### 1 Executive Summary

This report is intended to assist the end-user of this product and any security certification Agent for that end-user in determining the suitability of this Information Technology (IT) product in their environment. End-users should review both the Security Target (ST), which is where specific security claims are made, in conjunction with this Validation Report (VR), which describes how those security claims were evaluated and any restrictions on the evaluated configuration. Prospective users should carefully read the Validator Comments in Section 10.

This report documents the National Information Assurance Partnership (NIAP) assessment of the evaluation of the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5. It presents the evaluation results, their justifications, and the conformance results. This Validation Report is not an endorsement of the Target of Evaluation (TOE) by any agency of the U.S. Government and no warranty of the TOE is either expressed or implied. This Validation Report applies only to the specific version and configuration of the product as evaluated and documented in the Security Target.

The evaluation of the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 was performed by the CAFÉ Laboratory of COACT Incorporated, the Common Criteria Testing Laboratory, in Columbia, Maryland USA and was completed in December 2010.

The information in this report is largely derived from the Security Target (ST), Evaluation Technical Report (ETR) and associated test report. The ST was written by Apex Assurance Group, LLC of Palo Alto, California for McAfee, Inc. The ETR and test report used in developing this validation report were written by COACT. The evaluation was performed to conform to the requirements of the Common Criteria for Information Technology Security Evaluation, Version 3.1 R2, dated September 2007 at Evaluation Assurance Level 2 (EAL 2) augmented with ALC\_FLR.2 and the Common Evaluation Methodology for IT Security Evaluation (CEM), Version 3.1 R2, dated September 2007. The product, when configured as specified in the installation guides and user guides, satisfies all of the security functional requirements stated in the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 Security Target. The evaluation team determined the product to be both Part 2 Conformant and Part 3 Augmented, and meets the assurance requirements of EAL 2 with ALC\_FLR.2. All security functional requirements are derived from Part 2 of the Common Criteria.

The TOE is an agent-based, purpose-built IT policy audit application that leverages the XCCDF and OVAL security standards to automate the processes required for internal and external IT audits. McAfee Policy Auditor evaluates the status of managed systems relative to audits that contain benchmarks. Benchmarks contain rules that describe the desired state of a managed system. Benchmarks are distributed with the TOE or imported into McAfee Benchmark Editor and, once activated, can be used by Policy Auditor. Benchmarks are written in the open-source XML standard formats Extensible Configuration Checklist Description Format (XCCDF) and the Open Vulnerability Assessment Language (OVAL). XCCDF describes what to check while OVAL specifies how to perform the check.

ePO provides the user interface for the TOE via a GUI accessed from remote systems using web browsers. The ePO web dashboard represents policy compliance by benchmark. Custom reports can be fully automated, scheduled, or exported. ePO requires users to identify and authenticate themselves before access is granted to any data or management functions. Audit records are generated to record configuration changes made by users. The audit records may be reviewed via the GUI.

Based upon per-user permissions, users may configure the systems to be audited for policy compliance (the "managed systems") along with the benchmarks to be checked. The Policy Auditor Agent Plug-In executing on the managed systems performs the policy audit and returns the results to Policy Auditor. Policy Auditor allows you to conduct policy audits on various releases of the following operating systems (See Section 5 below):

- Microsoft Windows
- Macintosh OS X
- HP-UX
- Solaris
- Red Hat Linux
- AIX

Users can review the results of the policy audits via ePO. Access to this information is again limited by per-user permissions.

Communication between the distributed components of the TOE is protected from disclosure and modification by cryptographic functionality provided by the operational environment.

#### 2 Identification

The CCEVS is a joint National Security Agency (NSA) and National Institute of Standards and Technology (NIST) effort to establish commercial facilities to perform trusted product evaluations. Under this program, commercial testing laboratories called Common Criteria Testing Laboratories (CCTLs) using the Common Evaluation Methodology (CEM) for Evaluation Assurance Level (EAL) 1 through EAL 4 in accordance with National Voluntary Laboratory Assessment Program (NVLAP) accreditation conduct security evaluations.

The NIAP Validation Body assigns Validators to monitor the CCTLs to ensure quality and consistency across evaluations. Developers of information technology (IT) products, desiring a security evaluation, contract with a CCTL and pay a fee for their product's evaluation. Upon successful completion of the evaluation, the product is added to NIAP's Validated Products List.

