption
2364		or production of a certain commodity that is not relevant for
2365		the billing process nor for a secure operation of the Grid,
2366		there is no need that this information is sent with a direct

199 [selection: *weekly, daily, hourly, [assignment: other interval]*]

200 The TOE uses a randomized value of about ±50 percent per delivery.

201 [assignment: *set of users and/or subjects*]

202 [assignment: *list of subjects and/or operations and/or objects*]

203 [assignment: *number of aliases*]

204 [refinement: *of the real user name*]

205 [assignment: *list of subjects*]

206 [selection, choose one of: *determine an alias for a user, accept the alias from the user*]

207 [assignment: *alias metric*]

2367 link to the identity of the consumer. In those cases, the
 2368 TOE shall replace the identity of the Consumer by a
 2369 pseudonymous identifier. Please note that the identity of
 2370 the Consumer may not be their name but could also be a
 2371 number (e.g. consumer ID) used for billing purposes.

2372 A Gateway may use more than one pseudonymous
 2373 identifier.

2374 A complete anonymisation would be beneficial in terms of
 2375 the privacy of the consumer. However, a complete
 2376 anonymous set of information would not allow the external
 2377 entity to ensure that the data comes from a trustworthy
 2378 source.

2379 Please note that an information flow shall only be initiated
 2380 if allowed by a corresponding Processing Profile.

2381

2382 **6.9 Class FPT: Protection of the TSF**

2383 **6.9.1 Fail secure (FPT_FLS)**

2384 6.9.1.1 FPT_FLS.1: Failure with preservation of secure state

2385 FPT_FLS.1.1 The TSF shall preserve a secure state when the following
 2386 types of failures occur:

- 2387 • *the deviation between local system time of the TOE*
- 2388 *and the reliable external time source is too large,*
- 2389 • *TOE hardware / firmware integrity violation or*
- 2390 • *TOE software application integrity violation* ²⁰⁸.

2391 Hierarchical to: No other components.

2392 Dependencies: No dependencies.

2393 **Application Note 36:** The local clock shall be as exact as required by normative
 2394 or legislative regulations. If no regulation exists, a

208 [assignment: *list of types of failures in the TSF*]

2395 maximum deviation of 3% of the measuring period is
 2396 allowed to be in conformance with [PP_GW].

2397 **6.9.2 Replay Detection (FPT_RPL)**

2398 6.9.2.1 FPT_RPL.1: Replay detection

2399 FPT_RPL.1.1 The TSF shall detect replay for the following entities: *all*
 2400 *external entities* ²⁰⁹.

2401 FPT_RPL.1.2 The TSF shall perform *ignore replayed data* ²¹⁰ when
 2402 replay is detected.

2403 Hierarchical to: No other components.

2404 Dependencies: No dependencies.

2405 **6.9.3 Time stamps (FPT_STM)**

2406 6.9.3.1 FPT_STM.1: Reliable time stamps

2407 FPT_STM.1.1 The TSF shall be able to provide reliable time stamps.

2408 Hierarchical to: No other components.

2409 Dependencies: No dependencies.

2410

2411 **6.9.4 TSF self test (FPT_TST)**

2412 6.9.4.1 FPT_TST.1: TSF testing

2413 FPT_TST.1.1 The TSF shall run a suite of self tests during initial startup,
 2414 at the request of a user and periodically during normal
 2415 operation ²¹¹ to demonstrate the correct operation of the
 2416 TSF ²¹².

209 [assignment: *list of identified entities*]

210 [assignment: *list of specific actions*]

211 [selection: *during initial start-up, periodically during normal operation, at the request of the authorised user, at the conditions*[assignment: *conditions under which self test should occur*]]

212 [selection: [assignment: *parts of TSF*], *the TSF*]

2417 FPT_TST.1.2 The TSF shall provide authorised users with the capability
 2418 to verify the integrity of TSF data ²¹³.

2419 FPT_TST.1.3 The TSF shall provide authorised users with the capability
 2420 to verify the integrity of TSF ²¹⁴.

2421 Hierarchical to: No other components.

2422 Dependencies: No dependencies.

2423 **6.9.5 TSF physical protection (FPT_PHP)**

2424 6.9.5.1 FPT_PHP.1: Passive detection of physical attack

2425 FPT_PHP.1.1 The TSF shall provide unambiguous detection of physical
 2426 tampering that might compromise the TSF.

2427 FPT_PHP.1.2 The TSF shall provide the capability to determine whether
 2428 physical tampering with the TSF's devices or TSF
 2429 elements has occurred.

2430 Hierarchical to: No other components.

2431 Dependencies: No dependencies.

2432

2433 **6.10 Class FTP: Trusted path/channels**

2434 **6.10.1 Inter-TSF trusted channel (FTP_ITC)**

2435 6.10.1.1 FTP_ITC.1/WAN: Inter-TSF trusted channel for WAN

2436 FTP_ITC.1.1/WAN The TSF shall provide a communication channel between
 2437 itself and another trusted IT product that is logically distinct
 2438 from other communication channels and provides assured
 2439 identification of its end points and protection of the channel
 2440 data from modification or disclosure.

213 [selection: [assignment: parts of TSF data], TSF data]

214 [selection: [assignment: parts of TSF], TSF]

2441	FTP_ITC.1.2/WAN	The TSF shall permit <u>the TSF</u> ²¹⁵ to initiate communication
2442		via the trusted channel.
2443	FTP_ITC.1.3/WAN	The TSF shall initiate communication via the trusted
2444		channel for <i>all communications to external entities in the</i>
2445		<i>WAN</i> ²¹⁶ .
2446	Hierarchical to:	No other components
2447	Dependencies:	No dependencies.
2448	6.10.1.2 FTP_ITC.1/MTR:	Inter-TSF trusted channel for Meter
2449	FTP_ITC.1.1/MTR	The TSF shall provide a communication channel between
2450		itself and another trusted IT product that is logically distinct
2451		from other communication channels and provides assured
2452		identification of its end points and protection of the channel
2453		data from modification or disclosure.
2454	FTP_ITC.1.2/MTR	The TSF shall permit the Meter and the TOE ²¹⁷ to initiate
2455		communication via the trusted channel.
2456	FTP_ITC.1.3/MTR	The TSF shall initiate communication via the trusted
2457		channel for <i>any communication between a Meter and the</i>
2458		<i>TOE</i> ²¹⁸ .
2459	Hierarchical to:	No other components.
2460	Dependencies:	No dependencies.
2461	Application Note 37:	The corresponding cryptographic primitives are defined by
2462		FCS_COP.1/MTR.
2463	6.10.1.3 FTP_ITC.1/USR:	Inter-TSF trusted channel for User
2464	FTP_ITC.1.1/USR	The TSF shall provide a communication channel between
2465		itself and another trusted IT product that is logically distinct
2466		from other communication channels and provides assured

²¹⁵ [selection: *the TSF, another trusted IT product*]

²¹⁶ [assignment: *list of functions for which a trusted channel is required*]

²¹⁷ [selection: *the TSF, another trusted IT product*]

²¹⁸ [assignment: *list of functions for which a trusted channel is required*]

2467 identification of its end points and protection of the channel
 2468 data from modification or disclosure.

2469 FTP_ITC.1.2/USR The TSF shall permit **the Consumer, the Service**
 2470 **Technician** ²¹⁹ to initiate communication via the trusted
 2471 channel.

2472 FTP_ITC.1.3/USR The TSF shall initiate communication via the trusted
 2473 channel for *any communication between a Consumer and*
 2474 *the TOE and the Service Technician and the TOE* ²²⁰.

2475 Hierarchical to: No other components.

2476 Dependencies: No dependencies.

2477

2478 6.11 Security Assurance Requirements for the TOE

2479 The minimum Evaluation Assurance Level for this Security Target is **EAL 4 augmented**
 2480 **by AVA_VAN.5 and ALC_FLR.2**. The following table lists the assurance components
 2481 which are therefore applicable to this ST.

