3	Conclusion	5
4	Bibliography	6

1 Executive Summary

The IT product identified in this report was assessed according to the EUCC Annex IV Assurance Continuity Requirements [EUCC], the developer's Impact Analysis Report [IAR] and the Evaluator Assessment [EA].

The baseline for this maintenance assessment was the Certification Report [CR], the Security Target and the Evaluation Technical Report of the EUCC certified product, reference EUCC-3110-2026-2500173-01.

The changes to the certified product are related to a HW update to functionality outside the TOE boundary that does not affect the TOE implementation, the introduction of an additional TOE SW configuration and guidance updates related to these changes. As a result, the new Security Target [ST] covers one new HW version and two SW configurations, resulting in three new TOE versions.

Consideration of the nature of the changes leads to the conclusion that they can be classified as minor changes and that certificate maintenance is the correct path to continuity of assurance.

The resistance to attacks has not been re-assessed in the course of this maintenance process. Therefore, the assurance as outlined in the Certification Report [CR] is maintained for the product.

The identification of the maintained product is modified to NXP NSN4XX2M0 Series - Secure Element, versions NSN4XX2M0_SE B1.1.000 J6, NSN4XX2M0_SE B1.1.000 T0, NSN4XX2M0_SE B2.1.000 T0.

This Maintenance Report is an addendum to Certification Report EUCC-3110-2026-2500173-01 Certification Report [CR].

There is no new certificate and ETRfc as a result of this maintenance activity.

Reproduction is authorised provided the report is reproduced in its entirety.

This document was initially issued on 18 September 2026 as version 1 and re-issued same day as version 2 to correct the year of issuance.

2 Details of the Assurance Continuity activity

2.1 Introduction

On 12 May 2026 NXP Semiconductors Netherlands N.V. submitted a request for assurance continuity maintenance activity for the NXP NSN4XX2M0 Series - Secure Element, version NSN4XX2M0_SE B1.1.000 J6, certified under EUCC as EUCC-3110-2026-2500173-01. The Certification Report [CR], Security Target and the Evaluation Technical Report from EUCC-3110-2026-2500173-01 were the baseline for this subsequent maintenance activity, identified as EUCC-3110-2026-2500173-01-M-01.

A developer provided [IAR] was received, describing:

- (i) the changes made to the certified TOE,
- (ii) the evidence updated as a result of the changes and
- (iii) the security impact of the changes.

The [IAR] was supported by the evaluator's assessment [EA].

2.2 Description of changes to the product

The TOE is a secure microcontroller hardware platform together with its IC Dedicated Software.

The changes to the certified product as described in the [IAR] were assessed as only related to a HW update to functionality outside the TOE boundary that does not affect the TOE implementation, the introduction of an additional TOE SW configuration and guidance updates related to these changes. As a result, the new Security Target [ST] covers one new HW version and two SW configurations, resulting in three new TOE versions.

The update to the TOE was classified as minor changes with no impact on security. This update to the TOE was classified by developer [IAR] and original evaluator [EA] as minor changes with no impact on security.

Configuration Management procedures required a change in the product identifier. Therefore, the name was modified to NXP NSN4XX2M0 Series - Secure Element, versions NSN4XX2M0_SE B1.1.000 J6, NSN4XX2M0_SE B1.1.000 T0, NSN4XX2M0_SE B2.1.000 T0 to include the updated hardware component. An update of the guidance documentation was needed to reflect the new TOE configurations and reflect other minor changes.

The configuration list for the TOE has been updated as a result of the changes to include the updated Security Target [ST].

2.3 Affected developer evidence

The list of affected developer evidence is listed in [DEV_DOCS] together with the updated [ST] and [ST-Lite]. The configuration list for the TOE has been updated as a result of the changes and the following TOE guidance has been also updated:

Identifier	Version
NSN4XX2M0_SE Information on Guidance and Operation	Revision 1.2
NSN4XX2M0 Integration manual, UM10955	Revision 1.3
NSN4XX2M0_SE TOE Identification, AD00091	Revision 1.5
NSN4XX2M0_SE Programmer's Manual, Application Note, RM00308	Revision 1.03

3 Conclusion

Consideration of the nature of the changes leads to the conclusion that they can be classified as minor changes and that certificate maintenance is the correct path to continuity of assurance.

The resistance to attacks has not been re-assessed in the course of this maintenance process. Therefore, the assurance as outlined in the Certification Report *[CR]* is maintained for this version of the product.