Table 1 provides information needed to completely identify the product, including:

- The Target of Evaluation (TOE): the fully qualified identifier of the product as evaluated;
- The Security Target (ST), describing the security features, claims, and assurances of the product;
- The conformance result of the evaluation;
- The Protection Profile to which the product is conformant (if any); and
- The organizations and individuals participating in the evaluation.

**Table 1: Evaluation Identifiers** 

Item	Identifier
Evaluation Scheme	United States NIAP Common Criteria Evaluation and Validation Scheme
Target of Evaluation	McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5
Protection Profile	None
Security Target	McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 Security Target, Version 2.0.2, February 2, 2011
Dates of evaluation	February 16, 2009 through December 2010
Evaluation Technical Report	Evaluation Technical Report for the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5, Document No. F2-0211-001, February 4, 2011
Conformance Result	Part 2 conformant and EAL2 Part 3 augmented with ALC_FLR.2
Common Criteria version	Common Criteria for Information Technology Security Evaluation Version 3.1R2, September 2007 and all applicable NIAP and International Interpretations effective on December 19, 2008
Common Evaluation Methodology (CEM) version	CEM version 3.1R2 dated September 2007and all applicable NIAP and International Interpretations effective on February 16, 2009
Sponsor	McAfee, Inc., 3965 Freedom Circle, Santa Clara, California 95054
Developer	McAfee, Inc., 3965 Freedom Circle, Santa Clara, California 95054
Common Criteria Testing Lab	COACT Inc. CAFÉ Labs, Columbia, MD
Evaluators	Bob Roland, Greg Beaver, Pascal Patin and Brian Pleffner
Validation Team	Dr. Jerome Myers and Mike Allen of The Aerospace Corporation

### 2.1 Applicable Interpretations

The following NIAP and International Interpretations were determined to be applicable when the evaluation started.

#### **NIAP Interpretations**

 $I\text{-}0418-Evaluation of the TOE \ Summary \ Specification: Part \ 1\ Vs\ Part \ 3$ 

I-0426 – Content of PP Claims Rationale

I-0427 – Identification of Standards

#### **International Interpretations**

None

### **3** Security Policy

The security requirements enforced by the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 were designed based on the following overarching security policies:

- Policy Audits. The TOE audits managed systems to determine policy compliance on those systems. Results of the policy audits are stored in the database (the DBMS is in the IT Environment), and reports based upon completed policy audits may be retrieved via the GUI interface or by generating SCAP-conformant XML files to be shared with external systems.
- Identification. On the management system, the TOE requires users to identify and authenticate themselves before accessing the TOE software. User accounts must be defined within ePO, but authentication of the user credentials is performed by Windows. No action can be initiated before proper identification and authentication. Each TOE user has security attributes associated with their user account that defines the functionality the user is allowed to perform. On the management system and all managed systems, I&A for local login to the operating system (i.e., via a local console) is performed by the local OS (IT Environment).
- Management. The TOE's Management Security Function provides support functionality that enables users to configure and manage TOE components. Management of the TOE may be performed via the GUI. Management privileges are defined per user.
- **Audit.** The TOE's Audit Security Function provides auditing of management actions performed by administrators. Authorized users may review the audit records via ePO.
- **System Information Import.** The TOE may be configured to import information about systems to be managed from Active Directory (LDAP servers) or NT domain controllers. This functionality ensures that all the defined systems in the enterprise network are known to the TOE and may be configured to be managed.
- **SCAP Data Exchange.** The TOE imports and exports SCAP benchmark assessment data. This functionality ensures that the assessments remain current as new benchmarks are developed and allows custom-designed benchmarks in the TOE to be made available to other systems.

### 4 Assumptions and Clarification of Scope

The assumptions in the following paragraphs were made during the evaluation of McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5.

#### 4.1 Personnel Security Assumptions

- There will be one or more competent individuals assigned to manage the TOE and the security of the information it contains.
- The authorized administrators are not careless, wilfully negligent or hostile, and will follow and abide by the instructions provided by the TOE documentation.

### 4.2 Physical Security Assumptions

- The TOE hardware and software critical to security policy enforcement will be protected from unauthorized physical modification.
- The processing resources of the TOE will be located within controlled access facilities, which will prevent unauthorized physical access.