Assurance Class	Assurance Component
Development	ADV_ARC.1
	ADV_FSP.4
	ADV_IMP.1
	ADV_TDS.3
Guidance documents	AGD_OPE.1
	AGD_PRE.1
Life-cycle support	ALC_CMC.4

219 [selection: *the TSF, another trusted IT product*]

220 [assignment: *list of functions for which a trusted channel is required*]

Assurance Class	Assurance Component
	ALC_CMS.4
	ALC_DEL.1
	ALC_DVS.1
	ALC_LCD.1
	ALC_TAT.1
	ALC_FLR.2
Security Target Evaluation	ASE_CCL.1
	ASE_ECD.1
	ASE_INT.1
	ASE_OBJ.2
	ASE_REQ.2
	ASE_SPD.1
	ASE_TSS.1
Tests	ATE_COV.2
	ATE_DPT.1
	ATE_FUN.1
	ATE_IND.2
Vulnerability Assessment	AVA_VAN.5

2483 **6.11.1 Refinement for ALC_DEL.1 for the following assurance elements**

2484 ALC_DEL.1.1D: The developer shall document and provide procedures for delivery of

2485 the TOE or parts of it to the **consumer MPO**.

2486 ALC_DEL.1.1C: The delivery documentation shall describe all procedures that are nec-

2487 essary to maintain security when distributing versions of the TOE to the **consumer MPO**.

2488 Application Note: "MPO" as the recipient of the TOE delivery is to be understood to also

2489 include service technicians or any other agent who act as a contractor on behalf of the

2490 MPO.

2491

2492 **6.12 Security Requirements rationale**

2493 **6.12.1 Security Functional Requirements rationale**

2494 6.12.1.1 Fulfilment of the Security Objectives

2495 This chapter proves that the set of security requirements (TOE) is suited to fulfil the

2496 security objectives described in chapter 4 and that each SFR can be traced back to the

2497 security objectives. At least one security objective exists for each security requirement.

	O.Firewall	O.SeparateIF	O.Conceal	O.Meter	O.Crypt	O.Time	O.Protect	O.Manage-	O.Log	O.Access

2498 **Table 17: Fulfilment of Security Objectives**

2499 The following paragraphs contain more details on this mapping.

2500 **6.12.1.1.1 O.Firewall**

2501 O.Firewall is met by a combination of the following SFRs:

- 2502 • **FDP_IFC.2/FW** defines that the TOE shall implement an information flow policy
- 2503 for its firewall functionality.
- 2504 • **FDP_IFF.1/FW** defines the concrete rules for the firewall information flow policy.

- 2505 • **FTP_ITC.1/WAN** defines the policy around the trusted channel to parties in the
2506 WAN.

2507 **6.12.1.1.2 O.SeparateIF**

2508 O.SeparateIF is met by a combination of the following SFRs:

- 2509 • **FDP_IFC.2/FW** and **FDP_IFF.1/FW** implicitly require the TOE to implement
2510 physically separate ports for WAN and LMN.
2511 • **FPT_TST.1** implements a self test that also detects whether the ports for WAN
2512 and LAN have been interchanged.

2513 **6.12.1.1.3 O.Conceal**

2514 O.Conceal is completely met by **FPR_CON.1** as directly follows.

2515 **6.12.1.1.4 O.Meter**

2516 O.Meter is met by a combination of the following SFRs:

- 2517 • **FDP_IFC.2/MTR** and **FDP_IFF.1/MTR** define an information flow policy to
2518 introduce how the Gateway shall handle Meter Data.
2519 • **FCO_NRO.2** ensure that all Meter Data will be signed by the Gateway (invoking
2520 the services of its Security Module) before being submitted to external entities.
2521 • **FPR_PSE.1** defines requirements around the pseudonymization of Meter
2522 identities for Status data.
2523 • **FTP_ITC.1/MTR** defines the requirements around the Trusted Channel that
2524 shall be implemented by the Gateway in order to protect information submitted
2525 via the Gateway and external entities in the WAN or the Gateway and a
2526 distributed Meter.

2527

2528 **6.12.1.1.5 O.Crypt**

2529 O.Crypt is met by a combination of the following SFRs:

- 2530 • **FCS_CKM.4** defines the requirements around the secure deletion of ephemeral
2531 cryptographic keys.
- 2532 • **FCS_CKM.1/TLS** defines the requirements on key negotiation for the TLS
2533 protocol.
- 2534 • **FCS_CKM.1/CMS** defines the requirements on key generation for symmetric
2535 encryption within CMS.
- 2536 • **FCS_COP.1/TLS** defines the requirements around the encryption and
2537 decryption capabilities of the Gateway for communications with external parties
2538 and to Meters.
- 2539 • **FCS_COP.1/CMS** defines the requirements around the encryption and
2540 decryption of content and administration data.
- 2541 • **FCS_CKM.1/MTR** defines the requirements on key negotiation for meter com-
2542 munication encryption.
- 2543 • **FCS_COP.1/MTR** defines the cryptographic primitives for meter
2544 communication encryption.
- 2545 • **FCS_COP.1/HASH** defines the requirements on hashing that are needed in the
2546 context of digital signatures (which are created and verified by the Security
2547 Module).
- 2548 • **FCS_COP.1/MEM** defines the requirements around the encryption of TSF data.
- 2549 • **FPT_RPL.1** ensures that a replay attack for communications with external
2550 entities is detected.

2551 **6.12.1.1.6 O.Time**

2552 O.Time is met by a combination of the following SFRs:

- 2553 • **FDP_IFC.2/MTR** and **FDP_IFF.1/MTR** define the required update functionality
2554 for the local time as part of the information flow control policy for handling Meter
2555 Data.
- 2556 • **FPT_STM.1** defines that the TOE shall be able to provide reliable time stamps.

2557

2558 **6.12.1.1.7 O.Protect**

2559 O.Protect is met by a combination of the following SFRs:

- 2560 • **FCS_COP.1/MEM** defines that the TOE shall encrypt its TSF and user data as
2561 long as it is not in use.
- 2562 • **FDP_RIP.2** defines that the TOE shall make information unavailable as soon
2563 as it is no longer needed.
- 2564 • **FDP_SDI.2** defines requirements around the integrity protection for stored data.
- 2565 • **FPT_FLS.1** defines requirements that the TOE falls back to a safe state for
2566 specific error cases.
- 2567 • **FPT_TST.1** defines the self testing functionality to detect whether the interfaces
2568 for WAN and LAN are separate.
- 2569 • **FPT_PHP.1** defines the exact requirements around the physical protection that
2570 the TOE has to provide.

2571 **6.12.1.1.8 O.Management**

2572 O.Management is met by a combination of the following SFRs:

- 2573 • **FIA_ATD.1** defines the attributes for users.
- 2574 • **FIA_AFL.1** defines the requirements if the authentication of users fails multiple
2575 times.
- 2576 • **FIA_UAU.2** defines requirements around the authentication of users.
- 2577 • **FIA_UID.2** defines requirements around the identification of users.
- 2578 • **FIA_USB.1** defines that the TOE must be able to associate users with subjects
2579 acting on behalf of them.
- 2580 • **FMT_MOF.1** defines requirements around the limitations for management of
2581 security functions.
- 2582 • **FMT_MSA.1/AC** defines requirements around the limitations for management
2583 of attributes used for the Gateway access SFP.
- 2584 • **FMT_MSA.1/FW** defines requirements around the limitations for management
2585 of attributes used for the Firewall SFP.
- 2586 • **FMT_MSA.1/MTR** defines requirements around the limitations for management
2587 of attributes used for the Meter SFP.
- 2588 • **FMT_MSA.3/AC** defines the default values for the Gateway access SFP.
- 2589 • **FMT_MSA.3/FW** defines the default values for the Firewall SFP.
- 2590 • **FMT_MSA.3/MTR** defines the default values for the Meter SFP.

- 2591
- **FMT_SMF.1** defines the management functionalities that the TOE must offer.
- 2592
- **FMT_SMR.1** defines the role concept for the TOE.

