Informationstechnik**

SOGIS
Recognition Agreement

The Protection Profile identified in this report was assessed according to the *Assurance Continuity: CCRA Requirements*, version 2.1, June 2012 and the Impact Analysis Report (IAR). The baseline for this assessment was the Certification Report, the Protection Profile and the Evaluation Technical Report of the Protection Profile certified by the Federal Office for Information Security (BSI) under BSI-CC-PP-0098-V3-2021.

The change to the certified Protection Profile is at the level of functional scope reduction. The change has no effect on assurance. The identification of the maintained Protection Profile is indicated by a new version number compared to the certified Protection Profile.

Consideration of the nature of the change leads to the conclusion that it is classified as a minor change and that certificate maintenance is the correct path to continuity of assurance.

This report is an addendum to the Certification Report BSI-CC-PP-0098-V3-2021.

Recognition Arrangement

Bonn, 5 May 2022

The Federal Office for Information Security

Assessment

The Protection Profile identified in this report was assessed according to the *Assurance Continuity: CCRA Requirements* [1] and the Impact Analysis Report (IAR)¹. The baseline for this assessment was the Certification Report of the certified Protection Profile [2] and the Evaluation Technical Report as outlined in [2].

The author of the Common Criteria Protection Profile Schutzprofil 2: Anforderungen an den Konnektor, BSI-CC-PP-0098, V1.6, BSI, submitted an IAR to the BSI for approval. The IAR is intended to satisfy the requirements outlined in the document *Assurance Continuity: CCRA Requirements* [1]. In accordance with those requirements, the IAR describes the changes made to the certified Protection Profile.

The Protection Profile Schutzprofil 2: Anforderungen an den Konnektor, BSI-CC-PP-0098, V1.6 was changed due to the removal of mandatory support for S/MIME in the appropriate specification. AES with a 128 bit key length was removed from the requirements of the Anwendungskonnektor leaving only support for 256 bit keys as there was no equivalent requirement in the specification. Furthermore, editorial changes have been made.

Conclusion

The change to the Protection Profile is at the level of functional scope reduction and reflects the changes to the specification that products certified on the basis of this Protection Profile must adhere to. The change has no effect on assurance.

Consideration of the nature of the change leads to the conclusion that it is classified as a minor change and that certificate maintenance is the correct path to continuity of assurance.

Therefore, BSI agrees that the assurance as outlined in the Certification Report [2] is maintained for this version of the Protection Profile [3].

This report is an addendum to the Certification Report [2].