### 4.3 Environmental Assumptions

- The TOE has access to all the IT System data it needs to perform its functions.
- The TOE will be managed in a manner that allows it to appropriately address changes in the IT System the TOE monitors.
- The TOE is appropriately scalable to the IT System the TOE monitors.
- Access to the database used by the TOE via mechanisms outside the TOE boundary is restricted to use by authorized users.

### 4.4 Clarification of Scope

All evaluations (and all products) have limitations, as well as potential misconceptions that need clarifying. This text covers some of the more important limitations and clarifications of this evaluation. Note that:

• The assumptions about the underlying operating system mean that to achieve true EAL 2 level of assurance for the complete McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 system, the operating system and underlying hardware need to be evaluated at or above the EAL 2 level of assurance.

- There can be no other applications or servers running on the operating system or hardware platform used to support the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5.
- The process to track flaws and updates may require purchase of a Service Level Agreement (See the Validator's Comments, Section 10 below, for further details).

#### 5 Architectural Information

The TOE consists of a set of software applications. The hardware, operating systems and all third party support software (e.g., DBMS) on the systems on which the TOE executes are excluded from the TOE boundary.

The platform on which the ePO, Policy Auditor and Benchmark Editor software is installed must be dedicated to functioning as the management system. ePO operates as a distribution system and management system for a client-server architecture offering components for the server part of the architecture (not the clients). The TOE requires the following hardware and software configuration on this platform.

COMPONENT	MINIMUM REQUIREMENTS
Processor	Intel Pentium III-class or higher; 1GHz or higher
Memory	1 GB RAM
Free Disk Space	1 GB
Monitor	1024x768, 256-color, VGA monitor or higher
Operating System	Windows Server 2003 Enterprise with Service Pack 1 or
	later
	Windows Server 2003 Standard with Service Pack 1 or later
	Windows Server 2003 Web with Service Pack 1 or later
	Windows Server 2003 R2 Enterprise
	Windows Server 2003 R2 Standard
	Windows Server 2008 Enterprise
	Windows Server 2008 Standard
	Current security updates
DBMS	Microsoft SQL Server 2005
	Microsoft SQL Server 2008
Additional Software	MDAC 2.8
	MSI 3.1
	Apache 2.0.54.0
	Tomcat 5.5.25
	Sun JRE 1.6.0_06
	RSA SSL-J 4.1.4
	RSA Crypto-J 3.3.4_01
	RSA Cert-J 2.0.3
Network Card	Ethernet, 100Mb or higher
Disk Partition Formats	NTFS
Domain Controllers	The system must have a trust relationship with the Primary
	Domain
	Controller (PDC) on the network

The McAfee Agent and Policy Auditor Agent Plug-In execute on one or more systems whose policy settings are to be audited. The supported platforms for these components are:

SUPPORTED AGENT OS	PLATFORM
Windows 2000 Server with SP 1, 2, 3, or 4	X86 platforms
Windows 2000 Advanced Server with SP 1, 2, 3,	X86 platforms
or 4	
Windows 2000 Professional with SP 1, 2, 3, or 4	X86 platforms
Windows XP Professional with SP1	X86 and X64 platforms
Windows Server 2003 Standard Edition	X86 and X64 platforms
Windows Server 2003 Enterprise Edition	X86 and X64 platforms
Windows Vista	X86 and X64 platforms
Windows 2008 Server	X86 and X64 platforms
Mac OS X 10.4	X86 and X64 platforms,
	PowerPC
Mac OS X 10.5	X86 and X64 platforms,
	PowerPC
HP-UX 11i v1	RISC
HP-UX 11i v2	RISC
Solaris 8	SPARC
Solaris 9	SPARC
Solaris 10	SPARC
Red Hat Linux AS, ES, WS 4.0	X86 and X64 platforms
Red Hat Enterprise Linux 5.0, 5.1	X86 and X64 platforms
AIX 5.3 (TL8 of later) and AIX 6.1	Power 5

The minimum hardware requirements for the agent platforms are specified in the following table:

COMPONENT	MINIMUM HARDWARE REQUIREMENTS
Memory	20MB RAM
Free Disk Space	80MB
Network Card	Ethernet, 10Mb or higher

The management system is accessed from remote systems via a browser. The supported browsers are Microsoft Internet Explorer 6.0 with Service Pack 1 or later or Microsoft Internet Explorer 7.0.