2593

6.12.1.1.9 O.Log

2594 O.Log defines that the TOE shall implement three different audit processes that are
2595 covered by the Security Functional Requirements as follows:

2596

System Log

2597 The implementation of the system log itself is covered by the use of **FAU_GEN.1/SYS**.
2598 **FAU_ARP.1/SYS** and **FAU_SAA.1/SYS** allow to define a set of criteria for automated
2599 analysis of the audit and a corresponding response. **FAU_SAR.1/SYS** defines the
2600 requirements around the audit review functions and that access to them shall be limited
2601 to authorised Gateway Administrators via the IF_GW_WAN interface and to authorised
2602 Service Technicians via the IF_GW_SRV interface. Finally, **FAU_STG.4/SYS** defines
2603 the requirements on what should happen if the audit log is full.

2604

Consumer Log

2605 The implementation of the consumer log itself is covered by the use of
2606 **FAU_GEN.1/CON**. **FAU_STG.4/CON** defines the requirements on what should happen
2607 if the audit log is full. **FAU_SAR.1/CON** defines the requirements around the audit review
2608 functions for the consumer log and that access to them shall be limited to authorised
2609 Consumer via the IF_GW_CON interface. **FTP_ITC.1/USR** defines the requirements on
2610 the protection of the communication of the Consumer with the TOE.

2611

Calibration Log

2612 The implementation of the calibration log itself is covered by the use of
2613 **FAU_GEN.1/CAL**. **FAU_STG.4/CAL** defines the requirements on what should happen
2614 if the audit log is full. **FAU_SAR.1/CAL** defines the requirements around the audit review
2615 functions for the calibration log and that access to them shall be limited to authorised
2616 Gateway Administrators via the IF_GW_WAN interface.

2617 **FAU_GEN.2**, **FAU_STG.2** and **FPT_STM.1** apply to all three audit processes.

2618

6.12.1.1.10 O.Access

2619 **FDP_ACC.2** and **FDP_ACF.1** define the access control policy as required to address
2620 O.Access. **FIA_UAU.5** ensures that entities that would like to communicate with the TOE
2621 are authenticated before any action whereby **FIA_UAU.6** ensures that external entities

2622 in the WAN are re-authenticated after the session key has been used for a certain
 2623 amount of time.

2624 6.12.1.2 Fulfilment of the dependencies

2625 The following table summarises all TOE functional requirements dependencies of this
 2626 ST and demonstrates that they are fulfilled.

SFR	Dependencies	Fulfilled by
FAU_ARP.1/SYS	FAU_SAA.1 Potential violation analysis	FAU_SAA.1/SYS
FAU_GEN.1/SYS	FPT_STM.1 Reliable time stamps	FPT_STM.1
FAU_SAA.1/SYS	FAU_GEN.1 Audit data generation	FAU_GEN.1/SYS
FAU_SAR.1/SYS	FAU_GEN.1 Audit data generation	FAU_GEN.1/SYS
FAU_STG.4/SYS	FAU_STG.1 Protected audit trail storage	FAU_STG.2
FAU_GEN.1/CON	FPT_STM.1 Reliable time stamps	FPT_STM.1
FAU_SAR.1/CON	FAU_GEN.1 Audit data generation	FAU_GEN.1/CON
FAU_STG.4/CON	FAU_STG.1 Protected audit trail storage	FAU_STG.2
FAU_GEN.1/CAL	FPT_STM.1 Reliable time stamps	FPT_STM.1
FAU_SAR.1/CAL	FAU_GEN.1 Audit data generation	FAU_GEN.1/CAL
FAU_STG.4/CAL	FAU_STG.1 Protected audit trail storage	FAU_STG.2
FAU_GEN.2	FAU_GEN.1 Audit data generation FIA_UID.1 Timing of identification	FAU_GEN.1/SYS FAU_GEN.1/CON FIA_UID.2
FAU_STG.2	FAU_GEN.1 Audit data generation	FAU_GEN.1/SYS FAU_GEN.1/CON FAU_GEN.1/CAL

FCO_NRO.2	FIA_UID.1 Timing of identification	FIA_UID.2
FCS_CKM.1/TLS	[FCS_CKM.2 Cryptographic key distribution, or FCS_COP.1 Cryptographic operation] FCS_CKM.4 Cryptographic key destruction	FCS_COP.1/TLS FCS_CKM.4
FCS_COP.1/TLS	[FDP_ITC.1 Import of user data without security attributes, or FDP_ITC.2 Import of user data with security attributes, or FCS_CKM.1 Cryptographic key generation] FCS_CKM.4 Cryptographic key destruction	FCS_CKM.1/TLS FCS_CKM.4
FCS_CKM.1/CMS	[FCS_CKM.2 Cryptographic key distribution, or FCS_COP.1 Cryptographic operation] FCS_CKM.4 Cryptographic key destruction	FCS_COP.1/CMS FCS_CKM.4

2627 **Table 18: SFR Dependencies**

2628 6.12.1.3 Justification for missing dependencies

2629 Dependency FCS_CKM.1 for FCS_COP.1/MEM ist not fulfilled. For the key generation
2630 process an external security module (“D-HSM”) is used so that the key is imported from
2631 an HSM during TOE production.

2632 The hash algorithm as defined in FCS_COP.1/HASH does not need any key material.
2633 As such the dependency to an import or generation of key material is omitted for this
2634 SFR.

2635 **6.12.2 Security Assurance Requirements rationale**

2636 The decision on the assurance level has been mainly driven by the assumed attack
2637 potential. As outlined in the previous chapters of this Security Target it is assumed that
2638 – at least from the WAN side – a high attack potential is posed against the security
2639 functions of the TOE. This leads to the use of AVA_VAN.5 (Resistance against high
2640 attack potential).

2641 In order to keep evaluations according to this Security Target commercially feasible EAL
2642 4 has been chosen as assurance level as this is the lowest level that provides the
2643 prerequisites for the use of AVA_VAN.5.

2644 Eventually, the augmentation by ALC_FLR.2 has been chosen to emphasize the
2645 importance of a structured process for flaw remediation at the developer’s side,
2646 specifically for such a new technology.

2647 6.12.2.1 Dependencies of assurance components

2648 The dependencies of the assurance requirements taken from EAL 4 are fulfilled
2649 automatically. The augmentation by AVA_VAN.5 and ALC_FLR.2 does not introduce
2650 additional assurance components that are not contained in EAL 4.

2651 7 TOE Summary Specification

2652 The following paragraph provides a TOE summary specification describing how the TOE
2653 meets each SFR.

2654

2655 7.1 SF.1: Authentication of Communication and Role Assignment 2656 for external entities

2657 The TOE contains a software module that authenticates all communication channels
2658 with WAN, HAN and LMN networks. The authentication is based on the TLS 1.2 protocol
2659 compliant to [RFC 5246]. According to [TR-03109], this TLS authentication mechanism
2660 is used for all TLS secured communications channels with external entities. The TOE
2661 does always implement the bidirectional authentication as required by [TR-03109-1] with
2662 one exception: if the Consumer requests a password-based authentication from the
2663 GWA according to [TR-03109-1], and the GWA activates this authentication method for
2664 this Consumer, the TOE uses a unidirectional TLS authentication. Thus, although the
2665 client has not sent a valid certificate, the TOE continues the TLS authentication process
2666 with the password authentication process for this client (see [RFC 5246, chap. 7.4.6.]).
2667 The password policy to be fulfilled hereby is that the password must be at least 10 char-
2668 acters long containing at least one character of each of the following character groups:
2669 capital letters, small letters, digits, and special characters (!"§\$%&/()=?+*~#',;:-_). Fur-
2670 ther characters could also be used.

2671 [TR-03109-1] requires the TOE to use elliptical curves conforming to [RFC 5289]
2672 whereas the following cipher suites are supported:

- 2673 • TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256,
- 2674 • TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384,
- 2675 • TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256, and
- 2676 • TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384.

2677 The following elliptical curves are supported by the TOE

- 2678 • BrainpoolP256r1 (according to [RFC 5639]),
- 2679 • BrainpoolP384r1 (according to [RFC 5639]),
- 2680 • BrainpoolP512r1 (according to [RFC 5639]),
- 2681 • NIST P-256 (according to [RFC 5114]), and
- 2682 • NIST P-384 (according to [RFC 5114]).

2683 Alongside, the TOE supports the case of unidirectional communication with wireless me-
2684 ter (via the wM-Bus protocol), where the external entity is authenticated via AES with
2685 CMAC authentication. In this case, the AES algorithm is operating in CBC mode with
2686 128-bit symmetric keys. The authentication is successful in case that the CMAC has
2687 been successfully verified by the use of a cryptographic key K_{mac} . The cryptographic key
2688 for CMAC authentication (K_{mac}) is derived from the meter individual key MK conformant
2689 to [TR-03116-3, chap. 7.2]. The meter individual key MK (brought into the TOE by the
2690 GWA) is selected by the TOE through the MAC-protected but unencrypted meter-id sub-
2691 mitted by the meter.

2692 The generation of the cryptographic key material for TLS secured communication chan-
2693 nels utilizes a Security Module. This Security Module is compliant to [TR-03109-2] and
2694 evaluated according to [SecModPP].

2695 The destruction of cryptographic key material used by the TOE is performed through
2696 “zeroisation”. The TOE stores all ephemeral keys used for TLS secured communication
2697 or other cryptographic operations in the RAM only. For instance, whenever a TLS se-
2698 cured communication is terminated, the TOE wipes the RAM area used for the crypto-
2699 graphic key material with 0-bytes directly after finishing the usage of that material.

2700 The TOE receives the authentication certificate of the external entity during the hand-
2701 shake phase of the TLS protocol. For the establishment of the TLS secured communi-
2702 cation channel, the TOE verifies the correctness of the signed data transmitted during
2703 the TLS protocol handshake phase. While importing an authentication certificate the
2704 TOE verifies the certificate chain of the certificate for all certificates of the SM-PKI ac-
2705 cording to [TR-03109-4]. Note, that the certificate used for the TLS-based authentication
2706 of wired meters is self-signed and not part of the SM-PKI. Additionally, the TOE checks
2707 whether the certificate is configured by the Gateway Administrator for the used interface,
2708 and whether the remote IP address used and configured in the TSF data are identical
2709 (**FIA_USB.1**). The TOE does not check the certificate’s revocation status. In order to
2710 authenticate the external entity, the key material of the TOE’s communication partner
2711 must be known and trusted.

2712 The following communication types are known to the TOE ²²²:

2713 a) WAN communication via IF_GW_WAN

²²² Please note that the TOE additionally offers the interface IF_GW_SM to the certified Security Module built into the TOE.

- 2714 b) LMN communication via IF_GW_MTR (wireless or wired Meter)
2715 c) HAN communication via IF_GW_CON, IF_GW_CLS or IF_GW_SRV

2716 Except the communication with wireless meters at IF_GW_MTR, all communication
2717 types are TLS-based. In order to accept a TLS communication connection as being au-
2718 thenticated, the following conditions must be fulfilled:

- 2719 a) The TLS channel must have been established successfully with the required
2720 cryptographic mechanisms.
2721 b) The certificate of the external entity must be known and trusted through config-
2722 uration by the Gateway Administrator, and associated with the according com-
2723 munication type²²³.

2724 For the successfully authenticated external entity, the TOE performs an internal assign-
2725 ment of the communication type based on the certificate received at the external inter-
2726 face if applicable. The user identity is associated with the name of the certificate owner
2727 in case of a certificate-based authentication or with the user name in case of a password-
2728 based authentication at interface IF_GW_CON.

2729 For the LMN communication of the TOE with wireless (a.k.a. wM-Bus-based) meters,
2730 the external entity is authenticated by the use of the AES-CMAC algorithm and the me-
2731 ter-ID for wired Meters is used for association to the user identity (**FIA_USB.1**). This
2732 communication is only allowed for meters not supporting TLS-based communication
2733 scenarios.

2734 **FCS_CKM.1/TLS** is fulfilled by the TOE through the implementation of the pseudoran-
2735 dom function of the TLS protocol compliant to [RFC 5246] while the Security Module is
2736 used by the TOE for the generation of the cryptographic key material. The use of TLS
2737 according to [RFC 5246] and the use of the postulated cipher suites according to
2738 [RFC 5639] fulfill the requirement **FCS_COP.1/TLS**. The requirements
2739 **FCS_CKM.1/MTR** and **FCS_COP.1/MTR** are fulfilled by the use of AES-CMAC-secured
2740 communication for wireless meters. The requirement **FCS_CKM.4** is fulfilled by the de-
2741 scribed method of “zeroisation” when destroying cryptographic key material. The imple-
2742 mentation of the described mechanisms (especially the use of TLS and AES-CBC with
2743 CMAC) fulfills the requirements **FTP_ITC.1/WAN**, **FTP_ITC.1/MTR**, and

²²³ Of course, this does not apply if password-based authentication is configured at IF_GW_CON.

2744 **FTP_ITC.1/USR. FPT_RPL.1** is fulfilled by the use of the TLS protocol respectively the
2745 integration of transmission counters according to [TR-03116-3, chap. 7.3].

2746 A successfully established connection will be automatically disconnected by the TOE if
2747 a TLS channel to the WAN is established more than 48 hours, if a TLS channel to the
2748 LMN has transmitted more than 5 MB of information or if a channel to a local user is
2749 inactive for a time configurable by the authorised Gateway Administrator of up to 10
2750 minutes, and a new connection establishment will require a new full authentication pro-
2751 cedure (**FIA_UAU.6**). In any case – whether the connection has been successfully es-
2752 tablished or not – all associated resources related with the connection or connection
2753 attempt are freed. The implementation of this requirement is done by means of the TOE's
2754 operation system monitoring and limiting the resources of each process. This means
2755 that with each connection (or connection attempt) an internal session is created that is
2756 associated with resources monitored and limited by the TOE. All resources are freed
2757 even before finishing a session if the respective resource is no longer needed so that no
2758 previous information content of a resource is made available. Especially, the associated
2759 cryptographic key material is wiped as soon it is no longer needed. As such, the TOE
2760 ensures that during the phase of connection termination the internal session is also ter-
2761 minated and by this, all internal data (associated cryptographic key material and volatile
2762 data) is wiped by the zeroisation procedure described. Allocated physical resources are
2763 also freed. In case non-volatile data is no longer needed, the associated resources data
2764 are freed, too. The TOE doesn't reuse any objects after deallocation of the resource
2765 (**FDP_RIP.2**).

2766 If the external entity can be successfully authenticated on basis of the received certificate
2767 (or the password in case of a consumer using password authentication) and the ac-
2768 claimed identity could be approved for the used external interface, the TOE associates
2769 the user identity, the authentication status and the connecting network to the role ac-
2770 cording to the internal role model (**FIA_ATD.1**). In order to implement this, the TOE uti-
2771 lizes an internal data model which supplies the allowed communication network and
2772 other restricting properties linked with the submitted security attribute on the basis of the
2773 submitted authentication data providing the multiple mechanisms for authentication of
2774 any user's claimed identity according to the necessary rules according to [TR-03109-1]
2775 (**FIA_UAU.5**).

2776 In case of wireless meter communication (via the wM-Bus protocol), the security attribute
2777 of the Meter is the meter-id authenticated by the CMAC, where the meter-id is the identity
2778 providing criterion that is used by the TOE. The identity of the Meter is associated to the

2779 successfully authenticated external entity by the TOE and linked to the respective role
2780 according to Table 5 and its active session. In this case, the identity providing criterion
2781 is also the meter-id.