The TOE relies on Windows to authenticate user credentials during the logon process. User accounts must also be defined within ePO in order to associate permissions with the users.

#### 6 Documentation

This section provides a complete listing of the IT product documentation provided with the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 by the developer to the consumer or available from McAfee on their web site. All of this documentation was evaluated as part of the product evaluation.

- 1. McAfee ePolicy Orchestrator 4.5 Product Guide
- 2. McAfee ePolicy Orchestrator 4.5 Installation Guide
- 3. McAfee Benchmark Editor 5.2.0 Product Guide for ePO 4.5
- 4. McAfee Policy Auditor 5.2.0 Product Guide for ePolicy Orchestrator 4.5
- 5. McAfee Policy Auditor 5.2.0 Installation Guide

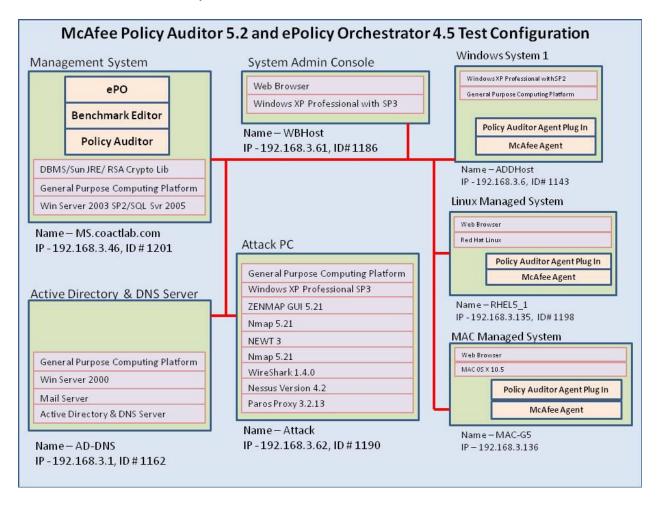

### 7 IT Product Testing

Testing was completed on December 28, 2010 at the COACT CCTL in Columbia, Maryland. COACT employees performed the tests.

#### 7.1 Evaluator Functional Test Environment

Testing was performed on the following test bed configuration.

The following figure graphically displays the test configuration used for functional testing. The evaluator test configuration is equivalent to the vendor test setup. The evaluator test setup also includes the Active Directory/DNS.

An overview of the purpose of each of these systems is provided in the following table.

System	Purpose
Management System	This system provides the management functionality for the TOE. The system includes the ePO, Benchmark Editor, and Policy Auditor. The Microsoft SQL Server is installed to provide the database storage.
Windows System 1	This system hosts the Policy Auditor Agent Plugin and the McAfee Agent for the Windows OS environment. The agents will scan the system for vulnerabilities.
Linux Managed System	This system hosts the Policy Auditor Agent Plugin and the McAfee Agent for the Linux OS environment. The agents will scan the system for vulnerabilities.
MAC Managed System	This system hosts the Policy Auditor Agent Plugin and the McAfee Agent for the MAC OS environment. The agents will scan the system for vulnerabilities.
Attack PC	This system provides the attack and penetration test tools.
Active Directory & DNS Server	This system provides the Active Directory and Domain Name System (DNS) infrastructure for the testing. The mail server is also installed on this PC.
System Admin Console	The management system is accessed from the System Admin Console via a browser.
Switch	Not shown in the figure above, but included in the test configuration is a NetGear GS716T switch that will be used to connect the different systems on the network.

Specific configuration details for each of the systems are provided in the tables below.