2782 The TOE enforces an explicit and complete security policy protecting the data flow for
2783 all external entities (**FDP_IFC.2/FW**, **FDP_IFF.1/FW**, **FDP_IFC.2/MTR**,
2784 **FDP_IFF.1/MTR**). The security policy defines the accessibility of data for each external
2785 entity and additionally the permitted actions for these data. Moreover, the external enti-
2786 ties do also underlie restrictions for the operations which can be executed with the TOE
2787 (**FDP_ACF.1**). In case that it is not possible to authenticate an external entity success-
2788 fully (e.g. caused by unknown authentication credentials), no other action is allowed on
2789 behalf of this user and the concerning connection is terminated (**FIA_UAU.2**). Any com-
2790 munication is only possible after successful authentication and identification of the ex-
2791 ternal entity (**FIA_UID.2**, **FIA_USB.1**).

2792 The reception of the wake-up service data package is a special case that requests the
2793 TOE to establish a TLS authenticated and protected connection to the Gateway Admin-
2794 istrator. The TOE validates the data package due to its compliance to the structure de-
2795 scribed in [TR-03109-1] and verifies the ECDSA signature with the public key of the
2796 Gateway Administrator's certificate which must be known and trusted to the TOE. The
2797 TOE does not perform a revocation check or any validity check compliant to the shell
2798 model. The TOE verifies the electronic signature successfully when the certificate is
2799 known, trusted and associated to the Gateway Administrator. The TOE establishes the
2800 connection to the Gateway Administrator when the package has been validated due to
2801 its structural conformity, the signature has been verified and the integrated timestamp
2802 fulfills the requirements of [TR-03109-1]. Receiving the data package and the successful
2803 validation of the wake-up package does not mean that the Gateway Administrator has
2804 successfully been authenticated.

2805 If the Gateway Administrator could be successfully authenticated based on the certificate
2806 submitted during the TLS handshake phase, the role will be assigned by the TOE ac-
2807 cording to now approved identity based on the internal role model and the TLS channel
2808 will be established.

2809 **WAN roles**

2810 The TOE assigns the following roles in the WAN communication (**FMT_SMR.1**):

- 2811 • authorised Gateway Administrator,
- 2812 • authorised External Entity.

2813 The role assignment is based on the X.509 certificate used by the external entity during
2814 TLS connection establishment. The TOE has explicit knowledge of the Gateway Admin-
2815 istrator's certificate and the assignment of the role "Gateway Administrator" requires the
2816 successful authentication of the WAN connection.

2817 The assignment of the role "Authorized External Entity" requires the X.509 certificate
2818 that is used during the TLS handshake to be part of an internal trust list that is under
2819 control of the TOE.

2820 The role "Authorized External Entity" can be assigned to more than one external entity.

2821 **HAN roles**

2822 The TOE differentiates and assigns the following roles in the HAN communication
2823 (**FMT_SMR.1**):

- 2824 • authorised Consumer
- 2825 • authorised Service Technician

2826 The role assignment is based on the X.509 certificate used by the external entity for
2827 TLS-secured communication channels or on password-based authentication at interface
2828 IF_GW_CON if configured (**FIA_USB.1**).

2829 The assignment of roles in the HAN communication requires the successful identification
2830 of the external entity as a result of a successful authentication based on the certificate
2831 used for the HAN connection. The certificates used to authenticate the "Consumer" or
2832 the "Service Technician" are explicitly known to the TOE through configuration by the
2833 Gateway Administrator.

2834 **Multi-client capability in the HAN**

2835 The HAN communication might use more than one, parallel and independent authenti-
2836 cated communication channels. The TOE ensures that the certificates that are used for
2837 the authentication are different from each other.

2838 The role "Consumer" can be assigned to multiple, parallel sessions. The TOE ensures
2839 that these parallel sessions are logically distinct from each other by the use of different
2840 authentication information. This ensures that only the Meter Data associated with the
2841 authorized user are provided and Meter Data of other users are not accessible.

2842 **LMN roles**

2843 One of the following authentication mechanisms is used for Meters:

- 2844 a) authentication by the use of TLS according to [RFC 5246] for wired Meters
2845 a) authentication by the use of AES with CMAC authentication according to
2846 [RFC 3394] for wireless Meters.

2847 The TOE explicitly knows the identification credentials needed for authentication (X.509
2848 certificate when using TLS; meter-id in conjunction with CMAC and known K_{mac} when
2849 using AES) through configuration by the Gateway Administrator. If the Meter could be
2850 successfully authenticated and the claimed identity could thus be proved, the according
2851 role "Authorised External Entity" is assigned by the TOE for this Meter at IF_GW_MTR
2852 based on the internal role model.

2853 **LMN multi-client capabilities**

2854 The LMN communication can be run via parallel, logically distinct and separately au-
2855 thenticated communication channels. The TOE ensures that the authentication creden-
2856 tials of each separate channel are different.

2857 The TOE's internal policy for access to data and objects under control of the TOE is
2858 closely linked with the identity of the external entity at IF_GW_MTR according to the
2859 TOE-internal role model. Based on the successfully verified authentication data, a per-
2860 mission catalogue with security attributes is internally assigned, which defines the al-
2861 lowed actions and access permissions within a communication channel.

2862 The encapsulation of the TOE processes run by this user is realized through the mech-
2863 anisms offered by the TOE's operating system and very restrictive user rights for each
2864 process. Each role is assigned to a separate, limited user account in the TOE's operating
2865 system. For all of these accounts, it is only allowed to read, write or execute the files
2866 absolutely necessary for implementing the program logic. For each identity interacting
2867 with the TOE, a separate operating system process is started. Especially, the databases
2868 used by the TOE and the logging service are adequately separated for enforcement of
2869 the necessary security domain separation (**FDP_ACF.1**). The allowed actions and ac-
2870 cess permissions and associated objects are assigned to the successfully approved
2871 identity of the user based on the used authentication credentials and the resulting asso-
2872 ciated role. The current session is unambiguously associated with this user. No interac-
2873 tion (e.g. access to Meter Data) is possible without an appropriate permission catalogue
2874 (**FDP_ACC.2**). The freeing of the role assignment and associated resources are ensured
2875 through the monitoring of the current session.

2876 **7.2SF.2: Acceptance and Deposition of Meter Data, Encryption of** 2877 **Meter Data for WAN transmission**

2878 The TOE receives Meter Data from an LMN communication channel and deposits these
2879 Meter Data with the associated data for tariffing in a database especially assigned to this
2880 individual Meter residing in an encrypted file system (**FCS_COP.1/MEM**). The time in-
2881 terval for receiving or retrieving Meter Data can be configured individually per meter
2882 through a successfully authenticated Gateway Administrator and are initialized by the
2883 TOE during the setup procedure with pre-defined values.

2884 The Meter Data are cryptographically protected and their integrity is verified by the TOE
2885 before the tariffing and deposition is performed. In case of a TLS secured communica-
2886 tion, the integrity and confidentiality of the transmitted data is protected by the TLS pro-
2887 tocol according to [RFC 5246]. In case of a unidirectional communication at
2888 IF_GW_MTR/wireless, the integrity is verified by the verification of the CMAC check sum
2889 whereas the protection of the confidentiality is given by the use of AES in CBC mode
2890 with 128 bit key length in combination with the CMAC authentication (**FCS_CKM.1/MTR,**
2891 **FCS_COP.1/MTR**). The AES encryption key has been brought into the TOE via a man-
2892 agement function during the pairing process for the Meter. In the TOE's internal data
2893 model, the used cryptographic keys K_{mac} and K_{enc} are associated with the meter-id due
2894 to the fact of the unidirectional communication. The TOE contains a packet monitor for
2895 Meter Data to avoid replay attacks based on the re-sending of Meter Data packages. In
2896 case of recognized data packets which have already been received and processed by
2897 the TOE, these data packets are blocked by the packet monitor (**FPT_RPL.1**).

2898 Concerning the service layers, the TOE detects replay attacks that can occur during
2899 authentication processes against the TOE or for example receiving data from one of the
2900 involved communication networks. This is for instance achieved through the correct in-
2901 terpretation of the strictly increasing ordering numbers for messages from the meters (in
2902 case that a TLS-secured communication channel is not used), through the enforcement
2903 of an appropriate time slot of execution for successfully authenticated wake-up calls, and
2904 of course through the use of the internal means of the TLS protocol according to
2905 [RFC 5246] (**FPT_RPL.1**).

2906 The deposition of Meter Data is performed in a way that these Meter Data are associated
2907 with a permission profile. This means that all of the operations and actions that can be
2908 taken with these data as described afterwards (e.g. sending via WAN to an Authenti-
2909 cated External Entity) depend on the permissions which are associated with the

2910 Meter Data. For metrological purposes, the Meter Data's security attribute - if applicable
2911 - will be persisted associated with its corresponding Meter Data by the TOE. All user
2912 associated data stored by the TOE are protected by an AES-128-CMAC value. Before
2913 accessing these data, the TOE verifies the CMAC value that has been applied to the
2914 user data and detects integrity errors on any data and especially on user associated
2915 Meter Data in a reliable manner (**FDP_SDI.2**).

2916 Closely linked with the deposition of the Meter Data is the assignment of an unambigu-
2917 ous and reliable timestamp on these data. The reliability grounds on the regular use of
2918 an external time source offering a sufficient exactness (**FPT_STM.1**) which is used to
2919 synchronize the operating system of the TOE. A maximum deviation of 3% of the meas-
2920 uring period is allowed to be in conformance with [PP_GW]. The data set (Meter Data
2921 and tariff data) is associated with the timestamp in an inseparably manner because each
2922 Meter Data entry in the database includes the corresponding time stamp and the data-
2923 base is cryptographically protected through the encrypted file system. For details about
2924 database encryption please see page 152).

2925 For transmission of consumption data (tariffed Meter Data) or status data into the WAN,
2926 the TOE ensures that the data are encrypted and digitally signed (**FCO_NRO.2**,
2927 **FCS_CKM.1/CMS**, **FCS_COP.1/CMS**, **FCS_COP.1/HASH**, **FCS_COP.1/MEM**). In case
2928 of a successful transmission of consumption data into the WAN, beside the transmitted
2929 data the data's signature applied by the TOE is logged in the Consumer-Log for the
2930 respective Consumer at IF_GW_CON thus providing the possibility not only for the re-
2931 cipient to verify the evidence of origin for the transmitted data but to the Consumer at
2932 IF_GW_CON, too (**FCO_NRO.2**). The encryption is performed with the hybrid encryption
2933 as specified in [TR-03109-1-I] in combination with [TR-03116-3]. The public key of the
2934 external entity, the data have to be encrypted for, is known by the TOE through the
2935 authentication data configured by the Gateway Administrator and its assigned identity.
2936 This public key is assumed by the TOE to be valid because the TOE does not verify the
2937 revocation status of certificates. The public key used for the encryption of the derived
2938 symmetric key used for transmission of consumption data is different from the public key
2939 in the TLS certificate of the external entity used for the TLS secured communication
2940 channel. The derivation of the hybrid key used for transmission of consumption data is
2941 done according to [TR-03116-3, chapter 8].

2942 The TOE does also foresee the case that the data is encrypted for an external entity that
2943 is not directly assigned to the external entity holding the active communication channel.
2944 The electronic signature is created through the utilization of the Security Module whereas

2945 the TOE is responsible for the computation of the hash value for the data to be signed.
2946 Therefore, the TOE utilizes the SHA-256 or SHA-384 hash algorithm. The SHA-512 hash
2947 algorithm is available in the TOE but not yet used (**FCS_COP.1/HASH**). The data to be
2948 sent to the external entity are prepared on basis of the tariffed meter data. The data to
2949 be transmitted are removed through deallocation of the resources after the (successful
2950 or unsuccessful) transmission attempt so that afterwards no previous information will be
2951 available (**FDP_RIP.2**). The created temporary session keys which have been used for
2952 encryption of the data are also deleted by the already described zeroisation mechanism
2953 as soon they are no longer needed (**FCS_CKM.4**).

2954 The time interval for transmission of the data is set for a daily transmission, and can be
2955 additionally configured by the Gateway Administrator. The TOE sends randomly gener-
2956 ated messages into the WAN, so that through this the analysis of frequency, load, size
2957 or the absence of external communication is concealed (**FPR_CON.1**). Data that are not
2958 relevant for accounting are aliased for transmission so that no personally identifiable
2959 information (PII) can be obtained by an analysis of not billing-relevant information sent
2960 to parties in the WAN. Therefore, the TOE utilizes the alias as defined by the Gateway
2961 Administrator in the Processing Profile for the Meter identity to external parties in the
2962 WAN. Thereby, the TOE determines the alias for a user and verifies that it conforms to
2963 the alias given in the Processing Profile (**FPR_PSE.1**).

2964

2965 **7.3SF.3: Administration, Configuration and SW Update**

2966 The TOE includes functionality that allows its administration and configuration as well as
2967 updating the TOE's complete firmware ("firmware updates") or only the software appli-
2968 cation including the service layer ("software updates"). This functionality is only provided
2969 for the authenticated Gateway Administrator (**FMT_MOF.1**, **FMT_MSA.1/AC**,
2970 **FMT_MSA.1/FW**, **FMT_MSA.1/MTR**).

2971 The following operations can be performed by the successfully authenticated Gateway
2972 Administrator:

- 2973 a) Definition and deployment of Processing Profiles including user administration,
2974 rights management and setting configuration parameters of the TOE
- 2975 b) Deployment of tariff information
- 2976 c) Deployment and installation of software/firmware updates

2977 A complete overview of the possible management functions is given in Table 14 and
2978 Table 15 (**FMT_SMF.1**). Beside the possibility for a successfully authenticated Service
2979 Technician to view the system log via interface IF_GW_SRV, administrative or configu-
2980 ration measures on the TOE can only be taken by the successfully authenticated Gate-
2981 way Administrator.

2982 In order to perform these measures, the TOE has to establish a TLS secured channel
2983 to the Gateway Administrator and must authenticate the Gateway Administrator suc-
2984 cessfully. There are two possibilities:

- 2985 a) The TOE independently contacts the Gateway Administrator at a certain time
2986 specified in advance by the Gateway Administrator.
- 2987 b) Through a message sent to the wake-up service, the TOE is requested to con-
2988 tact the Gateway Administrator.

2989 In the second case, the wake-up data packet is received by the TOE from the WAN and
2990 checked by the TOE for structural correctness according to [TR-03109-1]. Afterwards,
2991 the TOE verifies the correctness of the electronic signature applied to the wake-up mes-
2992 sage data packet using the certificate of the Gateway Administrator stored in the TSF
2993 data. Afterwards, a TLS connection to the Gateway Administrator is established by the
2994 TOE and the above mentioned operations can be performed.

2995 Software/firmware updates always have to be signed by the TOE manufacturer.

2996 Software/firmware updates can be of different content:

- 2997 a) The whole boot image of the TOE is changed.
- 2998 b) Only individual components of the TOE are changed. These components can
2999 be the boot loader plus the static kernel or the SMGW application.

3000 The update packet is realized in form of an archive file enveloped into a CMS signature
3001 container according to [RFC 5652]. The electronic signature of the update packet is cre-
3002 ated using signature keys from the TOE manufacturer. The verification of this signature
3003 is performed by the TOE using the TOE's Security Module using the trust anchor of the
3004 TOE manufacturer. If the signature of the transferred data could not be successfully
3005 verified by the TOE or if the version number of the new firmware is not higher than the
3006 version number of the installed firmware, the received data is rejected by the TOE and
3007 not used for further processing. Any administrator action is entered in the System Log of
3008 the TOE. Additionally, an authorised Consumer can interact with the TOE via the

3009 interface IF_GW_CON to get the version number and the current time displayed
3010 (**FMT_MOF.1**).