Management System Requirements		
Processor	Intel Pentium 2.8 G	
Memory	2 GB RAM	
Disk Space	75 GB	
Operating System	Windows Server 2003 SP2	
DBMS	Microsoft SQL Server 2005	

Additional	MDAC 2.8
Software	MSI 3.1
	Apache 2.0.54.0
	Tomcat 5.5.25
	Sun JRE 1.6.0_06
	RSA SSL-J 4.1.4
	RSA Crypto-J 3.3.4_01
	RSA Cert-J 2.0.3
Network Card	Ethernet
Disk Partition Formats	NTFS

Managed System 1 Requirements	
Operating System	Windows Server 2003 SP2
Additional Software	N/A
Network Card	Ethernet
Disk Partition Formats	NTFS

### Attack PC Details

Item	Purpose
Installed	Windows XP Professional SP3
software	Internet Explorer 6.0 SP1or later
	WinZip 10
	ZENMAP GUI 5.21
	Nmap 5.21 NEWT 3 SnagIt 8 WireShark 102 Nessus Version 4.2
	Paros Proxy 3.2.13 Open Office Version 3.2.1

#### Active Directory & DNS Server Details

Item	Purpose
Installed	Microsoft Windows 2000 Server SP4
software	Mail Enable Standard Edition Version 1.986.0.0

#### System Admin Console PC Details

Item	Purpose
Installed	Windows XP Professional with SP3
software	Microsoft Internet Explorer 7
	Open Office Version 3.2.1
	Snagit Version 1.4
	Adobe Reader Version 9.4

#### MAC Managed System

Item	Purpose
Installed	MAC OS X 10.5
software	

#### Linux Managed System

Item	Purpose
Installed	Red Hat Enterprise Linux Version 5.1
software	

#### 7.2 Functional Test Results

The repeated developer test suite includes all of the developer functional tests. Additionally, each of the Security Function and developer tested TSFI are included in the CCTL test suite. Results are found in the E2-0910-002(3) McAfee Policy Auditor Evaluation Test Report, dated December 28, 2010.

#### 7.3 Evaluator Independent Testing

The tests chosen for independent testing allow the evaluation team to exercise the TOE in a different manner than that of the developer's testing. The intent of the independent tests is to give the evaluation team confidence that the TOE operates correctly in a wider range of conditions than would be possible purely using the developer's own efforts, given a fixed level of resource. The selected independent tests allow for a finer level of granularity of testing compared to the developer's testing, or provide additional testing of functions that were not exhaustively tested by the developer. The tests allow specific functions and functionality to be tested. The tests reflect knowledge of the TOE gained from performing other work units in the

evaluation. The test environment used for the evaluation team's independent tests was identical with the test configuration used to execute the vendor tests.

#### 7.4 Evaluator Penetration Tests

The evaluator examined each of the obvious vulnerabilities identified during the developer's vulnerability analysis. After consulting the sources identified by the developer used during the initial vulnerability analysis, the evaluator examined sources of information publicly available to support the identification of possible potential vulnerabilities in the TOE. The evaluator searched the Internet for potential vulnerabilities in the TOE using the web sites listed below. The evaluator searched the Internet for potential vulnerabilities in the TOE using the web sites listed below. The sources of the publicly available information are provided below.

- A) <a href="http://cve.mitre.org">http://cve.mitre.org</a>
- B) <a href="http://google.com">http://google.com</a>
- C) <a href="http://osvdb.org/">http://osvdb.org/</a>
- D) <a href="http://www.securityfocus.com/">http://www.securityfocus.com/</a>
- E) <a href="http://secunia.com/">http://secunia.com/</a>
- F) http://www.us-cert.gov
- G) <a href="http://securitytracker.com/">http://securitytracker.com/</a>
- H) http://web.nvd.nist.gov
- I) <a href="http://www.cvedetails.com/">http://www.cvedetails.com/</a>

The evaluator performed the public domain vulnerability searches using the following key words.

- A) McAfee
- B) McAfee 5.2
- C) McAfee Policy Auditor
- D) Policy Auditor
- E) Policy Auditor Agent
- F) Benchmark
- G) Benchmark Editor
- H) McAfee Benchmark Editor
- I) McAfee Agent
- J) ePolicy
- K) ePolicy Orchestrator
- L) McAfee ePolicy Orchestrator 4.5

After verifying that the developer's analysis approach sufficiently included all of the necessary available information regarding the identified vulnerabilities, the evaluator made an assessment of the rationales provided by the developer indicting that the vulnerability is non-exploitable in the intended environment of the TOE.

While verifying the information found in the developer's vulnerability assessment the evaluators conducted a search to verify if additional obvious vulnerabilities exist for the TOE. Additionally, the evaluator examined the provided design documentation and procedures to attempt to identify any additional vulnerabilities.