3011 The signature of the update packet is immediately verified after receipt. After successful
3012 verification of the update packet the update process is immediately performed. In each
3013 case, the Gateway Administrator gets notified by the TOE and an entry in the TOE's
3014 system log will be written.

3015 All parameters that can be changed by the Gateway Administrator are preset with re-
3016 strictive values by the TOE. No role can specify alternative initial values to override these
3017 restrictive default values (**FMT_MSA.3/AC**, **FMT_MSA.3/FW**, **FMT_MSA.3/MTR**).

3018 This mechanism is supported by the TOE-internal resource monitor that internally mon-
3019 itors existing connections, assigned roles and operations allowed at a specific time.

3020

3021 **7.4 SF.4: Displaying Consumption Data**

3022 The TOE offers the possibility of displaying consumption data to authenticated Consum-
3023 ers at interface IF_GW_CON. Therefore, the TOE contains a web server that implements
3024 TLS-based communication with mutual authentication (**FTP_ITC.1/USR**). If the Con-
3025 sumer requests a password-based authentication from the GWA according to [TR-
3026 03109-1] and the GWA activates this authentication method for this Consumer, the TOE
3027 uses TLS authentication with server-side authentication and HTTP digest access au-
3028 thentication according to [RFC 7616]. In both cases, the requirement **FCO_NRO.2** is
3029 fulfilled through the use of TLS-based communication and through encryption and digital
3030 signature of the (tariffed) Meter Data to be displayed using **FCS_COP.1/HASH**.

3031 To additionally display consumption data, a connection at interface IF_GW_CON must
3032 be established and the role "(authorised) Consumer" is assigned to the user with his
3033 used display unit by the TOE. Different Consumer can use different display units. The
3034 amount of allowed connection attempts at IF_GW_CON is set to 5. In case the amount
3035 of allowed connection attempts is reached, the TOE blocks IF_GW_CON (**FIA_AFL.1**).
3036 The display unit has to technically support the applied authentication mechanism and
3037 the HTTP protocol version 1.1 according to [RFC 2616] as communication protocol. Data
3038 is provided as HTML data stream and transferred to the display unit. In this case, further
3039 processing of the transmitted data stream is carried out by the display unit.

3040 According to [TR-03109-1], the TOE exclusively transfers Consumer specific consump-
3041 tion data to the display unit. The Consumer can be identified in a clear and unambiguous

3042 manner due to the applied authentication mechanism. Moreover, the TOE ensures that
3043 exclusively the data actually assigned to the Consumer is provided at the display unit
3044 via IF_GW_CON (**FIA_USB.1**).

3045

3046 **7.5 SF.5: Audit and Logging**

3047 The TOE generates audit data for all actions assigned in the System-Log
3048 (**FAU_GEN.1/SYS**), the Consumer-Log (**FAU_GEN.1/CON**), and the Calibration-Log
3049 (**FAU_GEN.1/CAL**) as well. On the one hand, this applies to the values measured by
3050 the Meter (Consumer-Log) and on the other hand to system data (System-Log) used by
3051 the Gateway Administrator of the TOE in order to check the TOE's current functional
3052 status. In addition, metrological entries are created in the Calibration-Log. The TOE thus
3053 distinguishes between the following log classes:

- 3054 a) System-Log
- 3055 b) Consumer-Log
- 3056 c) Calibration-Log

3057 The TOE audits and logs all security functions that are used. Thereby, the TOE compo-
3058 nent accomplishing this security audit functionality includes the necessary rules moni-
3059 toring these audited events and through this indicating a potential violation of the en-
3060 forcement of the TOE security functionality (e. g. in case of an integrity violation, replay
3061 attack or an authentication failure). If such a security breach is detected, it is shown as
3062 such in the log entry (**FAU_SAA.1/SYS**).

3063 The System-Log can only be read by the authorized Gateway Administrator via interface
3064 IF_GW_WAN or by an authorized Service Technician via interface IF_GW_SRV
3065 (**FAU_SAR.1/SYS**). Potential security breaches are separately indicated and identified
3066 as such in the System-Log and the GWA gets informed about this potential security
3067 breach (**FAU_ARP.1/SYS**, **FDP_SDI.2**). Data of the Consumer-Log can exclusively be
3068 viewed by authenticated Consumers via interface IF_GW_CON designed to display con-
3069 sumption data (**FAU_SAR.1/CON**). The data included in the Calibration-Log can only be
3070 read by the authenticated Gateway Administrator via interface IF_GW_WAN
3071 (**FAU_SAR.1/CAL**).

3072 If possible, each log entry is assigned to an identity that is known to the TOE. For audit
3073 events resulting from actions of identified users resp. roles, the TOE associates the

3074 generated log information to the identified users while generating the audit information
3075 (**FAU_GEN.2**).

3076 Generated audit and log data are stored in a cryptographically secured storage. For this
3077 purpose, a file-based SQL database system is used securing its' data using an AES-
3078 XTS-128 encrypted file system (AES in XTS mode with 128-bit keys) according to
3079 [FIPS Pub. 197] and [NIST 800-38E]. This is achieved by using device-specific AES
3080 keys so that the secure environment can only be accessed with the associated symmet-
3081 ric key available. Using an appropriately limited access of this symmetric, the TOE im-
3082 plements the necessary rules so that it can be ensured that unauthorised modification
3083 or deletion is prohibited (**FAU_STG.2**).

3084 Audit and log data are stored in separate locations: One location is used to store Con-
3085 sumer-specific log data (Consumer-Log) whereas device status data and metrological
3086 data are stored in a separate location: status data are stored in the System-Log and
3087 metrological data are stored in the Calibration-Log. Each of these logs is located in phys-
3088 ically separate databases secured by different cryptographic keys. In case of several
3089 external meters, a separate database is created for each Meter to store the respective
3090 consumption and log data (**FAU_GEN.2**).

3091 If the audit trail of the System-Log or the Consumer-Log is full (so that no further data
3092 can be added), the oldest entries in the audit trail are overwritten (**FAU_STG.2**,
3093 **FAU_STG.4/SYS**, **FAU_STG.4/CON**). If the Consumer-Log's oldest audit record must
3094 be kept because the period of billing verification (of usually 15 months) has not been
3095 reached, the TOE's metrological activity is paused until the oldest audit record gets
3096 deletable. Thereafter, the TOE's metrological activity is started again through an internal
3097 timer. Moreover, the mechanism for storing log entries is designed in a way that these
3098 entries are cryptographically protected against unauthorized deletion. This is especially
3099 achieved by assigning cryptographic keys to each of the individual databases for the
3100 System-Log, Consumer-Log and Calibration-Log.

3101 If the Calibration-Log cannot store any further data, the operation of the TOE is stopped
3102 through the termination of its metering services and the TOE informs the Gateway Ad-
3103 ministrator by creating an entry in the System-Log, so that additional measures can be
3104 taken by the Gateway Administrator. Calibration-Log entries are never overwritten by
3105 the TOE (**FAU_STG.2**, **FAU_STG.4/CAL**, **FMT_MOF.1**).

3106 The TOE anonymizes the data in a way that no conclusions about a specific person or
3107 user can be drawn from the log or recorded not billing relevant data. Stored consumption

3108 data are exclusively intended for accounting with the energy supplier. The data stored
3109 in the System-Log are used for analysis purposes concerning necessary technical anal-
3110 yses and possible security-related information.

3111 **7.6 SF.6: TOE Integrity Protection**

3112 The TOE makes physical tampering detectable through the TOE's sealed packaging of
3113 the device. So if an attacker opens the case, this can be physically noticed, e. g. by the
3114 Service Technician (**FPT_PHP.1**).