The evaluator determined that the rationales provided by the developer indicate that the vulnerabilities identified are non-exploitable in the intended environment of the TOE.

## **8** Evaluated Configuration

The evaluated configuration, as defined in the Security Target, is McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 running on the following platforms:

COMPONENT	MINIMUM REQUIREMENTS
Processor	Intel Pentium III-class or higher; 1GHz or higher
Memory	1 GB RAM
Free Disk Space	1 GB
Monitor	1024x768, 256-color, VGA monitor or higher
Operating System	Windows Server 2003 Enterprise with Service Pack 1 or
	later
	Windows Server 2003 Standard with Service Pack 1 or later
	Windows Server 2003 Web with Service Pack 1 or later
	Windows Server 2003 R2 Enterprise
	Windows Server 2003 R2 Standard
	Current security updates
DBMS	Microsoft SQL Server 2005
	Microsoft SQL Server 2008
Additional Software	MDAC 2.8
	MSI 3.1
	Apache 2.0.54.0
	Tomcat 5.5.25
	Sun JRE 1.6.0_06
	RSA SSL-J 4.1.4
	RSA Crypto-J 3.3.4_01
	RSA Cert-J 2.0.3
Network Card	Ethernet, 100Mb or higher
Disk Partition Formats	NTFS
Domain Controllers	The system must have a trust relationship with the Primary
	Domain
	Controller (PDC) on the network

The McAfee Agent and Policy Auditor Agent Plug-In execute on one or more systems whose policy settings are to be audited. The supported platforms for these components are:

SUPPORTED AGENT OS	PLATFORM
Windows 2000 Server with SP 1, 2, 3, or 4	X86 platforms
Windows 2000 Advanced Server with SP 1, 2, 3,	X86 platforms
or 4	
Windows 2000 Professional with SP 1, 2, 3, or 4	X86 platforms
Windows XP Professional with SP1	X86 and X64 platforms
Windows Server 2003 Standard Edition	X86 and X64 platforms
Windows Server 2003 Enterprise Edition	X86 and X64 platforms
Windows Vista	X86 and X64 platforms

SUPPORTED AGENT OS	PLATFORM
Windows 2008 Server	X86 and X64 platforms
Mac OS X 10.4	X86 and X64 platforms,
	PowerPC
Mac OS X 10.5	X86 and X64 platforms,
	PowerPC
HP-UX 11i v1	RISC
HP-UX 11i v2	RISC
Solaris 8	SPARC
Solaris 9	SPARC
Solaris 10	SPARC
Red Hat Linux AS, ES, WS 4.0	X86 and X64 platforms
Red Hat Enterprise Linux 5.0, 5.1	X86 and X64 platforms
AIX 5.3 (TL8 of later) and AIX 6.1	Power 5

### **9** Results of the Evaluation

The evaluator devised a test plan and a set of test procedures to test the TOE's mitigation of the identified vulnerabilities by testing the product for selected developer identified vulnerabilities.

The evaluation determined that the product meets the requirements for EAL 2. The details of the evaluation are recorded in the Evaluation Technical Report (ETR), which is controlled by COACT Inc.

#### 10 Validator Comments/Recommendations

The validation team's observations support the evaluation team's conclusion that the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 meets the claims stated in the Security Target. The validation team also wishes to add the following clarification about the use of the product.

• For user's who wish to report or monitor flaws, a Knowledge Base (KB) article is posted to McAfee's public support website. Users may access the KB articles without purchasing a support agreement. For customers who chose to purchase a support agreement, proactive notification will be provided based on their paid support level and corresponding SLA (i.e, Gold, Gold Select, Platinum, or Platinum Select). Note that Policy Auditor is an enterprise product and it is sold with a minimum of 12 months of Gold level support by default. Should the support agreement lapse beyond its term, the customer may at their discretion access the McAfee public support website to review relevant KB articles for their particular product(s).

### 11 Security Target

The Security Target is identified as the McAfee Policy Auditor 5.2 and ePolicy Orchestrator 4.5 Security Target, Version 2.0.2, February 2, 2011. The document identifies the security functional requirements (SFRs) that are levied on the TOE, which are necessary to implement the TOE security policies. Additionally, the Security Target specifies the security assurance requirements necessary for EAL 2 augmented with ALC\_FLR.2.