3115 The TOE provides a secure boot mechanism. Beginning from the AES-128-encrypted
3116 bootloader protected by a digital signature applied by the TOE manufacturer, each sub-
3117 sequent step during the boot process is based on the previous step establishing a con-
3118 tinuous forward-concatenation of cryptographical verification procedures. Thus, it is en-
3119 sured that each part of the firmware, that means the operating system, the service layers
3120 and the software application in general, is tested by the TOE during initial startup.
3121 Thereby, a test of the TSF data being part of the software application is included. During
3122 this complete self-test, it is checked that the electronic system of the physical device,
3123 and all firmware components of the TOE are in authentic condition. This complete self-
3124 test can also be run at the request of the successfully authenticated Gateway Adminis-
3125 trator via interface IF_GW_WAN or at the request of the successfully authenticated Ser-
3126 vice Technician via interface IF_GW_SRV. At the request of the successfully authenti-
3127 cated Consumer via interface IF_GW_CON, the TOE will only test the integrity of the
3128 Smart Metering software application including the service layers (without the operating
3129 system) and the completeness of the TSF data stored in the TOE's database. Addition-
3130 ally, the TOE itself runs a complete self-test periodically at least once a month during
3131 normal operation. The integrity of TSF data stored in the TOE's database is always
3132 tested during read access of that part of TSF data (**FPT_TST.1**). **FPT_RPL.1** is fulfilled
3133 by the use of the TLS protocol respectively the integration of transmission counters ac-
3134 cording to [TR-03116-3, chap. 7.3], and through the enforcement of an appropriate time
3135 slot of execution for successfully authenticated wake-up calls.

3136 If an integrity violation of the TOE's hardware or firmware is detected or if the deviation
3137 between local system time of the TOE and the reliable external time source is too large,
3138 further use of the TOE for the purpose of gathering Meter Data is not possible. Also in
3139 this case, the TOE signals the incorrect status via a suitable signal output on the case

3140 of the device, and the further use of the TOE for the purpose of gathering Meter Data is
 3141 not allowed (**FPT_FLS.1**).

3142 Basically, if an integrity violation is detected, the TOE will create an entry in the System
 3143 Log to document this status for the authorised Gateway Administrator on interface
 3144 IF_GW_WAN resp. for the authorised Service Technician on interface IF_GW_SRV, and
 3145 will inform the Gateway Administrator on this incident (**FAU_ARP.1/SYS**,
 3146 **FAU_GEN.1/SYS**, **FAU_SAR.1/SYS**, **FPT_TST.1**).

3147 **7.7 TSS Rationale**

3148 The following table shows the correspondence analysis for the described TOE security
 3149 functionalities and the security functional requirements.

3180 **10 Appendix**3181 **10.1 Mapping from English to German terms**

English term	German term
billing-relevant	abrechnungsrelevant
CLS, Controllable Local System	dezentral steuerbare Verbraucher- oder Erzeugersysteme
Consumer	Anschlussnutzer; Letztverbraucher (im verbrauchenden Sinne); u.U. auch Einspeiser
Consumption Data	Verbrauchsdaten
Gateway	Kommunikationseinheit
Grid	Netz (für Strom/Gas/Wasser)
Grid Status Data	Zustandsdaten des Versorgungsnetzes
LAN, Local Area Network	Lokales Kommunikationsnetz
LMN, Local Metrological Network	Lokales Messeinrichtungsnetz
Meter	Messeinrichtung (Teil eines Messsystems)
Processing Profiles	Konfigurationsprofile
Security Module	Sicherheitsmodul (z.B. eine Smart Card)
Service Provider	Diensteanbieter
Smart Meter, Smart Metering System ²²⁵	Intelligente, in ein Kommunikationsnetz eingebundene, elektronische Messeinrichtung (Messsystem)
TOE	EVG (E valuierungs g egenstand)

²²⁵ Please note that the terms "Smart Meter" and "Smart Metering System" are used synonymously within this document.

WAN, Wide Area Network	Weitverkehrsnetz (für Kommunikation)
------------------------	--------------------------------------

3182

3183 **10.2 Glossary**

Term	Description
Authenticity	property that an entity is what it claims to be (according to [SD_6])
Block Tariff	Tariff in which the charge is based on a series of different energy/volume rates applied to successive usage blocks of given size and supplied during a specified period. (according to [CEN])
BPL	<i>Broadband Over Power Lines</i> , a method of power line communication
CA	Certification Authority, an entity that issues digital certificates. CLS config
CDMA	<i>Code Division Multiple Access</i>
CLS config (secondary asset)	See chapter 3.2
CMS	Cryptographic Message Syntax
Confidentiality	the property that information is not made available or disclosed to unauthorised individuals, entities, or processes (according to [SD_6])
Consumer	End user of electricity, gas, water or heat (according to [CEN]). See chapter 3.1
DCP	<i>Data Co-Processor</i> , security hardware of the CPU
DLMS	Device Language Message Specification
DTBS	Data To Be Signed
EAL	Evaluation Assurance Level

Term	Description
Energy Service Provider	Organisation offering energy related services to the Consumer (according to [CEN])
ETH	Ethernet
external entity	See chapter 3.1
firmware update	See chapter 3.2
Gateway Administrator (GWA)	See chapter 3.1
Gateway config (secondary asset)	See chapter 3.2
Gateway time	See chapter 3.2
G.hn	Gigabit Home Networks
GPRS	<i>General Packet Radio Service</i> , a packet oriented mobile data service
Home Area Network (HAN)	In-house data communication network which interconnects domestic equipment and can be used for energy management purposes (adopted according to [CEN]).
Integrity	property that sensitive data has not been modified or deleted in an unauthorised and undetected manner (according to [SD_6])
IT-System	Computersystem
Local Area Network (LAN)	Data communication network, connecting a limited number of communication devices (Meters and other devices) and covering a moderately sized geographical area within the premises of the consumer. In the context of this ST, the term LAN is used as a hypernym for HAN and LMN (according to [CEN], adopted).

Term	Description
Local attacker	See chapter 3.4
LTE	<i>Long Term Evolution</i> mobile broadband communication standard
Meter config (secondary asset)	See chapter 3.2
Local Metrological Network (LMN)	In-house data communication network which interconnects metrological equipment.
Meter Data	See chapter 3.2
Meter Data Aggregator (MDA)	Entity which offers services to aggregate metering data by grid supply point on a contractual basis. NOTE: The contract is with a supplier. The aggregate is of all that supplier's consumers connected to that particular grid supply point. The aggregate may include both metered data and data estimated by reference to standard load profiles (adopted from [CEN])
Meter Data Collector (MDC)	Entity which offers services on a contractual basis to collect metering data related to a supply and provide it in an agreed format to a data aggregator (that can also be the DNO). NOTE: The contract is with a supplier or a pool. The collection may be carried out by manual or automatic means. ([CEN])
Meter Data Management System (MDMS)	System for validating, storing, processing and analysing large quantities of Meter Data. ([CEN])
Metrological Area Network	In-house data communication network which interconnects metrological equipment (i.e. Meters)
OEM	Original Equipment Manufacturer
OMS	Open Metering System

Term	Description
OCOTP	On-Chip One-time-programmable
Personally Identifiable Information (PII)	Personally Identifiable Information refers to information that can be used to uniquely identify, contact, or locate a single person or can be used with other sources to uniquely identify a single individual.
RJ45	registered jack #45; a standardized physical network interface
RMII	Reduced Media Independent Interface
RTC	Real Time Clock
Service Technician	Human entity being responsible for diagnostic purposes.
Smart Metering System	The Smart Metering System consists of a Smart Meter Gateway and connected to one or more meters. In addition, CLS (i.e. generation plants) may be connected with the gateway for dedicated communication purposes.
SML	Smart Message Language
Tariff	Price structure (normally comprising a set of one or more rates of charge) applied to the consumption or production of a product or service provided to a Consumer (according to [CEN]).
TCP/IP	Transmission Control Protocol / Internet Protocol
TLS	Transport Layer Security protocol according to [RFC 5246]
TOE	Target of Evaluation - set of software, firmware and/or hardware possibly accompanied by guidance
TSF	TOE security functionality
UART	Universal Asynchronous Receiver Transmitter

Term	Description
WAN attacker	See chapter 3.4
WLAN	Wireless Local Area Network
